White Frost Refrigerators

The handsomest, the best and the **ONE** Refrigerator that is absolutely sanitary.

The Refrigerator that has set the people wild in its praise—and it "delivers the goods."

Made Entirely of Metal—not a splinter of wood in its construction. It cannot warp, swell or decay—Will last a lifetime.

Absolutely Sanitary. No nasty corners, cracks or crevices for germs and dirt to gather. All food is preserved sweet and wholesome—without taint nor odor—The "White Frost" is the protector and defender of the family health.

Round in Shape with revolving and quickly removable shelves, it can be thoroughly cleaned in a few minutes and kept clean.

Economical of Ice. Refrigeration is on natural and scientific lines. Guaranteed to maintain an equable, cool, dry temperature in the hottest weather.

A satisfactory record of five years demonstrates why the dealer who sells the **"White Frost"** always has the Refrigerator trade of his city.

Enamelled in Pure White without and within. Trimmings of solid brass, perfect lock, ball-bearing castors. A handsome piece of furniture that at once attracts the housewife.

The demand is big. Get orders to us promptly.
Catalogue on request. Send for it to-day.

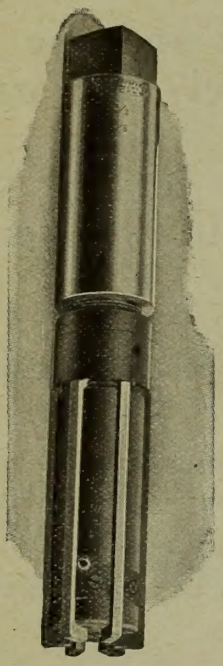
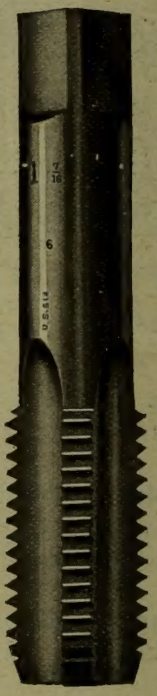
SMALL TOOLS



Dealers, Attention :—

We have on hand a large stock of Pratt & Whitney eccentric relief reamers and taps. We would like to move a large proportion of them before our annual stock taking.

We are prepared to make special inducements to dealers who will put in a stock of these tools. They are always in demand by the high class trade and will be a good investment for you.



NOW IS YOUR OPPORTUNITY

We make this announcement advisedly having obtained our information from authoritative sources. **The Prices of Small Tools are to be advanced during the coming year.** Take advantage of the low prices and special inducements and assure yourself of a much higher percentage than you will be able to get next year.

The Pratt & Whitney Small Tools are of the most excellent design and material. Tests have shown them far superior to anything else on the market.

Let us send you our proposition.

No. 461 Gillette Set

Nearly 3,000,000

Gillette Safety Razors are now used daily by the same number of satisfied men. Gillette Safety Razors are the best selling hardware specialty that has ever appeared. These razors have become as staple an article as hammers or two-foot rules in many hardware stores. The "New Process" blades made of improved steel and with improved temper and finish, require no honing and no stropping. 17,000,000 of these blades were sold during the first month they were on the market.

Are you handling Gillette Safety Razors?

Are you pushing their sale?

If not you should, for you are missing an opportunity to make money. They are easy to sell and liberal supplies of advertising matter are given away to promote sales.

Montreal and Winnipeg

Get After the Milkmen and Dairymen of Your Town and District. Here is a Line That is New and Specially Perfected for the Country Trade. We Want the Up-to-Date Hardwaremen to Handle this Money-Making Milk Can.

What is in Your Milk Pitcher? Leading Editorial, Montreal Daily Star, Dec. 2, 1908.

The Main Defect of Milk Cans is in Their Construction.

Inspector's Report, Montreal Standard, Nov. 28, 1908.

Heed the Report of S. M. Barre, on the Milk Inspection published in "The Montreal Standard," Nov. 28th, 1908, which says :

"The main defect of milk cans is in their construction. They are made of too light material and are put together in such a way as to soon "become uncleanable. It seems as if their upper joints were made on purpose for gathering milk and putrefaction. In many cans we find a "crease in the upper joints. As a rule, the opening is too narrow, and very few of the covers are soldered so as to make them properly cleanable."

CHANGE YOUR MILK CANS ☞ AT ONCE ☜

The Public Demands This. ***The Authorities Will Enforce It.***

BUY THE "PERFECT" MILK CAN

Only One Piece Can on the Market.—Pressed out of one piece of steel plate.

No seams—Completely smooth on the inside—Rounded corners—No crevices for dirt and bacillus to collect—Exceedingly easy to clean.
Unexcelled in Durability. Tinned three times. Money-Saving. Patented world over.
Used in the finest Dairies in all countries.
The only can awarded "Grand Prix" at the Franco-British Exhibition, 1908.
Made in sizes from one quart to 10 gallons Imperial measure, in one piece.
Place your orders now for Spring.

To-day is the day to write for Catalogue and get the agency at the same time. Will send a sample can at your request.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from Wholesalers, Manufacturers and Retail Dealers, who usually intimate they have ooked through Hardware and Metal, but cannot find any firm advertising the line in question. In the majority of cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay them to advertise in larger space.

Do You Want Anything ?

Try a Condensed Ad. in Hardware and Metal, it will get you what you want. Two cents a word first insertion, one cent a word each subsequent insertion.

THE NEW SKATE

Ounces lighter than any other—and stronger

IT'S just possible you have noticed that the skate you were selling largely last season was a very antiquated proposition; that it might be made lighter and just as strong.

The "Automobile" Skate fulfils this idea. It's as far ahead of the present day skate as an automobile is ahead of the old-time buggy.

Lighter by many ounces than any other made and stronger.

It has an aluminum alloy top the metals just mixed to a point where they combine to make a material as strong as steel and five times as light. The "Automobile" Skate has also a thin blade of nickel steel—the toughest, strongest tempered metal on the market.

The Argument

FIGURE it out this way: Every slide of a skate takes you forward something over four feet while the other skate is lifted and held above the ice. Suppose a person goes ten miles around a rink—which distance is easily covered by most anyone skating to music—he has covered 52,800 feet and lifted either one skate or the other 13,200 times. We say that the "Automobile" Skate is, at the lowest figure, six ounces lighter than any other made. Figuring that out, we find that he has actually lifted 4,888 pounds less than he would were he using any other skates.

THE KNOCKER

He's Undesirable, but Preferable to the Blocker

The Knocker is a much criticized individual,
But he at least keeps some heads
Natural size. The Blocker is a pessimist who says,
"It cannot be. There's nothing new.
"Originality died years ago."

Tut! Tut! some of us
Still rack our brains
That we may the better
Serve our customers.
Not satisfied to merely
Take the order on a
Yesterday, To-day and
Forever basis.

McClary—there's a name
That spells "Go-aheadness."
Sixty-one years of up and doing—
Growing, growing, growing—
Bigger, Brighter, Better.

Hitched to "Famous" and
Located on a stove,
Furnace or enamelware,
It means a sale
For someone—You.

Just think of the
Opportunities for 1909
You will have with
"Pandora" Range alone.
There will be at least
Three New Exclusive Features
On this range—More sales
Well! That's an easy guess.

Don't have to even put
Your shoulder to the wheel.
Our advertising does that for you.
Just store in a goodly measure
Of enthusiasm—infuse into your
Clerks, your patrons—
Talk "Famous McClarys"
Wherever you go.

There's some goods that
You'll need right soon
The McClary man is ready
But if you're in an extra hurry
Use that little post card
In the mail outfit—
Then say, "It's up to you."

An Unbreakable Fence

The "DILLON" HINGE STAY FIELD FENCE

is the only wire fence on the market embodying the hinge-stay principle. In the Dillon, the upright stay wires are hinged to the laterals. Thus, when any weight strikes the fence the wires do not bend or break as with ordinary wire fences, but merely "give" at the hinges. When the weight is removed the Dillon springs back to position absolutely uninjured. It's worth while handling a fence like the "Dillon."

Richardson, Essex, and J. R. McMillan, Guelph, executive committee; Weston Wrigley, Toronto, secretary.

MORE FIRMS TO EXHIBIT.

During the past week the Lufkin Rule Co., of Canada, Windsor, and the Standard Paint of Canada, Montreal, arranged to make exhibits at the big convention of the Ontario Retail Hardware and Stove Dealers' Association at Hamilton, on Feb. 9, 10 and 11.

Another feature developing is the expressed intention of some of the firms whose travelers will be on hand to give out small souvenirs to the members of the association in attendance. The association executive has ordered a large supply of handsome badges worth about half a dollar each and having a distinctively hardware design, and this, along with the reminders supplied by manufacturers will make interesting mementos of the convention.

WHERE ORGANIZATION HELPS.

The carrying over of stock from one year to another is a problem with every merchant and one that is generally conceded to be a very stiff one. The National Retail Hardware Bulletin believes that merchants generally do not do enough business in proportion to the size of the stock they carry, contending it is often the case that a merchant would not need a whit larger stock to do a third or a half more business. Where this is the case they are losing money on the depreciation of carried-over stock and losing the distinction of having a modern store.

Suppose the cost of advertising special sales does absorb all the profits on such a house cleaning; a lot of goods will be gone that would otherwise have been carried over and ultimately sold for considerable less. Moreover this old stock takes up room on your shelves that should be occupied by up-to-date goods.

It is a false theory to imagine that the buying public has not a pretty good idea of what class of stock you have on your shelves, and there are few things that aid the invasion of catalog houses more than the fact that retail merchants do not carry a sufficient assortment of modern things that are made so prominent in the big catalogues.

The time is coming, unless merchants awaken from the lethargy in which they have so long been enthralled, when they will have to increase their advertising appropriations, not in order to build up business, but for self preservation and to get trade already lost. It must be borne in mind that if people cannot get the newest and most modern things in your store they are going to go somewhere else for them.

Every time you clean out old stock to make room for new you are making your customers realize that your business is essentially modern and that you are very apt to have just what they want. Every piece of goods you carry over is a nail in the reputation of your store for moderness. All these facts considered it is indeed hard to see how any merchant, observing the extent of mail order house efforts, can remain blind to the necessity of using every means at his command to counteract it.

FOOLISHNESS OF PRICE-CUTTING

A great many travelers who claim they are salesmen have none of the qualifications for such a position, and some of them cannot even be classed as high as "order taker." The "order taker" books what business he can find at the regular prices, but the man who grades lower than the "order taker" is the man who cuts prices.

He gets business. His order book will show that, but at what profit to the house? Many such men are absolutely unable to show any net profit to their house, and under such circumstances they are worse than useless to that house.

The man who depends on cutting prices to sell goods admits that he is no salesman. If he were a salesman he could sell the goods at the same price the customer had been paying for them. A lower price than a competitor, on the same goods, is not only an admission that the man making the cut is a poor salesman, but that his house is a back number for employing him.

An order taken from a retailer without profit does not bring you his future business unless you continue the unprofitable tactics. He merely makes it a point to use you to beat down prices. If the cut on one article on the order is made up by increasing the price of another, he will eventually find you out, and then you are worse off than before.

Every convention that is held by making, jobbing or retailing associations runs into the vexed question of price cutting at one time or another. It is to be hoped that a day will come when everybody will understand that "mutual advantage" is the goal of trade, and that there is no mutual advantage where one of the parties lose money on the transaction and where the whole industry is demoralized by reason of the price-cutting tactics of the seller.

NEED OF TRADE ORGANIZATIONS.

We are living in an age of organizations and associations, and they are found in all parts of the world. Progress and changed conditions have brought them about—have made them necessary.

Not so many years ago business was done by the individual or a partnership of individuals, but the company or corporation is rapidly replacing them, and the business signs of individuals or co-partnerships are constantly decreasing.

Business corporations, consisting of a greater number of individuals, are constantly increasing. Modern business methods, progress and incentive to do greater things have made this necessary as well as beneficial in many ways over old methods. We are agreed in this.

Now, if such association and co-operation are necessary and proper for the present conduct of business in individual concerns, is it not equally essential in a larger sense, as evidenced by the numerous trade associations? The associations represented here to-day are a manifestation of this necessity.

PRESTIGE.

Prestige is defined as the influence which arises from reputation. That being the case, it naturally follows that anything which effectively spreads a firm's good reputation is a direct aid to prestige. Most travelers prefer to work for a firm which has prestige with the trade. The very weight of a name often helps a good deal. All concerns which persistently advertise in a good trade newspaper have more or less of prestige with the trade; because the fact that a firm persistently advertises is convincing evidence to the retailer of that firm's progressiveness and prominence in the trade. No use talking; live trade newspaper advertising, does tend to make the travelers' path easier to tread!

What Good Roads Mean to the Retailer

Impassable Highways Divert Business From the Local Stores to the Mail Order Houses — How Merchants May Further Their Own Interests by Supporting Movement for Good Roads.

Whether the retailer in the country town realizes it or not, the question of good roads is one with which his interests are closely allied. It is quite possible that in the past the relationship between the extent of business in a town and condition of the roads leading to that town has not been fully understood, hence the apathy, or, at best, half-hearted sympathy exhibited by business men towards projects having for their object the systematic improvement of the roads.

Few subjects deserve such attention by the country merchant as that associated with providing good highways leading to the town in which he does business.

It must be obvious to every such merchant every time the roads are in a condition which prevents farmers' wives and daughters from coming to town, the opportunity of doing business which their presence there would afford is lost, and may it not be quite possible that some of the growth of the business done by city mail order houses with persons resident in the country may be traced more or less directly to the fact that poor roads make journeying to town a hardship to the women of the family, at least.

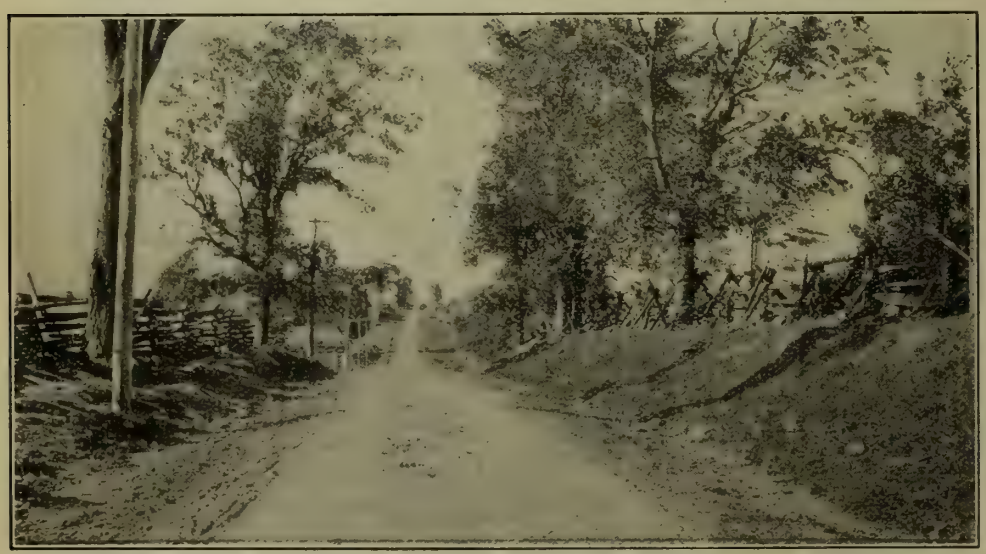
These are points in this question which have a direct bearing upon the business of the country retailer, and they seem to justify the statement that these retailers are under a responsibility to themselves to further to the extent of their ability any movement towards better roads which may be promulgated.

Fortunately for the retailer, though it must be confessed, most frequently without the active support from him which should have been accorded, a great deal has been done along this direction in Canada, and there are indications that in some quarters at least, the importance of this project in its local as well as national aspect, has been appreciated.

The direct benefit accruing to the retailer alone constitutes sufficient reason for his active interest in the good roads question, but there is an indirect benefit, which, after all, perhaps furnishes the strongest argument in favor of his support of this project.

Good roads mean more prosperous farmers. Every dollar spent in improvement of highways adds many dollars to the wealth of the farming community served by it, in the increased facilities which good roads afford for successful farming.

In the Summer this Road Will be Pleasant, but the Growth of Grass and Flat Character of the Roadway Will Make it Almost Impassable in Spring and Fall.



An Inexpensive but Serviceable Road in Hastings County. It has been Gravelled and Proper Provision Made for Drainage.

Good roads are essentially a business proposition. They represent an investment which will bring handsome returns by increased property values, and facilities for transacting farm business at a greater profit. When a loan company is asked to advance money on farm property, the class of roads leading to the farm is one of the prominent considerations in appraising its value. A farm with good highways approaching it will sell more readily than will one which has to be reached over neglected and badly constructed roads. Quoting a recent statement by the president of a leading Canadian bank, "Our counties and townships in the older parts of the Province are, as municipalities go, comparatively rich, and there is no obvious excuse for roads which in the spring and autumn, for many weeks together, are of very little use."

Good roads are of vastly more importance to the development of any country than is commonly attributed to them. A vague impression prevails that railways have superseded them, and that so far as industrial, commercial and social progress is concerned, the condition of the common road is of little consequence. A

more indefensible position could not be taken. Railways mean, above all, further development, and that development demands the improvement of country roads as feeders to the railway, and for communication with the adjacent country. Every nation that has achieved supremacy has been a builder of roads. Good roads are not merely an index of, but a means towards national greatness.

In Ontario alone the rural roads are costing more than $2,000,000 for maintenance, but while this is the actual expenditure, there is, in addition, a tremendous toll of time and energy wasted in traveling over bad roads; energy which would be spent profitably were the country's highways in good condition. This and the many other inconveniences of bad roads, handicap farming to an extent, the sum of which is seldom realized.

Conditions Getting Better.

There is, however, an improvement in progress, and during the last few years a great deal has been done. In Ontario many counties have adopted a system of county roads, and this has invariably been followed by the existence of very much better conditions. The Government, in order to encourage this movement, set apart $1,000,000 to be used as grants to counties taking advantage of the provisions of the Act passed. By this Act the Government pays one-third of the cost of improvements effected in counties working on the county system.

In places where the farmers themselves, as the class most directly benefitted, are not sufficiently appreciative of the advantages represented by good roads to interest themselves in an effort to secure them, merchants will be consulting their own interests by heading a movement with this as its object. It may be that public sentiment has already been partially awakened and that the efforts of merchants to crystallize such sentiment into action will meet with a ready response.

It is possible that an association has been formed, but if there is no such organization the retailer should lead in organizing one. His business will be helped through his being identified with the movement, and he will benefit even before his efforts and those of his neighbors have resulted in the improvement of the highways.

It has indeed become generally recognized that this matter of roadmaking can no longer be carried on by means of the antiquated system under which the farmers supplied their labor. It is admitted that the work must be done in a scientific manner and under the direction of both the Provincial and the county authorities.

Here is where the retail merchant comes in. He usually occupies a position of prominence and authority; he has special opportunities for impressing right views upon his community. He could, for instance, utilize his display windows for exhibiting the difference between good roads and bad ones. Photographs of the old-fashioned dirt road and of the modern highway can be obtained at small expense, and if displayed in the window, with appropriate printed matter, will attract wide attention. Nor will they in any way interfere with the display of merchandise. On the contrary, the photographs will attract people to the window, and after the spectators have absorbed the ideas presented in the views they will turn their minds to the merchandise.

One such man can accomplish a great deal if he is energetic and enthusiastic and appreciates the far-reaching effects which will accrue to the business of a town leading to which is a system of good roads, easily traveled in all weather conditions.

A Mud Road, the Counterpart of Which May be Seen in Many Parts of Canada To-day. Can One Imagine Any Pleasure in Riding Over This Road?

WORLDWIDE POWER COMBINE.

A worldwide agreement of all the powder companies in this country and Europe was presented at the federal hearing in Cleveland recently. It provided for a $50,000 fine for any breach of the agreement. This document, after presentation, was identified by President Almon Lent, of the Austin Powder Co., of Cleveland. The agreement was signed 1897, and provided that it should continue in force for ten years and afterward until such time as the companies saw fit to revise it. President Lent says that his company withdrew from the agreement at the expiration of the ten years. The testimony brought out at the hearing related only to the effect the agreement had upon the Austin Powder Company. Its worldwide effect was not touched upon.

LONDON'S PIONEER STORES.

It is not a little remarkable that of the pioneer hardware houses of London —that is, those of the forties and fifties —not a trace remains to-day. The first hardware house here of which there is any record or any one living has recollection of, was conducted by the late Adam Hope, whose business was largely confined to wholesale. While that house was still in existence, the retail firms of Shaw & Vennor (afterwards C. D. Shaw & Co.), Lionel Ridout, Smith, Chapman & Co., Chas. Warren, and, subsequently, T. & J. Thompson (wholesale and retail), came into existence. To-day not even a reminder of any of these business houses remains. In the seventies the firm of Cowan & Wright commenced business, and continued for several years. The late James Cowan (an ex-Mayor), was the practical man, while the late James Wright, who had been a school teacher, looked after the office work. When the partnership was finally dissolved, both members of it continued in business, and to-day James Cowan & Co. (wholesale), the Cowan Hardware Company (retail), and James Wright & Co. (wholesale, heavy hardware, bent goods, etc.), are among the leading, as they are the oldest concerns of the kind in the city. In each case the business is being carried on by the sons of the deceased founders.

WELL-THUMBED EVIDENCE.

A short time ago a well known trade paper received a substantial advertising order from a concern which had formerly used space very sparingly. Later, the sales manager of that concern while conversing in a social way after business hours with the trade paper's advertising representative, explained his reason for the increase of advertising. He said that while making a personal trip over the territory of a sick traveler he entered the private office of a large retail merchant from whom he got only occasional and sparing orders. But, before leaving, he noticed that the most well-thumbed article on that merchant's desk was the current issue of the trade paper in question. That decided him.

Troubles with Heating Apparatus

Some of the Complaints Met With and How to Overcome Them—By C. E. Olda cre.

There is one class of trouble that comes to pretty near everyone engaged in the heating business, and that is complaints from users of apparatus that has been installed during the previous summer and which for one reason or another have not been got down to working conditions. We do not refer to the job that has been skimped or the one that has been put in on a strict price consideration, but the well laid out heating plant, be it warm air, hot water, or steam.

No matter how well a heating plant may have been laid out or how well the work may have been executed there is every likelihood that there will be a complaint of some nature or other from the new user, especially if the user is not entirely familiar with the particular form of heating ot type of apparatus. Everything may be left in the best of order and good and sufficient directions for operation of the heating system may have been posted at a point convenient to the user, but for all that, if the user is not of a mechanical turn of mind some trouble of greater or less magnitude is liable to crop up when least expected.

Be Ready to Answer Questions.

There is no better plan for the heating man, if he wishes to overcome all of the difficulties and have the largest percentage of satisfied customers to ask them to notify him when they are going to start up the apparatus and then for him to be on hand, start the apparatus and give personal instructions as to the operation, and clearly answer any of the thousand and one questions that may occur to the mind of the average user. He at once shows to the user his personal interest in the well working of any apparatus installed by him, which is appreciated by every user, and at the same time he is in a position to satisfy himself from personal observation of the plant in operation that everything is in first class working order. It affords him the opportunity to clear up many points that may not be clear to the user and to set the user to rights where otherwise the management of the apparatus would be entirely wrong.

On every boiler, heater or furnace there are two or more dampers, and no matter how simple their use may be to the heating man, they may be a puzzle to the user, and their action on the furnace may be misunderstood.

It is fair to say that with the average well constructed heating plant that the principal causes of trouble are poor drafts and bad management. In former articles we have dealt with the question of chimneys and drafts and the trouble from this source has been explained at some length, but even where the draft is all that could be reasonably expected yet the heating man is liable to be called on to explain many seeming troubles that cause complaints.

Complaints About Smoke.

One of the first complaints heard early in the season is that a fire can not be started without the furnace, heater or boiler emitting smoke into the cellar. Maybe the damper in the smoke pipe is closed tight, or perhaps there are two dampers in the smoke pipe and the user has taken notice of only one. It is the custom of the manufacturer to provide his heater with a damper in the collar of the smoke outlet and the furnace man or fitter puts another damper—a turn damper—in the smoke pipe at a convenient point say two to four feet from this smoke outlet.

The furnace may have a dust damper between the combustion chamber and the ash pit, and this damper may have been left open. There may be a clean-out at the base of the chimney, and this may have been left off.

Or possibly the user has never had the care of a furnace before and he does not understand the proper way to start a fire. He may go to work and put in plenty of the best kindling and then leave the draft doors at the bottom open entirely too wide, thus causing the furnace to emit volumes of smoke into the basement or cellar. Or he may load the fire-box up with coal long before the kindling has become thoroughly ignited, causing the fire to be smothered and eventually to go out entirely. The furnace or heater may be one of the indirect type and has a direct damper and this direct damper has not been opened. If the heater is of the indirect type there may be one or more clean-out doors which have been carelessly left open.

Sometimes too Much Heat.

Another class of complaint is that of too much heat in the early fall when only a small amount of heat is needed. This complaint is more likely to occur where the heating apparatus is fully equal to the needs at all seasons of the year. That is, it has been put in of full and ample capacity and needs to be held in reasonable check when the weather outside is moderate. This is very likely to occur from shaking the grates too much. It is quite easy to explain that the more the ashes are allowed to accumulate on the top of the grates—not at the bottom—the less is the draft that can pass through the fuel and consequently the less heat that will be had on account of the smaller amount of fuel that will necessarily be consumed.

Keep the fuel up to the bottom of the feed door to get the best and most economical results and shake the grates according to the amount of heat required. The clearer the fire is kept the greater should be the heat received from the heater and the more the ashes are allowed to accumulate in the fire box the less will be the heat.

The frequency with which the grates are shaken or agitated is one of the very best means of controlling the heat and at the same time it regulates the fuel consumption to the weather conditions.

Size of Coal to Use.

The quantity and size of the coal used is the last thing with which to find fault, it is always best to be sure that all other possible causes of trouble have been thoroughly looked into and found to either exist or not exist. Where an apparatus has been built adapted to any given class of fuel it will generall be found that very good average results can be had with the most of the fuel of that class.

After the means of regulation through the amount the grates are shaken comes the question of the setting of the damper in the smoke pipe. The more this damper is turned to the closed position the less will be the volume of gases that can be carried to the chimney and the more it is open the greater is the volume of the gases that will be carried off for any given size of smoke pipe. Just where the damper wants to be set is somewhat of a matter of experience with each individual case, as the velocity or intensity of the draft through every chimney will vary from some other chimney, and it may vary in the same chimney, but it is perfectly safe to turn the damper, after the fire is once well started, to a position half way between full open and completely shut. But the proper point, as has

been stated, is a matter for experience and testing.

Fire Box Full of Clinkers.

Then comes the complaint heard along about the time of the first good cold snap—not enough heat. Very likely you may find the fire in about the same condition that you would expect to see it for the most moderate weather or perhaps even a poorer condition. You open the feeder door, look into the fire box and here apparently is a good deep fire. Then you open the ash pit doors and look underneath the grates and there is not a particle of light from the fire to be seen, or if any, only in spots. You shake the grates so as to get the fire clear on the grates and you find you have not got left hardly enough good live coals to start a fire with. But there is only one thing to do in such a case and that is put on the drafts and get the remaining coal to glowing and then gradually add fresh coal till you bring the fuel up to its proper height—the bottom of the feeder door.

Some time since the writer had occasion to look into a complaint where the user claimed that even in very moderate weather he could not get sufficient heat and investigation showed the condition of the fire was just about what has been described above.

On first examining the furnace, about nine o'clock in the morning, little or no heat was coming from the furnace and the owner said he was sure it was not large enough to do the work; that he had burned lots of coal and was not afraid to burn it if he got the results. He had been operating right along with a shallow fire. The fire he had in the furnace looked allright from the feeder door, but when it was shaken down there was hardly more than enough to start a fire. The fire box was gradually filled and after the fire was going fairly the draft doors were closed and the damper in the smoke pipe was closed pretty near two-thirds. This took about an hour's time. The owner was told to leave it in this condition and another examination would be made about two o'clock in the afternoon. But he said he had no faith in that kind of firing—it would eat up more coal than he cared to buy, and that the fire by that time would be entirely burned out. On the return at two o'clock the fire was in a good condition, had not burned too freely—the entire house was warm all over, from top to bottom, and on asking the owner what he thought of the furnace all he could say was that his only complaint now was that he did not see why he should not have known before how to get the heat from the furnace, and his complaint was against himself for this.

NEW MEASURING RULE.

The Lufkin Rule Company, of Canada, Windsor, are introducing a new idea in measuring tapes. It is an improvement in the markings, and it is such a remarkable improvement that one wonders why it has never been devised before. Although the name does not fully convey its benefits, the new markings have been termed, "Instantaneous Readings," and briefly described, consist of repeating the foot reading at every inch or tenth foot, as the case may be, in figures easily distinguished from the sub-division figures. This brings the total reading instantly before the eye.

The chief difficulty in reading a steel tape arises from the fact that the bright surface of the figures require one to get just the right light to distinguish them. In taking a measurement the total length rarely falls at an even foot, and the reading before the eye is for the sub-division only. It is then necessary to refer back to the foot reading, and in nine cases out of ten the fraction is lost sight of. To avoid error, it is then necessary to take another measurement.

The new method overcomes these difficulties entirely, the whole reading appearing directly and instantly before the eye. Those using a steel tape will readily appreciate the vast saving of time and eliminating of errors these markings will insure.

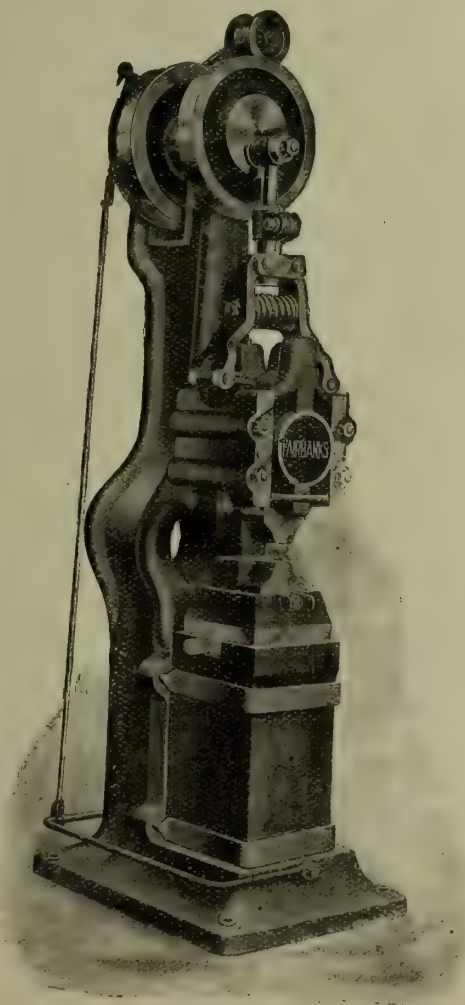
The Lufkin Rule Company of Canada have patents pending on these improvements which will cover all its applications and which will fully protect them in the manufacture and sale of same. An attractive circular will be sent, together with a sample piece of tape on application to their office at Windsor.

Lufkin's New Measuring Rule.

NEW POWER HAMMER.

The Canadian Fairbanks Co. are producing at their new plant at Sherbrooke, Que., the new power hammer shown in the accompanying illustration. For practical construction this hammer, it is said, can not be surpassed, and as a mechanical product it is unique for its simplicity of construction, easy adjustment, economy of space and great range of work.

No hammer made at the present time has less parts than this one. The solid head of frame in which the crank shaft runs precludes all possibility of cap bolts getting loose or shaft getting out of line. The cut shows the spring mechanism which will commend itself to any mechanic as a practicable way of securing the elastic feature of a power hammer. The entire working parts of the hammer are at the top, in full view of the operator, and every part is readily accessible, being easily operated by men of ordinary experience.



A New Power Hammer.

In the construction of this hammer all parts are of such proportion as to insure durability. The material used is the best that can be obtained. The ram or hammer-head, links, sleeve and connection, are of steel castings; the crank, joint pins and side arms of forged steel; the castings for the other parts of a special formula to insure strength and durability, and every piece used is of iron or steel, except the bronze bushing in the crank connection. The Fairbanks hammer has been run for six years on steel work with a total cost of repairs not exceeding $2.

The Fairbanks power hammer can be adapted to a great variety of work by providing special dies. With proper dies large quantities of forgings of uniform size and shape can be turned out, as for instance, carriage work, stone cutters' tools, edge tools, scythes, hatchets, shoe dies, welding gas tubes, etc. The dies always come squarely together in any size or thickness of work, so that parallel sides are insured when wanted.

The Canadian Fairbanks Co. have these hammers on exhibition at their various warehouses at Montreal, St. John, Toronto, Vancouver, Calgary or Winnipeg, where full particulars may be obtained.

THE CLERK WHO SUCCEEDS.

The hardware clerk should study the business he is engaged in just as attentively as he did his duties at school—and probably much more so. He should study the peculiarities and different characteristics of men. He should aim to find out the reason why he can sell one man a certain high-grade stove or range, while, with all his persuasion, he can not induce another to purchase the same article.

He should, above all else, study the merchandise he is selling. Suppose it is stoves and ranges he is pushing. Does he know and can he explain to the customer the proper regulation of the dampers? Does he know all about the good baking powers of the oven? The economy in fuel consumption? Can he tell a good wearing stove from one that will not last, or does he only guess at it? This the hardware clerk selling stoves and ranges should know. If he knows his line it becomes a pleasure to sell stoves and ranges, but if he "guesses" at every thing he is constantly in hot water. The hardware clerk selling stoves and ranges who can meet the customer with superior knowledge has little difficulty in making sales. This knowledge helps him to sell stoves and ranges; it prepares him to talk intelligently, to advance strong, convincing arguments in favor of the line he is selling and by his knowledge of the goods create such a favorable impression that the confidence of the customer naturally follows, and once this is gained the balance is comparatively easy.

The hardware clerk who would succeed in his vocation should know all he can about the goods he is selling, not only to learn if they are good, but why they are good, and how and why one article is better than another similar article. Furthermore, points out the Hardware Review, the clerk who understands his goods and their various uses, is in a position to give his customer needed advice, information that may be appreciated more than appears at the time of making the sale.

PUT YOUR HEART INTO YOUR WORK.

The man who succeeds in any line of endeavor is he who has worked wholeheartedly, whole-souledly, whole-selfedly for success writes Jerome P. Fleishman in Profitable Advertising.

For this thing called success is simply the realization of ideals we have formed, and striven to materialize.

Don't have a "grouch" against the firm that supplies your bread and butter. Better work for ten dollars a week and work than be employed at twenty-five dollars a week and shirk.

Coming down to the store in the morning with a desire to make the day pass as quickly 7as possible, and with as little real work performed as is absolutely necessary, is a dead-sure way to oblivion.

There's no exhilaration that can equal the feeling a man sensates after a particularly hard job has been got out of the way, and got out of the way by being done right.

The difference between enthusiasm and half-heartedness is the difference between a big, fat envelope on pay day and a salary that gets smaller in the eyes of the man who is always looking for, but never working for a raise.

Enthusiasm! That's the thing that builds bridges and tunnels through mountains. One enthusiastic employe in an organization is worth an army of wishers for six o'clock and Saturday afternoon.

And there can be no enthusiasm unless you are heart, head, and hand in league with your work.

The man who views his daily work as part of his daily self is the man who accomplishes things. The man who performs his duties in a spirit of let's-get-rid-of-these-pesky matters is the man you never hear of as making progress.

Put your heart into your work.

MID-HOLIDAY SALES.

With the passing of Christmas comes the annual problem of overcoming the dullness that seems to be a certain sequel to the pre-Christmas rush, writes Clarfield in the Iron Age. Even when concentrated effort is made to overcome this condition there is, of course, a noticeable falling off of trade, but when no effort at all is made to counteract it the duty of going to the store on the days immediately following Christmas becomes almost a punishment.

While the results will probably not be equally gratifying, it is, nevertheless, just as important to plan to build up the sales during such dull seasons as it is to endeavor to surpass the records of naturally busy times. The sales at the end of any given season will look much healthier and more encouraging if the weak points of the previous year have been strengthened by careful planning and well-directed effort.

Frequently it is possible to show greater proportionate gains against a previous light record than against the heavy seasons which in a growing business become more and more difficult to overcome with each succeeding year. Another important consideration is the fact that during some naturally busy season bad weather or other unfavorable conditions may be encountered, and the effort during dull seasons will then help wonderfully to bring the average up.

This work requires thought and effort to bring effective results, and the mere fact that business is naturally more difficult to get during such "dull periods" makes it necessary that such plans should be unique and forceful.

THE OVER-BUYING EVIL.

Almost every man in business has a certain vanity about him which makes him delight in big orders. He listens to the glib talk of the traveling salesman and reflects that he will look far more dignified if he lets his order be booked for 500 dozen than he will if he timidly murmurs, "Ten dozen of that, please." But he doesn't pause long enough to consider how many dozens he can count with assurance on selling.

Probably for every ten cents that is lost from not buying enough, a dollar is lost from overbuying. In order to secure an additional discount, purchases are often made in excess of actual necessities with the hope that an extra profit may be realized from their sale, but this extra profit is quickly wiped out if at the end of the season there are a lot of goods on hand which must be sold at a sacrifice, or carried over to another season.

Many storekeepers fail to realize that when they sell at cost or less, they have

supplied a demand which should have yielded them a profit, besides the loss of interest on the money invested if the goods have been kept in stock for any considerable time, which is usually the reason for the cut.

The foregoing is not an argument for undue conservatism in buying, but advice against loading up beyond legitimate needs in order to get the quantity price.

PROVIDING FOR MORAL REFORM.

It is understood that the Dominion Government has under consideration and will introduce at the next session a bill aimed to prevent the system of payment of secret commissions of all kinds, whether in connection with private or public business. The measure is intended to cover such abuses as have come to light in the administration of the Marine Department in the recent investigation at Quebec.

The new bill, it has been stated, will be modelled along the lines of the British Act for "the Better Protection of Corruption," passed in August, 1906. A summary of this will give some idea of how far reaching the measure is.

The bill provides that if any agent corruptly accepts or obtains, or agrees to accept or attempts to obtain for himself or for any other person any gift or consideration as an inducement or reward for doing or forbearing to do any act in relation to his principal's affairs or business, or for showing or forbearing to show favor or disfavor to any person in relation to his principal's affairs or business, or if any person improperly gives or agrees to give, or offers any gift or consideration to any agent as an inducement or reward for doing or forbearing to do any act in relation to his principal's affairs or business, he shall be liable to imprisonment for a term not exceeding two years or to a fine not exceeding £500, or to both. A similar penalty is provided for the giving or acceptance, with intent to deceive an employer, of any receipt, account, or other document in respect of which he is interested, and which contains any statement which is false or erroneous or defective in any material particulars, and which is knowingly intended to mislead the employer.

The expression "consideration" is provided to include valuable consideration of any kind. An "agent" according to the Act includes any person employed or acting for another. A person serving under the Crown or under any corporation or any municipal council or any board of guardians is an "agent" within the meaning of the Act.

The Act has been found to be working very satisfactorily in Great Britain. While comparatively few prosecutions have been made since its coming into force in January, 1907, it has been found that the fact of its being placed on the statutes has had a salutary effect in prevention of such agreements as it was intended to cover.

An interesting point in connection with the Act is as to whether it can be extended to cover the practice of "tipping," which seems to fall under the same class of agreement.

It is understood that Hon. A. B. Aylesworth, Minister of Justice, is fathering the new bill in the Canadian house. The matter comes up at a very opportune time and should receive the hearty support of both parties. In preparing the bill, however, a great deal of care should be taken. Business conditions in Canada are to some extent different to those in Great Britain, and a measure which is satisfactory there might not be entirely so here. The bill should be submitted to boards of trade, trade associations, and thoroughly practical business men before any definite steps are taken.

A GROWING EVIL.

The transient trader is looming up larger and more numerous than ever in many counties. He plies his calling with diligence and profit. While other merchants rent stores, pay taxes and water rates and hire help, this peripatetic vendor of wares and goods of all kinds goes about in many municipalities unmolested. The tax upon him is usually small and in other cases the authorities appear to be lax about making a levy or putting the machinery of the law in force. The result is that the trader, who is in a community only a few days, escapes taxation entirely, for, when he thinks that the police department is getting active, he moves elsewhere. The average retailer has no objection to the peddler or transient trader, provided he bears his just share of the cost of doing business and pays a fair license fee, but objection arises from the fact that he too frequently steers clear of a license, the amount of which is, generally speaking, much too low. If the average resident would only stop a minute to consider his own best interests he would discover that he can purchase the goods offered by visiting vendors equally as cheap in his own town, obtain better value and have the privilege of exchanging them if they are not exactly as represented, or, if dissatisfied, have his money refunded.

With the traveling representative, who is here to-day and away to-morrow having no personal interest or stake in the locality, his sole object is to sell goods, make as large a profit as possible and then seek pastures new, while buyers have, after his departure, found to their chagrin and sorrow, that the wares have been misrepresented and the prices charged extortionate. The local merchant is not a bird of passage. He contributes a just proportion of the expense of municipal government by paying taxes, local improvement rates, water bills, lighting, heating, etc., besides giving employment to a number of residents. In many instances he has thousands of dollars worth of capital invested; his goods are open for inspection; his prices reasonable, consistent with a moderate profit and the constantly increasing expense of doing business. He is of necessity a friend to the people among whom he resides and to the village or town in which he makes his living. On the ground of public spirit and loyalty to home interests, the consumer is in duty bound to give his support to the local business man in preference to the transient trader or the itinerant peddler.

ADDING NEW EQUIPMENT.

A good many men in business to-day seem to forget that not only interest, but a profit above interest should be made on the investment each year, not only the investment in stock, but also in fixtures and equipment.

Every part of the business equipment deteriorates in value as it grows older, so a certain amount of its value should be cut off from the inventory each year, and this loss should also be considered when the earnings of the equipment are figured.

Many men in business never take the trouble to figure whether they are making or losing money on their equipment. They find they have a little more money at the close of the year than at the beginning, and do not bother to see where it comes from. They do not know whether the addition of a new piece of machinery or other equipment will make or lose them money; if it is a little handier, that is enough.

The right way to figure on the profits on any new equipment contemplated is to make the best possible estimate of its earning capacity, that is, how much it will increase business or cut down expenses, as a labor saving device which will save the hire of help may be a better investment than one which will increase the volume of business. After finding out about how much more it will make for the business, figure up how much it will cost to operate it, then interest on the investment and an allowance for wear and tear, the same as though you borrowed money to buy with, and deduct these figures from the earning capacity, and it is easy to see whether it will pay to add that particular kind of equipment.

Hardware and Metal Markets

(For detailed prices see Current Market Quotations, page 66.)

MARKETS IN BRIEF.

Montreal.

Ammunition—The Dominion Cartridge Company, Montreal, have issued a revised list of their loaded and empty paper shells, which will be found in our current market quotations. The list on metallics remains the same.

MONTREAL HARDWARE MARKETS.

Montreal, Dec. 31.—Taking a review of the markets during the year the most noticeable feature has been the steady way in which prices have held. With but few exceptions manufacturers, despite the sluggishness of trade, made no attempt to force a demand by lowering prices. They recognized that if consumers were not willing to buy, all the price-cutting in the world would not make them. Not only would the attempt end in failure, but the markets by such a course would be rendered unstaple. Prices, therefore, having held firmly, conditions have been good all the way through, and conditions are in fine shape for the future.

Another noticeable feature has been the hand-to-mouth buying which has characterized the demand. There has been extremely little booking ahead and dealers have been content to send in sorting orders of a light character. This holding off has made each of the seasons late, especially with regard to the fall. It has been in many cases imagined, in consequence, that the volume of trade was away below what it really was. Large orders have attention paid them, while the smaller ones are more apt to slip through without notice, the fact being forgotten that small orders, if numerous, amount in the end to just as big a volume as the less frequent large ones. We have no doubt, therefore, that many merchants, when they have completely posted the year's business, will find that it reaches a much higher proportion than they imagine.

The year may not have been a great one, but considering the disadvantages against which it labored at the commencement, it has not been a poor one. And what is better, everything is in good fettle for the new year's trading. Owing to the sorting-up character of the buying, stocks are admittedly on the light side, while the consuming demand, after being on short commons for a year, will be more than normally ravenous. Besides, there will be the extra demand from the development of the country during the year. The harvest has been a record one, bills have been liquidated that pressed hardly upon the farmer, and everything therefore is ready for a bumper year.

BUILDERS' HARDWARE — The falling off in the building in Montreal and district, and especially in the large structures, naturally affected the trade going through. Still the demand from the country kept up fairly well, and the business, generally, taking everything into consideration, was not at all bad. Prices were kept up well, and there was little to disturb the flow of trade. Canadian-made locks, however, were reduced early in the year.

HOUSEHOLD GOODS — There has been a decided falling off in some of these lines but in others a steady trade has been done. Carpet sweepers, washing and wringing machines, food choppers, bread mixers, have had a good sale. Prices have held firmly. Wringers were advanced early in the year. A good demand should certainly arise early in the spring, as this branch of the household is naturally one of the first to feel any economy practised, and goods that had previously been fine sellers showed great falling off. Tinware opened the year badly, but picked up towards the autumn, and finished fairly well.

SPORTING GOODS—Although sporting goods naturally felt the restricted buying, yet perhaps of all lines they felt the slower movement of trade least of all. People are not inclined to deny themselves where sport is concerned, and consequently there has been a good trade all the way through. Summer lines went well, especially fishing tackle, which had a splendid season. One feature of the year's trading was the putting on the market of certain lines of good quality rifles at remarkably cheap prices. A tremendous number of these articles were sold, while in addition the special ammunition needed was so called upon that it became hard to secure. Skates and hockey sticks, although slow at first in moving, owing to the spell of warm weather, proved good sellers up to the end. Jobbers have been in a position to ship promptly, and therefore dealers have not suffered much thro' leaving their orders until the last minute. Prices have changed very little.

STOVES AND RANGES—Prices have kept firm in these lines, and supplies all the way through have been in good shape. The falling off in building naturally affected sales, but taking everything into consideration manufacturers are satisfied with the way things have shaped. It has been noticed that dealers this fall have pushed more thoroughly the sale of stoves and ranges. There has been more display and greater attention paid to the heating department all the way round. This is good policy in the face of the competition that has now to be faced.

NAILS—Nails have been in fair demand. Early in the year there was some severe cutting. Large stocks were on hand, and the demand being dull an attempt was made to stimulate it by cutting. This was perhaps not so effectual as it was hoped to be, and the cut prices was held right through to the end. Bolts and nuts have had a fair season. Supplies have been in good shape with shipments prompt.

RAILROAD SUPPLIES—A considerable amount of construction work going on kept up a steady demand for railroad supplies. Picks, hammers, and blasting powder went out in fair quantities. The local demand fell off in the fall, but outside orders were continued right up to the end of the year. Prices kept firm all through.

ENAMELWARE—Although the season opened quietly, a strong demand set in during the latter end of the year, the Northwest, which had been buying very poorly, sending in much better orders. Stocks are on the light side, and there is every possibility of a strong demand in the spring, especially in a general assorted way. Prices have suffered very little change.

Special seasonable lines have met with a fair demand. Cutlery, silverware and plated ware with other fancy goods, although late in commencing to move, showed good stimulation afterwards. Here again prices held well. Taking everything into consideration the year has not been a dull one by any means.

TORONTO HARDWARE MARKETS.

Toronto, Dec. 31.—Looking back over the year 1908, there are many things the trade can congratulate themselves on. In the first place the great slump in building and manufacturing across the line did not affect Canada to as great an extent as the United States. Hardware manufacturers and jobbers, too, acted wisely in declining to be stampeded and by making no attempt to develop business by lowering prices. The business that was done both by jobbers and retailers was of a profitable nature, and while retailers as a whole made a revolution in their buying methods the larger prices of small sorting orders ran up to nearly as satisfactory a total as the smaller number of orders of larger quantities. In previous years more buying was undoubtedly done, and in Ontario as well as Western Canada the trade will benefit by the more conservative methods adopted in buying. In the past there has been too much of a desire to buy in large quantities in order to gain lower prices. There has also been considerable speculation in some quarters, but the year 1908 has eliminated much of this, and in the future trade should be on a sound basis. All through the year orders for immediate shipment kept the shipping department of the jobbing houses busy, booking ahead was done in a very limited way and many dealers, who had been in the habit of ordering in carload quantities, were content to order for the demand of the immediate requirements. Jobbers and manufacturers accepted this condition willingly, and, in fact, encouraged it in many cases as they realized the desirability to keep the trade on a sound basis and knew that nothing would encourage price-cutting and demoralize trade more than to have dealers overstock and going into bankrutcy. Mail orders were more of a feature in 1908 than in any other previous year.

Builders' hardware, of course, did not sell in the volume of either 1906 or 1907, but as the year went on, building activity increased, particularly in the smaller class of houses. Large works, such as factories and office buildings, were not gone on with in 1908 very extensively, and this hurt the cement trade considerably. Two immense Portland cement mills were established at Belleville and Port Colborne, and their large production and low factory costs forced some of the smaller mills to close down or sell their product at an unremunerative price. The slump in building and larger productive capacity of the cement mills brought about the temporary over-supply, resulting in a desire on the part of manufacturers to sell their product at any price obtainable at the present time. Cement is cheaper than for several years past, the price during the year having been shaded from $2.25 to $1.70 f.o.b. Toronto in carload lots with the usual extra charges of 40c per barrel for bags.

Wire nails, too, were sold cheaper during the year, the price at the beginning of 1908 being $2.55 f.o.b. Toronto, but this being shaded to $2.30, a figure which was held firmly until the present time.

The stove trade throughout the year has not been very satisfactory, but many dealers took advantage of idle time on their hands to tour the farming district and make a canvass for the sale of furnaces. As a result, many dealers were able to show as good a record for 1908 for heating goods as in previous years. What was lost on stoves and ranges being made up in the furnace and tinsmithing department.

MONTREAL METAL MARKETS.

Montreal, Dec. 31.—Although the year's trading in metals has not been noticeable for its large orders, yet a good volume of business has been done, better in fact than many merchants have, with a cursory observation of their orders, imagined to be the case. As in other branches of industry, orders have been of a hand-to-mouth description. Merchants not being confident as to the trend of prices, and as to the continuance of trade, have been reluctant to buy too far ahead. In fact, in many cases they have not bought their metal until the order for the finished goods had been received. Luckily for them, sellers have been in a position to despatch metal promptly, and therefore users with any sudden call for metal have been able to get their supplies without any delay.

As the year went on this hesitancy to cover future requirements gave way and towards the fall it was noticeable that large orders were being placed. In fact, some very good contracts indeed for spring delivery have been booked. It is admitted that the primary markets have been very dull and unstable, and that with one or two exceptions buying has been very poor. At first glance, therefore, it would be thought that local trade had been the same. As a matter of fact, however, trade, despite the paucity of large orders, has been very good in the aggregate, in fact we should say better in proportion than trade in the primary markets themselves. Although the fluctuations in London and New York have dominated prices here in the long run, quotations have kept remarkably steady, being confined to a small radius, not more than two or three cents in the case of the most fluctuating metal, which has been tin. On the whole the tendency has been an advancing one, and certainly the metal situation is much stronger now than it was at the same time last year.

Tin, for instance, opened at 31½c for small jobbing lots, while it closed at 33c; copper opened 14½c and closed at 15½c; spelter opened at 5¼c, closed at 5½c; lead opened at 4¼c, shows the only decline, closing at a fraction under 3⅞c. Imported pig iron has kept remarkably steady, and barring a slight advance in the latter part of the year there was no change except the alteration into store prices. Canadian furnaces, while for a long time cutting prices to suit orders, strengthened when conditions improved in the States and commanded much stronger prices.

All metals received a fair amount of attention, but if anything, tin seems to have been the best seller. The greatest amount of confidence is felt in the prospects for the future. As we have said, some good orders have been placed for spring delivery, and there is this admitted fact that stocks in consumers' hands are light. With the industrial activity that we have every reason to anticipate will set in, a strong consuming demand should make its appearance. Users will, perforce, be compelled to buy more heavily, and the large orders that sellers delight to see will once more make the market brisk.

So far as the primary markets are concerned the year has been remarkable for the way in which prices have held, despite the general poorness of the demand. Especially has this been noticeable in copper. Of course there have been two or three instances of sudden bursts in buying such as the one in the early part of November, while in the case of tin more particularly it will be remembered that in February, March and April the scarcity of spot tin in New York brought out some very speculative movements. All through, however, producers and sellers seem to have had great confidence in the markets, despite prevailing dull conditions, and although the long anticipated consuming revival has not yet made its appearance still this confidence in the end had the effect of keeping the metal markets on a strong basis, and putting them in fair shape for the new year's business.

Tin has shown some remarkable speculative movements, the bulls in London losing no opportunity of advancing the markets. New York figures of course had to follow suit. Despite all manipulation, however, the metal finishes with a strong undertone. Copper has been chiefly noticeable for the determined way in which producers have held off the markets, declining to cut prices to force sales. Undoubtedly the saviour of copper had been the record exportation to Europe. Lead has been disappointing, the £14 mark seemed fatal to this metal, as when it slowly strengthened up to this point it fell away again. Spelter opened and finished the year strongly and seems to be in good condition. Pig iron in the Old Country has been most remarkable for the way it maintained strength, and takes the palm for firmness of figures. The steel markets have been, on the whole, fairly good. Conditions in the States were, for some months, unsatisfactory. Around the presidential election, however, a strong burst of buying occurred, and although exaggerated reports of the orders going through were published, still undoubtedly conditions became vastly improved and prices were advanced. The prices have since held. Altogether the markets are in good shape. What is wanted now is the setting in of the strong consuming demand so long anticipated. We know that it is obliged to come some time, but the longer it delayed the less chance of the markets maintaining the fairly strong position they now hold.

TORONTO METAL MARKET.

Toronto, Dec. 31.—The closing of the year finds that on the whole a fair trade has been done on the metal market so far, at any rate, as local dealers are concerned. One firm stated that the turnover had not been as large as in 1907, as there had not been the same activity in the foundry and factory lines owing to the depression which prevailed during the opening months. In other quarters the turnover in lead, copper, tin, etc., has been reported larger, but the receipts not so great, owing to prices on ingot metals not averaging as high during 1908 as throughout the preceding twelve months. Orders were slower coming in and merchants did not stock up heavily. Of late, there has been a steadier demand and prices have been firm. The feeling regarding the future is much more hopeful than it was at this time in 1907. There are many inquiries for next year, and conditions generally are in a much more satisfactory state than they were. With the renewal of industrial activity a strong consuming demand should continue throughout 1909. Just now matters are quiet as they always are at this festive season, and any business doing is broken in by the holidays. Sales have been for spot business and not for future delivery

The business in all metals locally for 1908 was, on the whole, fair, with, perhaps, tin in the lead. There was considerable speculation in copper during the year, and the situation is well summed up in the following brief review:

"1908, which is now drawing to an end, was one of the most remarkable in the history of the copper trade. The utter destruction of confidence and the accumulation of large supplies of copper in the United States during 1907 made many believe that a rapid recovery from this panicky condition was impossible. The theory was generally expressed that the large shipments of copper to Europe could not continue, and that with an increasing supply on this side the situation would become most precarious around the midsummer of 1908. Neither of these predictions became true, but, to the contrary, we know now that the United States exports for 1908 will be in the neighborhood of 290,000 English tons as against 228,000 tons in 1907 and 248,000 tons in 1904—the previous high-

est record of exports. Naturally, the visible supplies of copper in Europe have increased and are to-day some 35,000 tons larger than they were a year ago.

"It seems reasonable to estimate the 1908 consumption at 400,000,000 pounds which would indicate that the country's copper supply during the current year has been practically absorbed by domestic consumption and exports to Europe.

"A forecast for 1909 is most difficult. Production is certainly running at record figures and it seems reasonable to suppose that the supply of copper for 1909 is not going to be less than 1,250,000,000 pounds. The unknown quantities are—the amount of copper wanted for export and the amount of copper going into consumption."

The copper market locally during the past week has been steady and the price is firm. The selling figure in small jobbing lots is 15½c. In tin the market has been firm for some time, and the latest advices from England indicated that the situation was strong. In small lots the quotation is at the rate of $33 to $33.50 per ton.

PIG IRON—The market has been fair all the year, and, while prices have advanced and receded some at times, the feeling is confident and the present tendency is to advance. The quotations now are: No. 3 Middlesboro, $21; No. 1 Cleveland, $22; Canada Foundry, $18.50.

TIN—It is interesting to compare prices during the past year. In January the figure was $31.50 per ton, in April it had ascended to $35, and in June was back to $31 and $32. In September the figure had gone up to $32 to $34, and now is practically the same, showing that the market is slightly higher than at this time twelve months ago.

COPPER—Locally, the price has not varied a great deal during the year. In January last the figure was 14½c, April 14c, June 13¼c to 13¾c, September 14 to 14¼c, and the present rate is 15½c.

LEAD—At the beginning of 1908 lead sold at $4.25 to $4.50; in April imported pig was going at $4; in June, $3.65; September, $3.75, and to-day the figure is $3.80.

SPELTER—This metal opened at $5 in January, and was quoted at $4.75 and $5 in April; the same figure prevailed in June in September the price was $5.25, while to-day it is $5.50, so that there have not been many radical alterations during 1908.

SHEETS AND PLATES—The business was rather slow for the first few months, but during the last quarter there has been considerable improvement and a good business is being done with the outlook most encouraging and prices firm.

In the foregoing comparisons the quotations for each three months were those in effect at the beginning of each quarter and the prices were for small jobbing lots, not heavy consignments, in which cases the figures would be slightly lower.

OLD MATERIALS—Business in the scrap metal line is decidedly quiet as practically all the foundries and machine shops are stocktaking, and there is little doing. The prices were elevated some few weeks ago, and are slightly higher than those which prevailed a year ago, with a tendency to recede now. Present rates at which dealers are buying are: Light copper, 10¾c to 11c; heavy copper wire, 12c to 12½c; heavy red brass, 10c to 10½c; heavy yellow brass, 8¾c to 9c; light brass, 6½c to 6¾c; heavy lead, 3c; zinc, 3¼c to 3½c; No. 1 wrought iron, $10; stove iron, $12; machinery cast iron, $14; rubbers, 8c to 8½c.

BETTER RETAIL SALESMEN.

It was not many years ago that the salesman was regarded merely as a person in a store ready to sell a customer what he wanted to buy That notion is past. Competition is too pressing and profits too close to permit a merchant to make a living on selling only the things which people come to buy. Profits lie in selling them something they had not thought of buying. It lies in the attractive suggestions clerks can make, and in demonstrating to a customer that money spent for quality is well spent. Salesmanship has therefore developed into an exact science. Many hardware stores furnish all their clerks with text books on salesmanship. Some of the larger stores hire lecturers to address them on the subject. Papers are published in the interest of good salesmanship. The wide-awake salesman not only studies human nature, but cultivates a good address, and overlooks no method of getting results for his employer and for making a friend of his customer. He has made to-morrow's business as important as that of to-day.

INTEREST THE CHILDREN.

Getting the children interested is one of the tricks the modern merchant plays to increase his business. It serves not only as a present business-getter, but some day those children will be grown-up folks with money in their pockets. It will, therefore, pay the aggressive hardware merchant to awaken a lively interest in his store among boys and girls by setting aside a Saturday on which they may visit and inspect his "Special Exhibit for Children," prearranged for the occasion, and consisting of such toys as are usually carried by the up-to-date hardware store, like boys' tool chests and tools, sleds, and coaster wagons, sporting goods, etc. Inexpensive personal invitations should be sent to as many of them as possible in your town and vicinity, at least two weeks before the exhibit, so as to arouse their curiosity. Of course, their mothers must be invited, but, if they cannot come along, the children should come themselves, and they will be shown everything just as if they were grown-ups, without being expected to buy. The children go, and are shown so many new and pretty things that they are converted into real drummers for that store. The merchants who have tried the scheme pronounce it a great success.

HARDWARE TRADE GOSSIP.

Ontario.

Harry Wilford, dealer in stoves, tinware and furnaces, St. Catharines, has assigned.

Several hardware firms presented their married employes with turkeys in honor of the Christmas holidays.

A provincial charter has been granted to the Fleming Grate Bar Co., of Ottawa, to do business in Ontario.

J. L. Richardson, dealer in metals and machinists supplies, is a candidate for Alderman in Ward 5, Toronto.

The hardware store of A. E. Micks, Peterboro, was broken into on Christmas eve, but the burglars did not make a heavy haul.

The capital stock of the Standard Chain Co., of Canada, which is located at Sarnia, has been increased from $50,000 to $100,000.

James Whitten, hardwareman, Bracebridge, was burned out in a recent fire in that town. The loss was $20,000 and insurance $10,000.

The premises and stock of G. R. Simmons, sporting goods dealer, were burned recently in Bracebridge. The loss was $6,000, insurance $2,000.

J. Walton Peart, of the St. Mary's Hardware, Limited, St. Mary's, has been confined to his bed through illness for the past week or so.

R. J. Whyte, manager of the Frost & Wood Implement works, Smith's Falls, has been taken to the Royal Victoria Hospital, Montreal, for special treatment for pleurisy.

In a disastrous fire at Bracebridge on Dec. 27, $20,000 damage was done to James Whitten's hardware store, with $10,000 insurance. G. R. Simmons' sporting goods store was damaged to the extent of $6,000, with $2,000 insurance.

Quebec and Maritime Provinces.

Ed. Clouter, implement dealer. St. Rose, Que., has assigned.

W. L. McGiverin, dealer in builders' supplies, Montreal, has registered.

The Sydney Foundry Co. have installed a new heating system in the Jubilee Methodist church, Sydney, C.B.

Robert Hobson, of Hamilton, president of the Canadian Manufacturers' Association, has been visiting Montreal.

Ed. Turbaine has resigned as salesman for Lewis Bros., Montreal, on the ground north of Toronto, and Arch. McGregor, who has been covering the same ground for Rice, Lewis & Son, Toronto, will take Mr. Turbaine's place after New Year's. Mr. Turbaine's doctor has ordered him to take a couple of months' rest from business activity.

The hardware store of M. I. Garneau, Levis, Que., was completely wrecked as the result of a gas explosion on December 28. It is believed that a lamp was placed on the carbide barrel, which was leaking, thus setting the store alight. The damage is very heavy. People a mile away felt the concussion, and many believing it to be an earthquake, rushed out of their houses. The watchman, J. Maranda, was badly injured.

Fine Christmas Window Displays at St. John—Enterprise Foundry in Operation Again—Nova Scotia Industries Very Active.

HALIFAX.

December 29.—The outlook for the coming year in Nova Scotia is exceedingly bright. At the present time all the large industries are in operation and business conditions generally are in a satisfactory state. Many of the manufacturing firms have large orders booked ahead. The Rhodes-Curry Car Works at Amherst have a year's work on hand and their extensive plant will be operated to its fullest capacity. The Dominion Coal Company intend to increase their output next year, and the Dominion Steel Company have several large orders on hand for rails.

The Nova Scotia Steel & Coal Company have just closed a very successful year's business, and the outlook is promising for the coming year's business. The company is looking forward to considerable expansion of its trade in both steel and coal during 1909. Speaking of the steel end of the company's business, a prominent official of the company said that the conditions just now are much brighter than they were at this time last season. The orders in hand and in sight are greater by many times than were those on hand at this time last year. The facilities for an increased output of coal have been strengthened during the past year and a large expansion in that end of the business is looked for during 1909. Banking operations will start about the middle of January.

The Amherst Foundry Company is working to its fullest capacity and large orders from the upper provinces and the west are being filled as rapidly as possible.

General Manager Birchell, of the Sydney Cement Company, has received a handsome diploma from the officials of the St. John Exhibition for the display of Sydney Rampart cement. The company was also awarded a gold medal, but it has not yet been received.

The Sydney Foundry Company is instaling a modern steam heating system in the Jubilee Methodist church at Sydney.

Halifax leads all Canada per population in the matter of building construction for the year just closing. The total amount spent in building operations was over three-quarters of a million dollars. One hundred and ten private residences were constructed at a cost of $239,850 and for larger contracts, of a more or less public nature the figures were $463,558.

ST. JOHN.

Dec. 30.—Santa Claus in an airship was the attraction offered in one of Emerson & Fisher's big show windows last week. The old saint (life size) was to be seen sitting in an airship with his hand on the steering gear while the mechanism of the machine was placed forward and the after part was piled high with sleds, skates, snowshovels, etc. The design was well executed and drew a lot of attention. The airship occupied about three quarters of the space suspended in mid-air and at one end was a house with a cheery fire burning in an open grate with stockings hanging from the mantel.

W. H. Thorne & Co.'s windows were very attractively trimmed, each one of the six big show windows having a display of some one line of goods that would appeal to Christmas buyers. T. McAvity & Sons and others also had attractive displays.

Two teams of bowling novices from T. McAvity & Sons' employ met in a contest on Black's alleys on Wednesday evening, Dec. 23, when the "Extra Heavies" were defeated by the "Standards" 1,027 to 909. A prize of a fine clock, given by T. McA. Stewart, the foreman, was won by Mr. Duff, who made the best score, while Mr. McShone captured the consolation prize.

The Enterprise Foundry Co., Sackville, after a rapid recovery from the conflagration which swept away all their plant except the power houses, will make their first casting in their new buildings this week. The fire occurred last July and work on the new buildings, of which H. H. Mott was architect, was begun in September. The buildings are now practically completed and nearly all the necessary machinery has been installed.

J. L. McAvity, proprietor of McLean & Holt, manufacturers of castings, stoves, etc., gave his employes each a turkey on Christmas eve.

John E. Wilson, M.P.P., was presented on Christmas eve with a handsome fur-lined coat by his employes in the foundry and sheet metal shops. Mr. Wilson gave each of the men a turkey and a pair of gloves.

Ontario Trade News

Hardwaremen Nominated for Municipal Offices—Sanderson-Harold Co. Likely to Rebuild at Paris—Odd Feature in Window Display at Chatham.

OTTAWA.

December 29.—A new apartment house is to be erected on Lisgar Street between Kent and Lyon Streets.

Ketchum's Patent Hockey Boot is attracting a great deal of favorable attention from devotees of this game. The firm report an immense sale.

Two splendid and comprehensive catalogues of sporting goods have been issued, one by Hurd & McBride, and the other by Ketchum & Co. Both these stores cater to the sporting trade in an adequate manner.

All the hardwaremen shared well in the Christmas trade and it would also seem that the efforts to induce early shopping were comparatively successful.

A new classification governing business within Canada has been issued by the express companies to take effect Jan. 1. The old classification has been in effect since August, 1905. It was the same as used by the express companies in the United States, and contained many items not applicable to the conditions existing in Canada. The new one is a modification of that submitted to the Board of Railway Commissioners in March, 1907, but had not received attention until recently.

HAMILTON.

Dec. 29.—A tendency toward optimism as to the trade development during the next few months, prevails among the manufacturers and jobbers. There is little trade in the retail line at present in keeping with the usual slackness after the Christmas season but the manufacturers, wholesalers and retailers say that everything indicates a slight brushing up in the beginning of the season. Travelers report that money is loosening up in other places better than it appears to be in Hamilton, but little importance can be attached to this as conditions which would affect this section of the country would not be long in affecting Hamilton.

Some of those who were questioned concerning the outlook considered it a little early to speculate, notably S. H. Alexander, of the Wood-Vallance Company. Following the heavy Christmas rush the trade had gone to nothing, he said as practically all of the travelers are in. He expected, however, that business would revive within a short time.

R. H. Merriman, of the B. Greening Wire Company, said that orders were coming in fairly well considering the season of the year, but nevertheless it was remarkable how the different business men seemed to be affected by the prevailing financial conditions. Some saw no reason for complaint and met the demands on them readily while others were just the reverse. The prospects, he thought, were very bright, all things considered. Some dealers were

ordering fairly well and others very well.

Several hardware dealers were asked for opinions but as they are nearly all stock-taking at present they did not feel disposed to say much about the prospects.

The White Sewing Machine Company, of Cleveland, is considering locating its Canadian branch here.

Among the charters announced this week is one to the Canadian Road Machine Company, of this city. The provisional directors are Robert Mancill, Chester Walters and William Bell, all of this city. The share capital of the company is $60,000. The company will manufacture, buy, sell and deal in road machinery.

Ald. Alfred Wright, of Wright Bros., hardware dealers, North James St., is offering himself as an aldermanic candidate again this year as is Ald. Hugh C. S. Sweeney, tinsmith.

C. H. Thompson, traveler, of this city, was married in Port Huron this week. —D. L.

CHATHAM.

December 29.—The Christmas rush in the hardware trade is now over. The 1908 Christmas season, despite pessimistic predictions indulged in a couple of weeks ago, proved very successful. For the month of December this year the business of some hardwaremen will run 20 per cent. ahead of their business for the same month last year, and all-round increases are noted. And this, too, despite the competition in small goods offered by the two new 5-10-15-cent stores, both of which seem to have done pretty well with their Christmas trade. Up till and including the Saturday before Christmas, the business did not give exceptional promise of exceeding that of last year. The four days immediately before Christmas, however, did the trick to a nicety.

At the present moment hardware merchants are engaged in unloading their "left over" Christmas stuff, and report that business is holding up remarkably well, in view of the fact that generally right after Christmas there is a decided slump. Hardwaremen will not have to carry over so much Christmas stock as last year.

Christmas displays were exceptionally good. A feature which attracted quite a bit of notice was a small gas stove, fully equipped, connected and lit, which occupied the centre of J. C. Wanless' cutlery display. The glowing bricks and cheerful fire gave the window quite an added attraction. Oddly enough, this feature of the display was unintentional, the stove being placed there merely to keep the windows clear of frost and steam. It made quite a hit, however.

Plumbing business is holding up well. Several plumbers report having orders enough ahead to keep their men busy pretty nearly full time for the rest of the season.

Ald. W. H. Westman, popularly known as Harry, is the only hardwareman in the local municipal field this year. He is a candidate for the mayoralty and is putting up a brisk and energetic fight.

After fourteen years' service, F. Fox has severed his connection with the M. A. Wigle hardware store at Amherstburg. He is now with the Wanless-Taylor Company, of the same place.

W. E. P.

LONDON.

December 29.—Hardware merchants report the Christmas trade to have been very good, some declaring it to have been better than a year ago. The rush was rather late in coming, but the delay was more than offset by the volume of business done.

Of this year's municipal candidates only three are engaged in the hardware or metal trades. These are Mayor Stevely, whose re-election by acclamation may be regarded as certain; Ald. G. W. Armstrong, and Ald. Parsons. Mr. Armstrong has been a resident of London for 28 years. For 16 or 18 years he was traveler for a Montreal house and in 1895 he organized the London Brass Works, of which he is head. He has served four years in the city council and goes before the electors this year with a children's playground and swimming baths scheme. Ald. Parsons is the well-known East End hardware merchant, and Mayor Stevely has one of the largest stove and tinware concerns in the city.

In industrial lines business is quiet just now, nor is any considerable activity looked for before spring opens. Manufacturers interviewed take a very optimistic view of the situation and predict a distinct revival in the near future.

The Murray Shoe Company is about to erect a new factory on Richmond St. North. It will be three storeys high and 50x300 feet. The new premises will accommodate 150 hands.

The Prairie Provinces

Saskatoon Hardware Firm Dissolves Partnership—Trade Outlook at Prince Albert.

SASKATOON.

December 24.—McGill's hardware store at Warman was destroyed by fire on Sunday.

A new sedimentation basin built under the supervision of Willis Chipman is now in use by the city.

C. Climie has taken a position in the Hopkins' hardware store. He came from Winnipeg and was formerly in the employment of the Marshall-Wells Co., of Duluth.

Clare, Little & Co., commission agents, have moved into their new warehouse adjoining the C.P.R. tracks. They handle farm implements as well as several other lines.

A good holiday trade has been done at the hardware stores. There was a good demand for carvers, cutlery, silverware and similar goods suitable for Xmas presents. Attention has been given to the window displays of these goods. The stores were open late during Christmas week, so as to allow customers to do all their buying in good time.

Oliver & Kempthorne, hardware merchants, of First Avenue, have dissolved partnership. S. T. Kempthorne will carry on the business. Mr. Kempthorne has just returned from a six weeks' trip to the East, during which time the dissolution was mutually agreed to. Mr. Kempthorne has decided to erect a new two-storey store on Second Avenue, on the site occupied by the firm previous to the fire a year and a half ago. The building will be of brick, and will cost $15,000. Operations will begin as soon as weather conditions will allow in the spring, and it is the intention to occupy the new premises during the summer. The present temporary premises occupied by the firm will then be vacated. A new first-class stock of hardware will be placed in the new building. The furniture department will be discontinued and full attention given to hardware lines. Mr. Oliver has become interested in the Perrin Plow & Stove Co., Smith's Falls. This firm has lately made Saskatoon a distributing point for its products in stoves and agricultural implements.—D. G. R.

PRINCE ALBERT.

December 21.—The railway and traffic bridge, around which so much interest has centred during the past two or three years, and which promises so much to this city in the opening up of vast areas of rich fertile land hitherto accessible only by ferry, will undoubtedly be completed by March. The importance of this bridge depends not so much on the fact that it will ensure the C.N.R. running a branch line to Battleford, thus completing a link in the Winnipeg to Edmonton route, which will always be open, as upon the possibilities now opening in the mineral line at Lac la Ronge and elsewhere in this northern bed of wealth, the hundreds of square miles of mixed farming lands which it will make accessible by railway, and the almost unthinkable areas of timber wealth, which, without railway connection, are unapproachable as a business proposition. The bridge also gives promise of the fulfilment of that long cherished dream of Westerners—a shorter route and more direct to Fort Churchill than via "La Pas."

Navigation of the North Saskatchewan which is yearly increasing, already demands recognition. This is given in the swing span composing the middle of the bridge. Three spans on either end and a huge swing covering two spans and controlled by hydraulic power, will measure the bridge's length when complete. Its width will accommodate a single line of rails in the middle with a 12-foot driveway for foot passengers and vehicular traffic on either side.

The work is being done and the material supplied by the Hamilton Bridge Company, who are rushing construction. The three south spans are nearly completed, and piling is driven for the temporary structure in the centre to carry materials and machinery across for building the three north spans. The swing will be the last constructed.

The outlook for building is good. 1909 will see the completion of the $90.000 High School, the foundation of which was built this fall. It is quite within

possibility that a new city hall will be erected or at least started during the year, as the city demands have far outgrown the old one. T. E. Baker is reported to have decided on a large block on Central Avenue, while numerous other business firms propose building.

One most important product of the district has been growing into notice recently through the local cattle shippers to Winnipeg and the Old Country. Some of the best beeves in the large Eastern markets have been produced in the districts adjacent to Prince Albert, and with the increased beef trade has grown its ally, the trade in horses and consequent need of an adequate market. M. R. Cowell, who for three years has conducted a horse exchange is preparing to meet this need by establishing a regular stock market day at his roomy and convenient yards. His opening sale held a few weeks ago occupied three days, and resulted in the sale of nearly $20,000 worth of horses and cattle, largely for cash Every Friday the sales continue and in March there will be another big sale extending over about a week. The sale ring is surrounded by seats, amphitheatre like, and roofed in so that intending buyers may sit in comfort in all weathers. The grounds are fitted up with feed yards and sheds, where horses and cattle are supplied with food and water as required. Before going into the sale ring, each animal is weighed on the grounds and its weight stamped on its body so that buyer and seller alike can estimate its value. All sales are by auction. It is proposed to add to this a produce market in the near future.

The Prince Albert Agricultural Society has just completed its jubilee year with a very satisfactory financial sheet and an official board against whom nothing but commendation was urged. President A. D. Thompson was re-elected for a third term, and Vice-President T. J. Agnew and Secretary W. J. Kernaghan also were re-elected. The value of keeping in touch with other parts of the country was recognized by the appointment of an official reporter.

The balance sheet showed $215.44 cash on hand. and the full limit of paid-up members. The available assets amount to over $17,000.

A recent advertisement of a $40,000 issue of High School bonds resulted in offers of over 107, which was refused by the Council.—B. W. W.

British Columbia

Oil Refinery to be Established at Port Moody—Vancouver's Building Record Shows Million and Half Increase—Electric Smelter at Nelson.

VANCOUVER.

December 26.—At the meeting of the Board of Works on Tuesday evening a letter was received from the Decarie Incinerator Company, offering to put in one of their 40-ton destructors, or to take over the present incinerator and work it on their plan. It is the intention of the city to instal another incinerator, if the by-law passes at the civic elections, and Mr. Decarie is here personally in connection with the matter. There was some discussion over the letter. Ald. McMillan moved that it be filed, as the Decarie incinerator had been a failure in Winnipeg, and there was no use, anyway, in changing the present satisfactory system here for an unsatisfactory one. As the Decarie Company invited inspection of their plant at Spokane, Wash., an amendment was moved that the offer be accepted if the expenses of aldermen and accompanying newspapermen were paid. This motion was defeated by the casting vote of the chairman.

John J. Foote, late sales manager of the McClary Company, London, is the guest of his father-in-law, Lieut.-Col. Markham, of this city. Mr. Foote is visiting all the company's agencies in British Columbia and the Northwest before taking charge of the agency at Winnipeg, where he will reside.

George S. Hanes, formerly city engineer of Windsor, Ont., has been appointed city engineer of North Vancouver. He was the successful one of 120 applicants.

A small fire took place in the basement of the Canadian General Electric Company on Granville Street, last Saturday night, doing $250 damage. The wrappings of a number of electric light coils, which were lying in close proximity to the furnace, caught fire.

The establishment at Port Moody in the near future of an oil refinery will be the beginning of an industry that should assume large proportions here. The local directorate is composed of Col. T. H. Tracy, civil engineer, formerly city engineer of Vancouver ; Robert Kelly, Major J. Duff Stuart, A. M. Tyson, Hugh McLean, all of this city, and Fred L. McLean, president of the Keystone Oil Company, of Seattle. The promotion of the company is being attended to by Leon Melekoy, well known here. The C.P.R. has leased the company the whole of its old terminus holdings at Port Moody on nominal terms. It is proposed to bring the crude oil here in tank boats, delivery not less than eight times a year. The crude product is admitted free, while refined oils pay duties varying from 12½ to 25 per cent. It is stated that this will be a direct parallel to the B. C. Sugar Refinery, except that there will be less opposition. In addition, the company has secured the business of the Keystone Oil Company in this province, which includes 12 contracts for a year's supply of asphalt at $18.50 per ton. The outlook is very encouraging as last year 6,000 tons of asphalt were used in British Columbia, and 60,000 tons were imported in Canada from the United States. There will also be markets in the Orient and the Antipodes.

The plans have been accepted of Warren H. Milner, Seattle, for the large building for the Vancouver Horse Show Association. The estimates call for a construction to cost $30,000, but it is said that the cost will be closer on to $50,000. The building will be erected without delay at the corner of Georgia and Gilford Streets.

The building permits for the past two weeks have reached the value of $96,335 and $29,000, respectively. Already, the record of last year, which was the banner one in building, has been surpassed, with an advance of a million and a half dollars, and the end of the month should make a very large total for the twelve months.

The finest building in Vancouver now occupied is that of the Canadian Bank of Commerce, at the corner of Hastings and Granville Streets, just as one comes up from the C.P.R. depot. It is of granite, three storeys in height, and is very imposing. The structural steel came from Pittsburg, the marble from Italy and France, and the mahogany from the East. It was all fashioned, however, by the local contractors, Kelly Bros., Mitchell, Leek & Co., W. A. Brown, Bishop, Gaskell & Co., Macey, Hinton & Co., and the Otis-Fensom Elevator Co. A feature of the exterior is the handsome bronze doors supplied by the Canadian General Electric Company. The vault is proof against everything. Altogether, the building is as complete and handsome as modern ingenuity and workmanship can make it.

Improvements are also being made to the Bank of Montreal, which will cost $50,000, while the new Federal building is approaching completion. The Winch steel and stone building is also rapidly assuming shape.

R. B. B.

VICTORIA.

Dec. 23.—Xmas trade is now at its height and on all sides the report is very favorable. There are some very pretty window displays of cutlery and "givable" hardware, tools, etc. The hardware men find that wet dripping hats and garments do considerable damage to goods on display stands and counters.

H. C. Martin British Columbia representative of H. S. Howland, Sons & Co., Toronto, visited Victoria this week on his last trip to Victoria in his present capacity. Mr. Martin is going into partnership with Geo. Mather, traveler for Thos. Davidson Co., Montreal, they having bought out the Geo. Hunter Hardware Co., Vancouver, with branch stores at Fairview and Cedar Cove. Mr. Martin has been with Howlands' for the past six years, and his many friends along the road will be pleased at his success as a retailer. Mr. Mather has also been with the Davidson Co. for about six years. Mr. Martin and Mr. Mather have the best wishes of their Victoria friends in their new venture. —W. B. C.

GOOD HOCKEY SEASON.

E. B. Salyerds, of Preston, Ont., the widely known hockey stick manufacturer, was a visitor to Toronto this week. He states that business was quiet the early part of the season, but has picked up remarkably during the last month, as there has not been too much snow and the weather has been favorable for his line.

A movement is on foot for a large addition to the House of Industry, Toronto.

Cost of Heating Residences

Prof. J. D. Hoffman Discusses the Cost of Different Systems in an Address Before the Indiana Engineering Society.

The following discussion relative to the heating of residences by the different methods, and the probable cost involved is from a purely theoretical basis and overlooks several important practical considerations, which, if known, might have a decided effect in changing the result. Some of these points cannot be determined. Much depends, for example, upon the fireman. If he is careless about the time of firing and the amount of coal put in each time, the cost of heating will be greatly increased, at times even doubling the value it should be. From this one point alone it may be seen that the conditions over which the heating engineer has no control may make the system which he has installed an expensive one or the reverse. Other points may be mentioned, each affecting the yearly cost some of which are, character of the winter (cold or mild), efficiency of the furnace, and the quality of the fuel. Any figures, therefore, that may be presented, will assume certain conditions, aod the results will be based wholly upon these assumptions.

The System Discussed.

Three systems of heating will be mentioned: Hot water, steam and furnace. The first and second will be direct radiation—i.e., having the radiator within the room and no outside air connections except through the opening of doors and windows, and the latter will be indirect radiation under three conditions of service: 1, When all the air is recirculated through the furnace and rooms indefinitely; 2, when only enough air is taken from the outside to provide ventilation; and, 3, when all the air is taken from the outside with no air recirculated.

Let the lowest outside temperature which will prevail in the district for any length of time be 0 degree F.; temperature of the rooms, 70 degrees F.; average temperature of the water in the radiators, 170 degrees F.; temperature of the steam in the radiators, 220 degrees F.; temperature of the entering air from the furnace to the rooms, 130 degrees F.; heating value of the coal, 14,000 B.t.u. per pound; efficiency of the furnace grate, 60 per cent.; 5 lb. of coal burned per square foot of grate per hour as an average; cost of coal per ton at the residence, $6.50, and the average outside temperature for the heating year of seven months, 38 degrees F. The last statement is taken from the bulletins of the United States Experiment Station at Lafayette covering the years from 1900 to 1907, as follows: October, 55; November, 41; December, 29; January, 26; February, 22; March, 38, and April, 51 degrees F., respectively.

Heat Loss From the Building.

Calculate the radiated heat loss from the building. Let this be for a 10-room house, 100,000 B.t.u. per hour on a zero day. This heat loss may also be understood to cover such loss of heat as is carried away from the building by the leakage of air through walls and windows. In addition to this heat loss 10 people may be occupying the building, each requiring, say 1,800 cubic feet of air per hour for ventilation. This air will be taken from the outside of the building and when heated for use will replace a corresponding amount of air within, thus causing a heat loss with the outgoing air of, cubic feet of air multiplied by T and divided by 55, equals B.t.u. per hour, as an additional heat loss; where T equals difference of temperature between the room air and that of the outside, and 55 represents the number of cubic feet of air that can be heated 1 degree F. by 1 B.t.u. From this it can be seen that the heat loss through ventilation on a zero day would be about 22,900 B.t.u. per hour, and on an average day of 38 degrees F. it would be slightly greater than 45 per cent. of this amount, or about 10,305 B.t.u. per hour.

Hot Water and Steam.

The expense of installing a hot water system would be greater than that of a steam system, because of the greater amount of heating surface and because of the greater care necessary in its installation. Very little difference, however, can be found between the maintenance costs of the two systems. What difference can be found is probably in favor of the hot water because of the ease with which it lends itself to moderate service in the spring and fall. In the average steam system enough fuel must be employed each time to raise steam before there is a transfer of heat, while in hot water heating a small expenditure of fuel will produce a circulation throughout the entire system. This fact alone would be sufficient proof of increased economy.

Assuming the furnace conditions to be the same in each case, with a heat loss of 100,000 B.t.u. per hour, coal at 14,000 B.t.u. per pound and an efficiency of 60 per cent., it will require 100,000 divided by 8,400, equals 12 lb. of coal per hour in zero weather, or 12 multiplied by .45, equals 5.4 lb. per average hour to heat the building. This means 129.6 lb. per average day of 24 hr., or 27,216 lb. per average year of 210 days. At $6.50 per ton this will be worth $88.40, say $88. The above figures assume that the entire house is kept at 70 degrees F. day and night for the entire season—an extreme condition that would seldom be maintained. It is not uncommon in practice, where the bedrooms are not kept at 70 degrees F., and where the temperature of the entire plant is permitted to drop during the night time, to have a residence the size of this one heated with a cost of only 60 to 75 per cent. of the cost as here estimated.

In hot water or steam heating where the direct indirect or the indirect heating is employed, air is taken in from the outside and passed over the radiator in such quantities as to serve for ventilation purposes. This air is heated as it passes over the radiator and assists in heating the room. All air, however, that enters in this way replaces a corresponding amount of circulating air and incurs a heat loss as given under Furnace Heating.

Furnace Heating.

With all the air returned to the furnace for reheating, except what little escapes through the walls and windows, the heat loss from the building would be the same in this system as given for hot water and steam—i.e., 100,000 B.t.u per hour—and the cost of heating, allowing the furnace to have the same efficiency as a hot water heater or a steam boiler, would be, as before stated, $88.

When there is enough fresh air brought in to give ventilation for, say, 10 people on an average day, we have 18,000 cu ft. of air per hour exhausted from the room at 70 degrees F. and fresh air taken in at 38 degrees F., thus taking away from the building 10,305 B.t.u. per hour, which must be added to the calculated heat loss by formula, making a total loss of 45,000 plus 10,305, equals 55,305 B.t.u. per hour. Under

such conditions the amount of coal required per heating year is 33,183 lb., and at the same rate will cost $107.83, say $108.

When all the air is exhausted at 70 degrees F. to make room for fresh air, the amount circulated per hour—i.e., the amount exhausted per hour—is 45,000 divided by 60, multiplied by 55, equals 41,250 cu. ft. This is far in excess of the ventilation requirement, so would be considered satisfactory from that standpoint. In exhausting this amount of fresh air from the building we lose 41,250 multiplied by 92, divided by 55, equals 69,000 B.t.u. per hour. The amount of coal used per heating year is 24 multiplied by 210 multiplied by 69,000, divided by (.6 multiplied by 14,000) equals 41,400 lb., which at the above rate is worth $134.50, say 135.

Summarizing the values obtained, we have:

1. Water and steam radiation for residence per year $88
2. Furnace.—All the air recirculated 88
3. Furnace.—Air for ventilation, for 10 people 108
4. Furnace.—All the air fresh 135

Condition No. 3 would probably be the best arrangement for handling the furnace.

Grate Surface.

The amount of grate surface in the furnace is one of the important factors in any plant since the furnace is sometimes selected from this value. With a heat loss of 122,900 B.t.u. per hour as given under heat loss from building, and the other conditions as given under assumptions, the grate surface of this plant is 122,900 divided by (.60 multiplied by 14,000 multiplied by 5) equals 2.92 sq. ft., or a grate of 23.2 in. in diameter. The nearest standard size to this is 24 in. diameter, with an area of 3.14 sq. ft.

Cost per square foot of grate surface per year will be:

Cases 1 and 2, 88 divided by 3.14, equals $28.

Case 3, 108 divided by 3.14 equals $35.

Case 4, 135 divided by 3.14 equals $43.

The residence under consideration contains 10 rooms of about 18,000 total cubic feet of room space exclusive of the basement and attic, hence the cost per year per 1,000 cu. ft. of volume is:

Cases 1 and 2 ... $4.90 approximately.
Case 3 ... ... $6.00 "
Case 4 ... ... $7.50 "

Observations From Practice.

There is a great tendency toward having all the heat turned off from certain portions of the house, either through a desire to economize in the fuel bills, or to obtain outside conditions in sleeping rooms. It is a very common practice also to bank the fires for, say, 8 hr. out of the 24, resulting in a decided fall of temperature throughout the house. All these conditions serve to reduce the amount of fuel used. It becomes, therefore, a very difficult matter to make a general statement upon the cost of heating. The following figures taken from observations will give a very fair approximation for the coal used per heating year as per case 2:

a. 1 to 1¼ tons of anthracite coal per room heated.

b. 1¼ to 1½ tons of soft coal per room heated.

C. 4.5 tons of average coal per square foot of grate surface. These values lie between 70 and 80 per cent. of the theoretical values as given under summary of values.

SUCCESSFUL SELLING.

Really successful salesmanship is only possible when the salesman is assisted by persistent publicity. Publicity is the force behind the man which helps in promoting business for the salesman to go out and close. The best kind of publicity for the salesman's purpose is that which is centered exclusively on the salesman's possible customers. For obtaining this kind of publicity there is nothing equal to a trade newspaper which has the whole confidence of thousands of readers. Such a paper is justly regarded by its readers as an authority upon trade matters and is relied upon accordingly. Naturally, advertising appearing in such a paper carries the weight of the paper's reputation with it.

MOVING TOWARD EARLY-CLOSING

The early-closing movement has taken firm hold in Western Ontario, especially in the smaller centres. This has been brought about more by example than by precept. The day of the early-closing by-law, by which a merchant was compelled to close his store, perhaps against his will, appears to have passed by, and the rule to close the store following in the wake of some leader who was not afraid to lose a few dollars by inaugurating the innovation has taken its place. That this rule of example will accomplish more than the law of force is admitted by all. In the first place, a man does not like to be forced, even though it be along the line of his desires but let a man come to him and appeal to his reason and a friend has been gained who will later on be a follower and upholder of any good movement that may be inaugurated.

When the merchants' associations in various centres found that sometimes they were contravening the law by trying to "enforce" early-closing by-laws, and when they went no further than "recommending" that members of the association show a good example by closing early, they made a distinct advance; they made the move popular in the eyes of the general public.

There are advantages to be gained, too, by early-closing, especially in a night. Rather the other way round. store where clerks are employed. The clerks get a needed rest; a little time for recreation. They are thus made better employes—better in health and more loyal. The movement has the sympathy of the public. No doubt at first some little inconveniences are felt, but these are eradicated in a short time, and the buying public will soon accustom itself to the change. The stores need not necessarily be dark at The windows could be lighted, and in this way besides being a public benefactor in the way of brightening up an otherwise dark street, publicity could be had by drawing attention to the window and store display.

The early-closing movement is now working on proper lines. It is a good movement and should be followed up.

TRADE FIRE INSURANCE.

The United States "Paint and Allied Trades Exchange," which was the subject of interest at the conventions held in the U.S. in October, as a result of the reports of the fire insurance committees of the National Paint, Oil and Varnish Association, and the Paint Manufacturers' Association, has been organized. The services of a prominent and very efficient fire protection engineer have been secured as head of the inspection department, and work has now been commenced.

These inspections will be a valuable feature for the reason that they will carry with them a true report as to the exact conditions of each risk, with suggestions, thereby pointing out in what way improvements can be made from the standpoint of fire hazard; this information coming from an expert will inform the owner not only how the dangers of fire can be minimized, but also what can be done to obtain a reduction in his insurance rates. It behooves those who have elected to secure the advantages of membership and share the profits of the organization to keep their plants in order, for one of the essential requirements will be the maintenance of best conditions regarding cleanliness, care and management.

A very large number of the most prominent members of the trade in most of the large cities have joined the organization, although no effort has yet been made to make a thorough canvass. The inspections of their risks and preparation of surveys will take a considerable time, so that we are informed actual underwriting operations, which means the taking of insurance and the issuing of policies, will not commence for three or four months.

USE
Hardware and Metal Want Ads.

There are a hundred little services that a "want ad." in Hardware and Metal can perform for you.

It can get a customer for you for any show cases, counters, or any other fixtures you are anxious to dispose of: it can secure for you a set of tinsmith's tools, a typewriter, a silent salesman or any other article which you are anxious to buy cheaply.

The wider your market the better the bargain you will be able to make.

Our "want ad." page will put you in touch with practically every Hardware Merchant in Canada, and out of our thousands of readers it seems reasonable to suppose that there will be some man who is looking for just such an opportunity as you have to offer.

Rates (payable in advance)

2c. per word for 1st insertion.
1c. per word for subsequent insertion.
5c. additional each insertion when box number is required.

Write or phone our nearest office.

Hardware and Metal

MONTREAL TORONTO WINNIPEG

CONDENSED OR "WANT" ADVERTISEMENTS.

RATES.

Two cents per word first insertion; one cent per word subsequent insertions.

Five cents additional each insertion where box number is desired.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost must accompany all advertisements. In no case can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

RULES FOR COPY.

In addressing replies care of HARDWARE AND METAL don't fail to give box number.

Replies addressed to HARDWARE AND METAL boxes are re-mailed to advertisers every Monday, Wednesday and Friday.

Requests for classification will be followed where they do not conflict with established classified rules.

Orders should always clearly specify the number of times the advertisement is to run.

All "Want" advertisements are payable in advance.

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

AGENT WANTED by cutlery manufacturer in Germany. Goods are already known in Canada, having been sold for 30 years. Sole Canadian agent to be appointed. Good connections necessary. Applications to Box 2915, HARDWARE AND METAL, Montreal. (50f)

CHAINS, ANCHORS, &c.—A Lancashire firm manufacturing chains, anchors, windlasses winches, capstans, steering gears, tanks, iron buoys, pontoons, lighters, dock accessories, &c., desires to communicate with Canadian firms, with a view to opening up business connections. (1538f,45)

WANTED in every town and village, a representative to take charge of the circulation of our various publications:—Hardware and Metal, Canadian Grocer, Financial Post, Plumber and Steamfitter, Dry Goods Review, Printer and Publisher, Bookseller and Stationer, Canadian Machinery, and Busy Man's Magazine. Good financial standing and business connection a strong recommendation. Just the position for a retired business man for his spare time. The MacLean Publishing Company, Limited, Toronto.

AGENCIES WANTED

Manufacturers of hardware lines both at home and abroad watch our paper each week. If you want to secure the exclusive agency for any line for the whole Dominion, for a Province or for your own city or town you will find a Want Ad. will put you in touch with the right firm.

RETAIL HARDWAREMAN, with wide experience, wishes to establish himself as manufacturers' agent in Toronto, and would like to correspond with manufacturers who are interested. Best of references can be given. Address Box 101, HARDWARE AND METAL, Toronto. (tf)

BUSINESSES WANTED.

The business of your next door neighbor may be for sale, and you would not know anything about it. The only way to get replies from the trade everywhere, is to advertise in a paper which reaches the trade everywhere in Canada.

WANTED—To buy, hardware, stove and tin business in good western Ontario town. Stock from four to six thousand. Box 771, HARDWARE AND METAL, Toronto. (53)

TO BUY hardware business, stock $3,000 to $6,000. Give full particulars and terms on which payment may be made. Box 776, HARDWARE AND METAL, Toronto. (3)

BUSINESSES FOR SALE.

Somewhere in Canada is a man who is looking for just such a proposition as you have to offer. Our "For Sale" department brings together buyer and seller, and enables them to do business although they may be thousands of miles apart.

TWO good paying hardware businesses for sale in towns east of Toronto; population about 2,000 and 5,000 respectively. Good reasons for selling. For full information apply Kennedy Hardware Co., Toronto. (52)

HARDWARE and tinsmith business for sale in one of the finest farming sections of western Ontario. The very best of reasons for selling. Address Box 775, HARDWARE AND METAL, Toronto. (3)

MISCELLANEOUS

ADDING TYPEWRITERS write, add or subtract in one operation. Elliott Fisher, Limited, 129 Bay Street, Toronto.

BETTER, CHEAPER, SAFER LIGHTING.—The Pitner System of gasoline lighting is the best system yet produced for lighting a store, hotel or public building. In cities and towns Pitner systems are used because of the superior quality and quantity of light obtained for small cost. They are just as successful in any village or country place. A small outlay secures a complete and independent Pitner lighting plant. Free illustrated booklet and full particulars on request. The Pitner Lighting Co., Limited, Toronto, Canada.

650,000 Not one of the 650,000 retail merchants who have bought a National Cash Register would think of doing business without it. The National Cash Register Co., F. E. Mutton, Canadian Manager, cor. Yonge Street and Wilton Avenue, Toronto.

HIGH CLASS COLOR WORK; Commercial Stationery, Posters. The Hough Lithographing Co. Limited, Office—No. 3 Jarvis St., Toronto, Telephone, Main 1576. Art, Good Workmanship; Business Methods.

IF INTERESTED in a Duplicating Machine for getting out circular letters, reports, price-lists, etc., or for printing various office forms, write for booklet and samples of work. The "POLYGRAPH" is the newest, latest, and best, and sells for a lower price than the others. Is unexcelled by any similar device on the market. F. W. Tenney, Canadian Sales Agent, 123 Bay Street, Room 116 Stair Building, Toronto, Can. (tf)

EVERY HARDWAREMAN should handle the Time Saving Coupler. It is a sure saver of time and temper; it works simply and instantaneously, and its joints are absolutely watertight. The unusual advantages possessed by the Time Saving Coupler will make it popular among your hose using customers. (tf)

A MARKET OF BUYERS, backed up by money to spend, is open to you in the Busy Man's Magazine. Every territory in Canada is represented. If you have something to sell, something you want to buy, a condensed advertisement in the Busy Man's Magazine will put you in touch with the classes you want to reach. Four cents per word will carry your message from Atlantic to Pacific Send copy of your advertisement along with order to cover cost of insertion. Your announcement will appear under a special heading. BUSY MAN'S MAGAZINE, Montreal, Toronto, Winnipeg.

THE RELIABLE LIGHT will light your store 100% better than gas, electricity or acetylene. 600 candle power light costs 1 cent per hour to operate. Thousands in use. A safe, reliable, pure white light of intense brilliancy. Write for booklet M. The Rice, Knight Mfg. Co., Limited, 40 Lombard Street, Toronto.

SITUATIONS WANTED.

Travellers, clerks, or tinsmiths, wishing to secure new positions, can engage the attention of the largest number of employers in their respective lines, by giving full particulars as to qualifications, etc., under "Situations Vacant."

SITUATION WANTED—As manager, assistant or traveler, 38, household accessories, enamelware, tinware, etc.; abstainer, non-smoker, undeniable references, moderate salary. "W," care T. Brabyn, Woodstock, Ont. (1)

SUBSCRIPTION CANVASSER WANTED—To solicit subscriptions for one of our publications. A retired merchant or one who has had experience as a salesman preferred. As high as $1500 a year will be paid to a first-class man. The MacLean Publishing Co., Ltd., 10 Front St. East, Toronto. (51)

WANTED—Position as traveler for wholesale hardware or tin and granitware. 8 years experience Reference. Box 774, HARDWARE AND METAL. (51)

SITUATIONS VACANT.

You can secure a "five-thousand-a-year" manager, or a "five-hundred-a-year" clerk, by stating your wants under "Situations Vacant."

HARDWARE BUYER WANTED. One thoroughly familiar with machinists' tools as well as all lines of hardware. Apply Box 770. HARDWARE AND METAL, giving full particulars of experience, salary, etc. (f)

HARDWARE salesman for Ontario, experienced, all lines. Must have taking manner, be strictly sober and good stock-keeper. Send references. State age, size, wages expected for steady job, when could come. Box 778, HARDWARE AND METAL, Toronto. (2)

TINSMITH and plumber for old Ontario town, steady job. A good, all-round man, able to do good work and willing to do it. Must be sober and reliable. State age, experience, wages and send references first letter to Box 777, HARDWARE AND METAL, Toronto. (2)

ARTICLES FOR SALE.

Don't keep any fixtures or tools around your store for which you have no further use. They are worth more to-day than they will a year hence. Don't keep money tied up which you could use to secure discounts from your wholesaler.

FOR SALE—Safes. Fine new fireproof safe, new burglar-proof safe; latest type; prices right. The Canadian Fairbanks Co., Ltd., 26-28 Front St. West, Toronto. (44f)

FOR SALE—One complete set of tinners' tools. Quick sale. Box 27, Dauphin, Man. (tf)

TECHNICAL BOOKS

HARDWARE WINDOW DRESSING—This book, just off the press, contains 256 pages (8x11 inches) and over 200 illustrations with full working descriptions. Every display is the work of an expert. It illustrates and explains how hardware windows may be dressed to sell goods Price $2.50 post paid., The MacLean Publishing Co., Technical Book Dept. 10 Front St. East, Toronto.

HARDWARE STORE BUSINESS METHODS—Forty subjects of the greatest interest and value to hardware merchants are discussed, including Rules and Regulations for the Store, Good Buying, Stock Taking, Collecting Accounts, Changing a Credit into a Cash Business, Starting in Business, Profit Figuring System. Price $1.00, postpaid. The MacLean Publishing Co., Technical Book Dept., 10 Front St. East, Toronto.

THE ERECTION AND REPAIR OF WIRE FENCING.—Practical treatise relative to Wire, Posts, Pattern of Fence to Build, Laying the Wires, Straining Tools and Repair Work. Price 25 cents. MACLEAN PUBLISHING CO., Technical Book Department, 10 Front St. E., Toronto.

MENSURATION FOR SHEET METAL WORKERS, by Wm. Neubecker.—This new book gives the principles of the art of measure, showing its practical application in solving problems, in finding the areas, dimensions or capacities of the diverse sizes and shapes of sheet metal products. It is of infinite value to all sheet metal workers. 72 subjects and 70 figures. Price 50 cents, postpaid. The MacLean Publishing Co., Technical Book Dept, 10 Front St. East, Toronto.

NEW METAL WORKER PATTERN BOOK, by G. W. Kittredge.—Most elaborate and complete work ever published for sheet metal pattern cutters. Principal contents are Terms and Definitions, Drawing Instruments and Materials, Linear Drawing, Geometrical Problems, Principles of Pattern Cutting. 430 pages (10 x 13 inches), 744 illustrations. Price $5.00, postpaid. MacLean Publishing Co., Technical Book Dept., 10 Front St. East, Toronto.

SALES PLANS—This book is a collection of 333 successful plans that have been used by retail merchants to get more business. These include Special Sales, Getting Holiday Business, Co-operative Advertising, Money-Making Ideas, Contests, etc. Price $2.50, postpaid. MacLean Publishing Co., Technica Book Dept., 10 Front Street E., Toronto.

TINSMITHS' HELPER AND PATTERN BOOK, by H. K. Vosburgh.—A useful handbook for tinners and sheet metal workers. It treats of simpler problems in pattern cutting occurring daily in shops. Contents include Diagrams and Patterns Epitome of Mensuration, Tables, Rules and Recipes Price $1.00, postpaid. MacLean Publishing Co. Technical Book Dept., 10 Front St. East, Toronto.

WELLAND CANAL

Tenders for Supplies for the Year 1909

SEALED TENDERS for Supplies addressed to the Superintending Engineer, Welland Canal, St. Catharines, Ont., will be received until 16 o'clock on Saturday, the 16th of January, 1909, for the supply and delivery of various articles of Timber, Hardware, Castings, Oils etc., for use on the Welland Canal and its branches for the year 1909.

Specifications, forms of tender and other information may be obtained at the Superintending Engineer's Office, St. Catharines, on and after Thursday, the 31st December, 1908.

The lowest or any tender not necessarily accepted.

L. K. JONES, Secretary.

Department of Railways and Canals,
Ottawa, December 22, 1908.

Newspapers inserting this advertisement without authority from the Department, will not be paid for it.

WESTERN CANADA HARDWARE MARKETS

Corrected by telegraph up to 12 noon Friday, Room 511, Union Bank Bldg, Winnipeg.

Winnipeg, Dec. 29.—The Canadian West is taking a breathing spell after the largest, most profitable and satisfactory Christmas trade in its history. It is not that a very high-class trade has been done in some lines, thereby rolling up the actual value in dollars beyond other years, but the trade has been general in every line and the aggregate is very largely made up of what is spoken of in business circles as an "A1" middle-class trade.

For the entire month of December the shops in Winnipeg were crowded in the morning, a sure sign of prosperous times, and commercial travelers returning from late sorting trips, report trade in village, town and country stores good, and farmers buying early and in larger quantities than last year.

Nor is the evidence of prosperity confined to the mere buying of Christmas gifts and Christmas cheer. Payments on loans and mortgages have been met steadily all month, in fact, so much so that some of the mortgage companies almost wish that some of their borrowers were not quite so prompt, as good farm mortgages at the present time look better to them than large sums of money for re-investment. Real estate men report an increasing demand for good inside property in Winnipeg and a steadily growing demand for farm lands, especially improved farms in well settled districts. Another indication of growing activity in real estate is the number of applications for letters patent for companies to handle real estate, more especially suburban sub-divisions. There were no less than three of these new companies gazetted during the past week and all of them with good sized capital. This is no plea for the advantage or desirability of handling real estate by this method but is merely given as an indication of the trend of business at the present time.

The energy with which railway contracts are being pushed and the extensive preparations for next spring are all good and hopeful signs of the times.

In grain circles there is nothing to talk about, the markets are enjoying the usual Christmas lull, at the same time holding very firm, with receipts keeping up well for the time of the year. The superb weather which lasted right up to, and included Christmas Day, which was mild enough for very light spring overcoats, extended the cattle-shipping season and export cattle have been shipped right up to Christmas, which is unusual for the Canadian West.

Hardware Markets.

The turn of the year finds all branches of the hardware trade in the West cheerfully looking forward to a record year's business in 1909. The first six months of the present year were disappointing, the next three showed some improvement and the last three have seen a big impetus in all branches of trade. The big crop and the high price have been the commercial salvation of the West and business is once again assuming normal proportions. Money is circulating freely and the trade are beginning to order much more freely. As indicating the general business condition of the country, the manager of one of the big agricultural implement concerns stated recently that not in the last ten years have his collections throughout the West been so satisfactory as at present.

Price Quotations.

WIRE—Barbed wire, 100 lbs., $3.25; plain twist, $3.40; staples, $3.40 ; annealed wire, $2.90 base; oiled, 10c extra ; bright iron, $3.10 base ; brass spring wire, 32c base : plain galvanized, wire, 6, 7, and 8, $3.50 ; No. 9, $3.10 ; No. 10, $3.60 ; No. 11, $3.70 ; No. 12, $3.30; No. 13, $3.40; No. 14, $4.25 ; No. 15, $4.75 ; No. 16, $5.

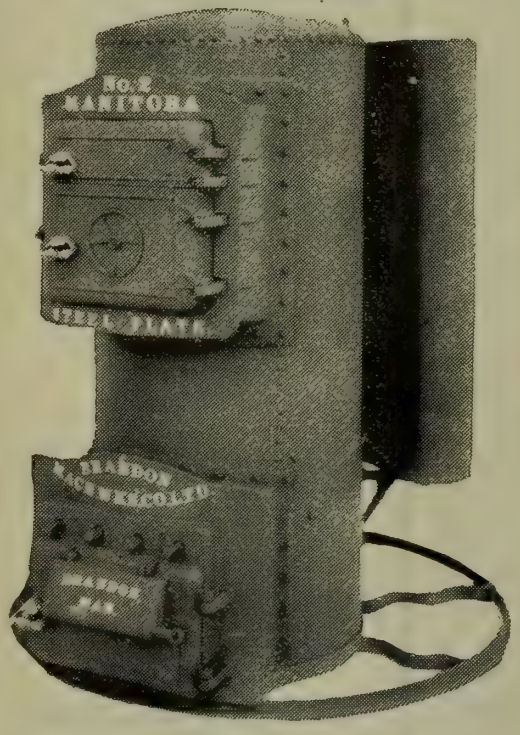
CATALOGUES.

White Frost Refrigerators. — The Metal Stamping Co., Jackson, Mich., have issued a neat vestpocket booklet setting forth the excellencies of the "White Frost" refrigerators. These refrigerators are made entirely of galvanized sheet steel with solid brass trimmings, there being no wood at all entering into their make-up. They are coated with white enamel inside and out and will not shrink, swell, warp or decay. The makers claim for it that it is the one refrigerator strictly sanitary in every respect and also that it is the handiest made.



The Manitoba Steel Plate Furnace

is specially adapted for burning Souris coal and hence is the best furnace for Western Canadians. From 25 to 40 per cent. of the heat energy of bituminous coal is composed of combustible gases which, when not thoroughly consumed, will accumulate in the combustion chamber, often causing explosions. There are no joints in the combustion chamber of the **Manitoba** to open and leak gas, and the special slotted fire-pot will thoroughly consume the gases and smoke.

The consumer saves 25 to 40 per cent. on fuel when he uses the Manitoba.

SELL SCREW PRESS OIL

We have a great deal of interesting information on Sherwin-Williams Screw Press Linseed Oil, which every paint dealer should have. You will be interested in knowing how we are able to make such good oil—how we secure the choicest flaxseed; how we reclean it before crushing; about our screw press process; how we age, filter and test it.

You should have this information because you can use it in talking with your customers. As you, of course, cannot make use of these selling points unless you sell S.W. Screw Press Oil, you should be sure to have a stock of S-W. Oil on hand.

If you will fill out and mail us the coupon we will send you full particulars by return mail.

THE SHERWIN-WILLIAMS CO.
LARGEST PAINT AND VARNISH MAKERS IN THE WORLD
Canadian Headquarters and Plant: 639 Centre St., Montreal, Que.
Warehouses: 86 York St., Toronto, and Winnipeg, Man. 495

Every dealer should carry a stock of S-W. Medicinal Linseed Oil. An especially valuable laxative for horses and stock, also largely used for making Carron Oil for scalds and burns. Is so highly clarified that it is sweet and pleasant to the taste.

Fill out this coupon for prices and full information by return mail.

TRAVELERS' MEETING AT LONDON

Decide to Admit Saleswomen as Me mbers—Travelers' Club Elects Officers.

The annual meeting of the Travelers' Club was held on Saturday night. President Townsend, in opening the meeting, said the year had been one of the most successful in the history of the club. The membership had increased greatly, and was now the largest in the history of the club. Financially, they were in a splendid position, and the profits for the year were the greatest yet. The election of officers was then called for and resulted as follows: Honorary President, Hon. C. S. Hyman; Honorary Vice-presidents, Ald. Donald Ferguson, C. W. McGuire, H. E. Buttrey; President, J. S. Townsend (re-elected). 1st Vice-President, S. Frank Glass (re-elected); 2nd Vice-president, A. H. Brener (re-elected); Secretary, Fred Lind (re-elected). Directors, J. W. Ferguson, B. S. Murray, H. W. Lind, Frank Lawson, Edwin Paul, Benj. Noble, J. T. Green and F. S. Fisher. Auditors, A. H. Moran and J. K. Spry.

Association Meeting.

The annual general meeting of the Western Ontario Commercial Travelers' Association was held on Saturday last. The officers were elected by acclamation at the meeting a couple of weeks ago and there were only a few vacancies on the directorate to fill. To these the following were elected: Directors for London—E. M. Hannah, A. S. Wallace, H. W. Lind, Frank Lawson, W. Smithson, R. H. Turnbull and P. M. Millman. For Galt—C. Turnbull.

The re-adjustment of the mortuary benefit fund was the cause of considerable discussion.

It was impossible to arrive at any conclusion in the meeting and a committee composed of W. R. Grant, William Gray, William Turnbull, J. M. Dillon, W. L. Underwood, P. M. Millman and Col. J. W. Little was appointed to thoroughly consider the whole question and report at the next meeting.

The right of a member to give the power of attorney to another member to vote was abolished at the suggestion of R. E. Davis, and in the future each member must vote himself. It was also decided that the trustee should receive the ballot paper instead of the secretary, as in times past. It was also decided to increase the duties of the treasurer, and he was voted a salary of $200 per annum.

William Gray moved that all the funds of the association should be invested in the name of the president, the trustee and the treasurer. J. M. Dillon seconded the motion, and it was carried.

There was considerable discussion on the motion not to extend the privileges of membership to the ladies, but it was voted down, by a considerable majority.

E. J. Dawson and J. F. Kern were reappointed auditors for the coming year.

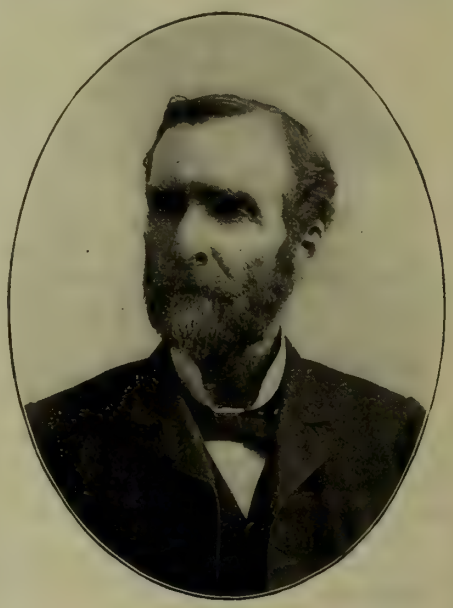
The annual report was received and unanimously adopted. The officers were congratulated on the splendid showing of the year.

The sum of $300 was voted to the charitable fund.

The new board met directly after the general meeting and elected Col. J. W. Little as trustee, and Alf. Robinson as secretary.

DEATH OF CANADIAN TRADE COMMISSIONER.

The news of the death in Shanghai, China, of Alexander Maclean, trade commissioner of the Canadian Government, which came in a cable dated Shanghai, Dec. 22, has been received with a great deal of regret by his many friends in the Dominion. The deceased



THE LATE ALEXANDER MACLEAN,

Canadian Trade Commissioner in Shanghai.

was widely known throughout Canada, even prior to his appointment, Dec. 1st, 1903, as trade agent at Yokahama, when the Government opened its first agency in China. Mr. Maclean was born in Brant County, Ontario, and after teaching a short time in his early manhood, he became a newspaper writer. He established the Mitchell Reformer, published The Cornwall Freeholder from 1865 to 1872, and represented The Globe in the Parliamentary Press Gallery during the stormy period between 1872 and 1874. His next service in newspaper life was as publisher of the Ottawa Times and his final venture in journalism was as managing director of the Montreal Herald.

During the past few months Mr. Maclean had been too ill to attend to his duties in the east, but the department at Ottawa and his many Canadian friends believed he was on the road to recovery. On Oct. 30th, F. C. T. O'Hara, Deputy Minister of Trade and Commerce, received the last letter from him, and in it Mr. Maclean dealt with business matters, giving the impression that he was regaining his health. Last May he was transferred from Yokahama to Shanghai and since that time he had not been in the best of health. He was 74 years of age and was predeceased by his wife. John Maclean, of the Allis-Chalmers-Bullock Company, is a son, and M. Y. Maclean, M.P. for South Huron, a brother.

THE NEWEST SKIN GAME.

"I have always acted on my own judgment after sizing a man up," said a Toronto traveler who has a reputation as a good sport. "For 20 years I have believed that I could tell a rascal or an honest man on sight, but something happened the other day to make me doubt myself. I was loafing around the depot, waiting for my train to go, when a man approached me and started a conversation. We were talking away when a second man came sneaking up and told a hard luck story, and asked to be helped out of a hole. After one look at him I was satisfied that he was a skin, and turned my back on him. Not so with the other man, however. He seemed interested and impressed, and finally gave the fellow a $5 bill to go and get changed, promising him a quarter when he returned.

" 'That's the last of your money,' I said as the hard luck man disappeared.

" 'No; I think he will come back,' was the reply. 'He looked to me like an honest man.'

" 'And to me like a deadbeat. Consider yourself $5 out of pocket.'

" 'I can hardly do that. Something tells me that I am not mistaken in that man."

" 'Perhaps you'd like to bet another five that he will show up again ?'

"To my surprise he said he did, and we found a stakeholder and put up the coin."

"And what happened ?" was asked as the drummer paused.

"Why, the hard luck man came back with the change."

"He did !"

"As straight as a string, and was given the promised quarter ; I lost my five, of course."

"And—and—"

"And a little later on the depot policeman told me that they were pals working together, and that they skinned half a dozen suckers at the game every day in the year."

"But you—you are a drummer."

"Just so ; but it's my business to sell valves and not look for gum games. When you want a soft mark look for a drummer."

The firm of Ingram & Davey, St. Thomas, has been formed into a joint stock company, capital, $100,000, with the following shareholders:—Geo. A. Ingram, Geo. W. Davey, Geo. A. Ferguson, Samuel Ingram, Mrs. Agnes Davey and Mrs. Tessie Ingram.

IVER JOHNSON

SAFETY AUTOMATIC REVOLVER

Near safe is not enough. The only firearm safety worth having is *absolute* safety. The only revolver affording that kind of safety is the Iver Johnson Safety Automatic Revolver.

Millions are in use—yet not a single report of accidental discharge—drop it, kick it, "Hammer the Hammer"—you must pull the trigger to fire it.

Costs no more than near-safeties; but accurate, hard-hitting and positive, with *absolute* safety.

YOUR CUSTOMERS KNOW OF THIS SUPERIORITY.

Our advertising in all the big Magazine and Sportsmen's Periodicals is read in every town in the country. By simply presenting the actual facts our advertising has convinced the public that the Iver Johnson is the safest and best revolver in the world. Our advertising is also arousing the public to the need for a good revolver. So there is a wonderful opportunity for the dealer who sells these goods.

The Iver Johnson goods are never given away as premiums But are sold through legitimate channels. And we never sell by mail where we are represented by a dealer.

Send for Dealer's Catalogue, or order of your Jobber.

Iver Johnson's Arms & Cycle Works, 330 River St., Fitchburg, Mass.

Pacific Coast Branch—Phil. B. Bekeart Co., San Francisco, Cal.

Iver Johnson Single Barrel Shotguns and Truss Bridge Bicycles

Accidental Discharge Impossible.

THE "JAXON" LAMP BRACKET

Patented, July 26, 1898

The only cheap bracket lamp that can easily be hung upon the wall without looking behind the reflecter.

Reflector is movable, permitting light to be thrown in various directions. The safe lamp fount is held secure by the spring of the wire. Finished in bright lustre.

JAXON BRACKETS and bright tin reflectors, without founts, burners or chimneys, 65c, per dozen, retail.

JAXON BRACKETS and reflectors, with founts, $1.20 per dozen.

This lamp takes a "B" burner and chimney.

Founts shipped six dozen in package. No charge for packages.

E. T. WRIGHT & CO. - HAMILTON

When writing to advertisers, kindly mention having seen the advertisement in this paper.

Horse Shoes

The best brand to handle is the one that has the most call.

The majority of horseshoers in Canada specify "M.R.M." when ordering, because of the satisfaction these shoes give when being fitted to the horses' feet.

Material is of the best, and the creasing, punching, and general finish are as near perfect as it is possible to get them.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal waterworks and sewerage systems, railway or mining news, etc.

Municipal Enterprises.

An agitation is on foot to obtain a water supply for Richmond Hill, Ont., from the nearby elevation of the Ridges.

Victoria has increased its water rates all around and now imposes three cents a foot frontage tax for the service pipes.

The Ontario Railway and Municipal Board have approved a by-law to raise $28,000 for sewer construction at Fort Frances.

The International Heating and Lighting Co., Cleveland, have been granted an extension of time in which to commence operations in Edmonton.

At a meeting of the Toronto Board of Health a deputation from St. Thomas was given information regarding a sewer disposal plant which it is proposed to construct.

The Brantford waterworks continue to be successfully operated under municipal ownership commission. The annual report shows this year to be the best in its history. The net earnings are $51,793.68, being $5,600 in excess of last year.

Within a few days the mains of the Seymour Creek water system will be connected with the Vancouver city system and the available water supply of Vancouver will, by that action, be doubled, giving a service in the field capable of meeting the needs of 180,000 people.

City Engineer Edington, of Moncton, N.B., has just presented a complete report of the water and light committee as to the advisability of increasing the city's water supply. The plans submitted would entail an approximate expenditure of $217,000, made up as follows: Embankment, including gate house, wasteway, etc., $87,000; 20-inch leading main, $87,400; cleaning bed of reservoir, $5,500; diversion of Alexander Road, $1,200; land and damages, $5,000; contingencies, $6,000; total, $192,100; pumping station, $25,000, making a grand total of $217,100.

Industrial Activity.

A cement and concrete exhibition is to be held at Toronto, from March 1 to 6.

Dr. D. R. Moore, of Stanley, N.B., has erected a new hardwood mill at that place.

The office staff of the Canadian Iron & Foundry Co., Fort William, have moved into their handsome new offices.

W. W. Butler, of the Dominion Car & Foundry Co., Montreal, says that steel passenger cars will soon come into use in Canada.

Robert Richardi, of Arnprior, is negotiating with Fredericton for the establishment of a clothes-pin factory in that city.

The firm of Foley and Williams, of Chicago, manufacturers of the Goderich Sewing Machine, are soon to open a Canadian branch in Guelph, making that city their headquarters for the Dominion.

Toronto city council has decided to accept the offer of the Otis-Fensom Elevator Company of Hamilton, for the purchase of twenty-two acres in the Ashbridge's Bay area, at $27,500.

Public Buildings.

Dundas is building a new High School.

A new Roman Catholic Church will be erected in Ottawa.

It is stated that a New York syndicate will erect a $200,000 sanatarium at Watrous, Sask.

Tenders will be received up to December 26 for the erection of a Land Titles Building, Saskatoon.

The School of Mining, Kingston, will ask the Provincial Government to erect a building for mining and mineralogy.

The Salvation Army has decided that two new hospitals shall be built in the West, one in Calgary and the other at Edmonton.

The post office building, Kingston, is to be extensively enlarged, at an estimated cost of $30,000.

The B.C. Government will shortly let tenders for the new Central Insane Asylum building at New Westminster.

A by-law to raise $75,000 by debentures for the erection of a garbage destructor will be submitted to the ratepayers of Vancouver on January 14.

A by-law will be submitted to Vancouver ratepayers on January 14 to raise $22,000 for an addition to the jail and for establishing a police patrol signal system.

The by-law providing for the issue of debentures to the extent of $35,000 for a High School and site at Sudbury, has been approved by the Ontario Railway and Municipal Board.

The ratepayers of Vancouver will vote on January 14 on a by-law to raise $187,000 debentures for school purposes, also $26,000 for school board offices, store room and equipment.

Building Notes.

W. & J. Wilson will erect a business block at Victoria, B.C., to cost $25,000.

H. W. Hudson will erect a three-storey business block in Prince Albert, to cost $6,000.

The contract for the erection of the market building at Three Rivers, Que., has been awarded to Mr. Bigras at a cost of about $40,000.

St. Catharines has accepted the gift of R. W. Leonard of $3,500 for a cottage hospital for tuberculosis. The building will cost $10,000.

The ratepayers of Niagara Falls, Ont., will vote January 4 on a by-law to expend $8,300 on improving the city fire halls, and $3,000 on the erection of an armory.

The ratepayers of London will vote on January 4 on a by-law to issue $6,000 4½ per cent. 30-year debentures for the erection and equipment of free swimming baths.

The Y.M.C.A. building at Moose Jaw will probably be completed next year at a cost of about $40,000. To date $14,000 has been expended, $4,000 for the site and $10,000 for the basement.

The Vokes Hardware Company have been granted a permit to erect a five-storey and basement warehouse on Queen Street East. Toronto, at an estimated cost of $35,000.

Recent building permits issued in Toronto include: Franklin & Son, alterations to store, $3,000. Ryrie Bros. and Webster, alterations to stores and dwellings, $10,000; D. Landsberg, pair dwellings, $3,600; A. W. Waters, three dwellings, $5,900; R. W. Harrison, dwelling, $2,600; W. A. Goy, three dwellings, $6,000; Robertson & White, brick dwellings, $6,500; Sim & Smart, dwelling, $5,000; H. E. Bell, three dwellings, $8,500; C. F. Barton, dwelling, $5,000; A. Draper, dwellings, $5,600.

Companies Incorporated.

Rosedale Sawmill Co., Toronto; capital, $40,000. Among the incorporators are T. H. Hancock, F. H. Hurlburt, Mary E. Hurlburt, Marion V. Hancock and E. Gunn, all of Toronto.

H. J. Wood, Limited, Toronto; capital, $60,000; to manufacture wood and metal goods. Among the incorporators are D. J. Procton, C. Nostrant, B. E. Pewtress, E. C. Ironside and H. Riley, all of Toronto.

Modern Agency Supply and Construction Co., Ottawa; capital, $10,000; to conduct general contracting business. Incorporators, F. X. Talbot, R. Belanger, A. Belanger, C. Perron and J. Labelle all of Ottawa.

The National Metal Ware Co., Hamilton; capital, $40,000; to manufacture and deal in wood, paper, iron and metal ware. Among the incorporators are O. D. Peat, H. S. Lees, L. F. Stephens, T. Hobson and J. Hobson, all of Hamilton.

The Provincial Steel Co., Cobourg; capital, $250 000; to manufacture steel and iron articles. Among the incorporators are R. Heath, Diddulph Grange, England; F. W. Coolbaugh, Philadelphia; and Beattie N. MacNachtan and W. L. Allen, all of Cobourg.

Canadian Railway Equipment Co., Toronto; capital, $200,000; to manufacture cars, wheels and trucks. Among the incorporators are A. W. Holmested, F. H. Potts, A. R. Bickerstaff, T. A. Silverthorn and Edith M. Carruthers, all of Toronto.

Forwell Foundry, Limited, Berlin; capital, $50,000; to take over the Forwell Foundry Co., and manufacture machinery and plumbers', gasfitters' and steamfitters' supplies. Among the incorporators are W. Forwell and Ira S. K. Weber, Berlin; and A. W. Groff, H. J Liphardt, and C. Liphardt, all of Waterloo.

News of the Paint Trade

DEALERS SHOULD ORGANIZE.

It is highly important, says an exchange, that paint retailers in small towns, as well as the larger cities, organize for their mutual benefit in the exchange of ideas to maintain more friendly business relations. This is good sound advice and, if followed by the dealers, will result in general good.

There is little merit in some of the policies pursued by paint merchants in many places. The unpardonable feeling of antagonism which seems to have sprung between many of these merchants has forced the weaker dealers to the wall; in other cases cutting prices was the inevitable result. They had hoped to force their competitors out of the paint business by not permitting them to make any profits and were caught at their own game. Friendly co-operation among merchants will alleviate these undesirable conditions and elevate, rather than cause business degeneration.

It is fair to presume that normal profits should be realized from the sale of paint and, as all dealers' interests are mutual in this respect alone, organization, provided the members are sincere in their desire to see these details perfected, can perform the functions. The standard of paint trade will thus be considerably better and will ultimately result in dealer and consumer both deriving their just share of the resulting good.

Besides, the merchants can be generally broadened through social intercourse with each other and can gain ideas which may prove of lasting benefit. The suggestion is made that, besides the discussion of conditions as they exist in the various localities, five questions be taken up for discussion at each meeting, these to be given the speaker several days before in order that he may sufficiently prepare himself. In this manner sufficient thought can be put upon the subject so that an intelligent discussion may be made and the benefits become the greater. Recommendation is made that these topics begin with the most simple and follow each other in their logical order so that proprietors and clerks can gain as much knowledge as possible—and in a systematic manner—from them. The five questions recommended are:

1. What are the objects of house paint?
2. What is mixed or prepared paint?
3. How long has mixed paint been on the market in general use?
4. How is mixed paint made?
5. What are the advantages in mixed paint over lead in oil?
   (a) From the dealer's standpoint?
   (b) From the painter's standpoint?
   (c) From the consumer's standpoint?

PUSHING SPECIALTIES.

Commenting on the sale of paint specialties an exchange says it is not a case of demand with these lines; it is one of making a demand The front window is an agent for causing the demand. The paint window's greatest purpose is to stir the sense of pride in the passerby who is guilty of having something at home in a needy condition which he sees portrayed in the store window in a resurrected resplendent condition. There is good profit in the specialties and the dealer can most certainly create the demand by arousing those in his vicinity to an elevated plane of neatness. If one was walking down the street and saw two wash basins in a window, one in a scratched up, displeasing condition, the other shining like new, we venture to say that, on washing that night in his scratched up basin, he would immediately be reminded of the two basins he had seen. The next day he passes the store again; he sees the two bowls, he thinks, he stops, he buys. Natural, isn't it? The greatest way to call attention to a thing is to show the contrast. Jones and Smith, next door neighbors, hadn't painted their houses for fifteen years. One day Jones got the hunch. Three days after it was finished Smith formed the impression that his own house was disgraceful looking. Not merely needed painting, but was a sight. Another case of contrast effect.

The best way to demonstrate bronze is by treating a chair half way. It must have been bronzed originally; if you haven't one, take any old chair and give it a single coat. After it has dried a few days begin scratching it up. The good looking half should receive two coats.

With all the specialties the best way to push them is by these contrast demonstrations. A chair in the window of a paint shop does not bespeak the place a furniture store. This is quickly offset by a generous sprinkling of the cans about the window. An appropriate show card is always desirable.

All of these propositions are live ones. The best proof that they sell goods is the fact that they have sold for every one who has tried them. Let the paint man establish the precedent that his is the logical place for everything in the decorative line. And the only way he can establish this belief among the people is to show them, not merely by putting them in the window, believing that one-fourth-inch type on a label will be seen by the passerby, but best of all by good-sized striking contrasts backed up with an attractive show card to immediately transmit the idea to those that keep on walking.

H. J. Turner, painter of Leamington, has assigned. A meeting of creditors will be held on Jan. 6.

The plant of Moore, Benjamin & Co., paint manufacturers, West Toronto, was slightly damaged by fire a few days ago.

Paint and Oil Markets

MONTREAL.

December 31.—Although orders have been on the light side throughout the year, dealers keeping their stocks down —this, of course, affecting the jobbers— still a fair volume of trade has been done. There has practically been no great rush, but the demand has been steady, and in this way a larger amount of business has moved through than many have believed to be the case. Although there is really no reason to complain of the year's trading, yet whatever consolation may be desired can be found in the fact that the whole trend of the year's buying favors an exceedingly good year in 1909. Stocks have been so reduced that, presuming there is anything like a good consuming demand, manufacturers and jobbers should experience a heavy call, and an early one, too. There is every indication of building being most active, while farmers with the solid foundation of a record harvest should prove much better buyers. Everything, therefore, looks most promising for the new year.

Considering circumstances, the various markets have kept remarkably steady. Of course, there have been fluctuations, but prices have held fairly well, although the tendency has been to lower the level of quotations.

Turpentine has been very steady all the year through, the range of fluctuations not being wide. Prices have kept on the moderate side, with the result that substitutes have had a very poor sale. Indeed, turpentine closed the year at a remarkable low price of 56c for single barrels, whereas the price at the same period last year was 70c. Turpentine has been free from much of the speculation usually observed in this article. Linseed oil has been subjected to various changes, yet here again, taking everything into consideration, the market has not swung so much as in other years. Linseed oil opened the year at 59c, and closes at 55c, and all the way through the tendency has been on the moderate side. Owing to the oil crushing plants in Montreal, Winnipeg and in Ontario, supplies of good oil have been ample, which accounts for the weakening tendency of the prices. To stop cutting, especially in Toronto, an attempt has been made to bring crushers together, and although nothing definite has yet been settled, yet prospects seem bright for some arrangement.

With regard to ground white lead, a noticeable point during the year has been the falling off in the importations of dry white lead from abroad, owing to the two corroding factories in Canada keeping up a good supply of fine stuff. Here again the tendency has naturally been to find a somewhat lower level, Canadian pure opening at about $6.75, and closing around $5.50 to $6. On the whole a steady volume of trade has been done. Red lead is also lower than the opening price, but seems to be in a fairly firm position at present. The allied white zinc lines have hardly changed at all. The demand all the way through has been quiet, but the tone of the market has kept up well. Putty closes the year a little higher than the commencing figures, quotations being $1.65 compared with $1.60. Trade has been somewhat disappointing at times, but altogether a good volume of business has been done. A noticeable feature has been the scarcity of bladders, this necessitating the greater use of iron drums of 25 lbs. each.

Colors and varnish have had a fair season. Of course, the lessened activity in various industrial concerns affected the sale of varnish. Liquid paints seem to be getting more popular, and it is noticed that hardwaremen are paying much more attention to their paints departments. It is realized that most attractive windows can be made out of the various brands of paint now on the market with the help of the handsome cards that manufacturers now publish, while there is no doubt as to the profit attached to an energetic pushing of the various lines.

TORONTO.

Dec. 31.—December is probably the slowest month in general paint lines in the whole year, and the last week of that month, the week between Christmas and New Year's, is a particularly dull one. The prices remain at the old figures, though rumors of cutting are abroad. This, however, does not bother the jobbers much just now, as the holidays have cut into business and orders are very light.

Stocks throughout the country in both retailers' and jobbers' hands are low and are much lighter than at this time last year. Compared with a year ago, however, the volume of trade is on the upward trend and a far better feeling is evident when the opening year's business is discussed.

There is no denying the fact that 1908 was not a very good year for the showing of profits and many lines were slow sellers when compared with previous years. One exception to this, however, is to be noted; that is, in regard to mixed paints. Whether it was because householders in a spirit of economy did their own painting instead of turning over the work to regular painters, ready mixed lines were good sellers, and with the exception of one month (August) showed even to better advantage than during 1907. That one month was sufficient to bring the year's figures below the total of the previous year.

Perhaps the most-talked-of, if not interesting, situation among paints and oils during the whole year, was the decline in the price of turpentine. Compare to-day's figure, 56c, with the 70c of a year ago to-day, and the situation is placed in a nutshell.

Cutting between independents and the Standard Oil in the south gave jobbers the chance to buy low, and there was a consequent lowering of prices all round.

Linseed oil, too, presented quite an interesting situation and to-day oil can be bought in Toronto five cents cheaper than English oil can be laid down in the city. This low price is due almost

Not a Minute Too Early

to give serious thought to taking up the "ENGLISH" LIQUID PAINT Agency, for next Spring.

The dealer in your town who has a stock of these well-known, well-advertised and well-liked Paints, will get the trade.

Our Advertising Department, our Co-operative Business Methods, our Best Prices and a complete line of

"English" Liquid Paints

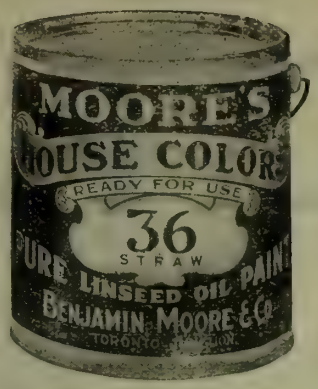
are at your service.

Let us talk business with you.

Address,

BRANDRAM-HENDERSON, LIMITED

Montreal **Halifax**
St. John **Winnipeg**



You do this Take a clean board and paint it with one coat of Moore's Pure Linseed Oil H.C. Paint—any color.

Then take some other clean boards and paint each one with a single coat of any other prepared paints on the market — same color as Moore's.

After that Place all the painted boards upright, side by side, stand off a little and see which board is covered best.

You will see that the board painted with Moore's Paint is away ahead of all the others in hiding power.

The reason is that, instead of spending a whole lot of our money in expensive advertising, we use our money in producing a higher grade Linseed Oil Paint at a lower price. This results in increased sales at excellent profits for you and ourselves.

Now, Send for Our Price List Right Away !

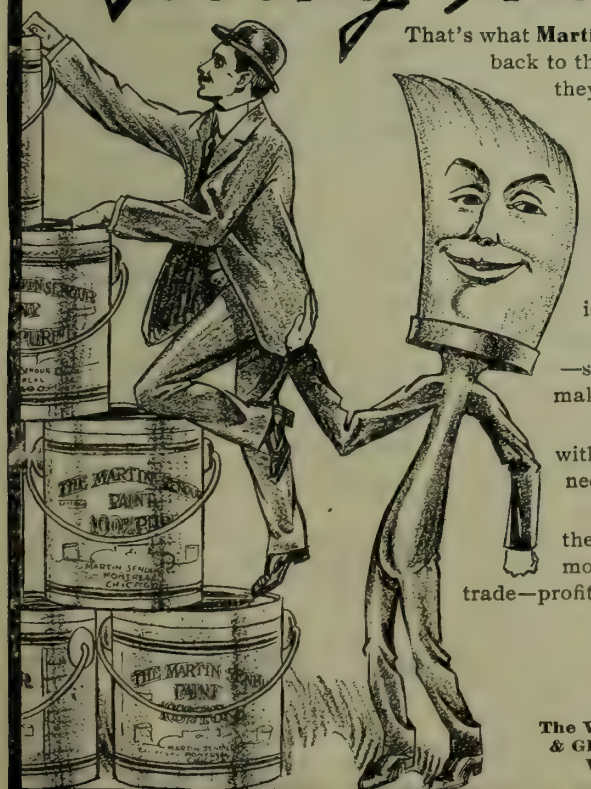
Giving the Dealer a Boost



That's what **Martin-Senour** Paint is doing. People are so **pleased** with it, that they come back to the dealer for **more** and incidentally for **other** goods. And why shouldn't they be pleased with Martin-Senour Paint?

It is the most durable—best looking—and most **economical paint** on the market. Don't you want to sell paint like that? Paint that pleases the buyer and attracts the passers-by? Of course, you do. Well then,

Martin-Senour Paint
100 Percent Pure

is the paint for you to sell.

It's pure—that's why it's the best. Test it any way you like—for purity—spreading qualities—wearing qualities and everything else that goes toward making the best paint.

Martin-Senour Paint satisfies every time. The man who paints his house with Martin-Senour Paint this year will come back for more the next time he needs paint. And every time he gets a chance he'll **boost** Martin-Senour Paint.

Mr. Dealer, are you selling all the paint that you ought to? If you're not, there must be a reason. You're not handling the paint that pleases best and most! Try Martin-Senour Paint and you'll increase your paint trade—regular trade—profits, because it **satisfies.** Write for our "Business Boosting Plan," terms, etc.

The Winnipeg Paint & Glass Co., Ltd., Winnipeg

The Maritime Paint & Varnish Co., Ltd., Halifax, N. S.

wholly to the fact that cutting has been going on, and although there have been several reports that prices would advance quotations remain at the old figures. One thing that should bring about a firming-up in price is the high figure at which flax stands. If the raw material advances there will, no doubt, be a higher price asked for the finished product.

The permits for large buildings which were very prominent in 1907 and were very few during 1908, are likely to come to the front again this year. Indeed, quite a number are already projected in various larger centres. Retrenchment was the watchword last year, and it brought with it low stocks. This will be changed this year, but jobbers should not confuse this with meaning that a boom will be inaugurated, but it does mean that a steady, though slowly improving condition is working its way over the land, and already the beginning has come.

Travelers are yet in for the holidays, though it is likely they will go on their routes early in the new year—and some weeks ahead of last year.

Glass which was moving very slowly during the early months of 1908 has taken a turn for the better. It is natural for it to do so in the fall, but besides this naturalness there's a distinctively better tone in glass and its kindred lines the various grades of putty.

Lead lines during the summer, both before and just after the hot weather, showed activity. Of course, white lead took the lead, but red lead was much in evidence, too.

Colors and varnish had only a fair season, though during the middle of the year there were quite a number of goodly-sized orders going. And now all along the line there is a splendid feeling among jobbers as to the prospects for business during 1909.

USEFUL HINT FOR DEALERS.

Realization of the fact that a thorough knowledge of what a customer needs in the paint line often means that a merchant's trade in this department increases rapidly, as it is natural for the average consumer to buy at the store which seems the best versed. For instance, says the Hardware Trade, it is pertinent for the merchants to be able to tell a prospective patron the approximate amount of paint that will be required to paint his house, barn, or other building and, thereby, a feeling of confidence in the retailer's paint knowledge is generated in the patron's mind. Otherwise, he might form a less likable opinion of the merchant's prowess and delay the purchase, finally giving it to a competitor.

The process by which a merchant may ascertain the amount of paint required to paint a building is easy. Simply add the length in feet of the sides and ends of the building, then multiply by the height, and divide the product by 250. This result will give the required number of gallons of paint for two coats. While the division by 250 may not always give an absolutely accurate amount, due to different mixtures of paints, it is sufficiently close to the exact quantity required so that little paint will be left after the work is done. An example of the foregoing process may give the retailer a better conception of the method. This follows:

	Feet.
Front	40
Rear	40
Side	60
Side	60
Total	200
Multiply height	40
Total	8,000

Divide 250)8000(32 gallons.

A PAINT COMPARISON.

Comparisons are often made between the demand in Britain and the United States respectively as regards the demand for certain specialties in the ready-mixed paint line, such as floor paints, roof paints, car paints, etc., and possibly false deductions are occasionally drawn through lack of appreciation of the totally different conditions that obtain in the two countries. In the first place, says an English exchange, different modes of construction in dwelling-houses, farm buildings, etc., in the two countries account for much.

In America, wood enters into the construction of such buildings to an immensely greater extent than it does in Britain. Wood roofs are pretty much the rule in one country and the exception in the other. Hence a line of roof paints which might sell heavily in the States would be a drug on the market in Britain. Then, again, labor conditions in the painting trade differ considerably in the two countries.

In Britain very little paint (except perhaps in shipbuilding yards and allied concerns) is applied but through the agency of more or less trained painter craftsmen. In America, on the other hand, in businesses or concerns where paint is used in very large quantities, only the foremen, overseers or "bosses" are really painters, the others are more or less partially skilled laborers, who simply follow instructions. This accounts in a large measure for the comparative ease of getting an intrinsically good speciality in the paint line adopted in America. There the owner or employer satisfies himself that the novelty in question is a time-saver or a money-saver, or is better in some particular than what he has hitherto used, and he then insists that it shall be used. In Britain one too often hears the remark from an open-minded master painter: "I think highly of such and such a paint, and should like to adopt it, but my men don't like it!"

THE
C. P.
CO.

THE CANADA PAINT COMPANY'S COLORS and VARNISHES are made absolutely by themselves. This insures uniformity.

THE CANADA PAINT COMPANY'S VARNISHES are made for all who are looking for a good article properly manufactured at a fair price.

THE CANADA PAINT COMPANY'S COLORS and VARNISHES are tested and reported on by their practical staff before shipment.

THE CANADA PAINT COMPANY'S LIQUID COLORS after being well stirred in the can by the purchaser will flow smoothly and evenly.

THE CANADA PAINT COMPANY will cheerfully mail color cards to show the scope and variety of their manufactures.

THE CANADA PAINT COMPANY wishes to state that microbes, germs and dry-rot have "no habitation or abiding-place" where their paints, colors, stains or varnishes are used.

THE CANADA PAINT COMPANY'S COLORS should be applied wisely and well. They will be found to be very economical.

THE CANADA PAINT COMPANY has a good class of customers who are desirous of selling a good class of paint and varnish.

WIRE NAILS, COILED SPRING BARB and PLAIN FENCE WIRE, OILED and ANNEALED, CLOTHES LINE WIRE, STAPLES, etc.

The Western Wire and Nail Co., Limited, - London, Ont.

Tell your customers to

Brighten Up for Christmas

by using a little

LACQUERET

on all the frayed woodwork in the house. It certainly is wonderful the way old, worn woodwork takes on new life and beauty under a coat of Lacqueret. Lacqueret is not a stain or a varnish or a paint, but a translucent lacquer made with soluble, permanent colors, with an elastic hard drying, lustrous liquid. A child can easily apply Lacqueret. We have a special dealer helping plan.

Write Us for Particulars About It

INTERNATIONAL VARNISH CO., Limited

TORONTO, CANADA

Manufacturers of Lacqueret, Elastica, Gutta Percha, and Flattine Floor Finishes, and Flattine Cabinet Finish.

Branch of the Standard Varnish Works,

NEW YORK, CHICAGO, LONDON, ENG., BERLIN, BRUSSELS.

CANADIAN SILVER WHITE ENAMEL

For Interior Decoration

is superior to any other White Enamel made in Canada and no imported Enamel of equal quality can be offered at as low a price.

Your customers, whether **Professional Decorators, Manufacturers or Householders,** will find it just what they want for decorating large surfaces or small articles.

It works freely under the brush, dries with a brilliant gloss and it will **never turn yellow.**

To prepare the surface for the Enamel, use ISLAND CITY White Primer. Ideal for the purpose owing to its exceeding whiteness, its great "body" or covering capacity and its surpassing fineness.

Sticks Everything, But is not Sticky

sounds like a paradox, but it's not, it applies to CAEMENTIUM, the greatest ADHESIVE ever discovered. It is a LIQUID PORCELAIN not a FISH GLUE.

It is unaffected by HEAT, DRYNESS, MOISTURE and ACIDS. Where workers have to affix GLASS, PORCELAIN or METAL this adhesive is unsurpassed.

Electricians will ask for it. Plumbers and Automobile Men will want it. Why not stock this need?

IT MEANS MONEY TO YOU ALSO. WHY NOT BE OUR AGENT?

H&R Guns and Revolvers

H&R ARMS CO.

For over thirty-six years their superior shooting qualities accuracy and dependability have been universally recognized.

Sold the World Over

We want you to have our *new* catalog showing complete line and giving valuable selling points

Here is our three-piece gun, which we call Model 1908. Built on the same lines as our famous Model 1900 in 12, 16, 20 and 28 gauge. This new gun is taken down in the same manner as a double gun—by pulling off the snap fore end and unhooking the barrel from the frame.

Notice the Target Grip

Light, compact, durable. The first combination of a medium priced revolver with *a perfect full grip.* Prevents slipping and twisting—insures a secure hold, because it fits the hand naturally, insuring confidence, which means a steadier aim and greater accuracy in the shooting.

Harrington & Richardson Arms Co.

515 Park Avenue, **Worcester, Mass.**

CURRENT MARKET QUOTATIONS.

January 2, 1909

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Read a Few of the Comments of the Leading London Dailies on the Supremacy of the Ross Rifle at the 1908 Bisley Meet.

"Long range Champion, breaks all records, a rifle of wondrous precision." *London Morning Post, July 16th.*

"Records broken at Bisley. A fine Canadian rifle." *London Daily Express, July 16th.*

"Record scoring with the Ross rifle." *London Daily Telegraph, July 15th.*

"Champion of the year." *New York Herald, July 16th.*

"Performance phenomenal by the Ross rifle." *London Field, July 18th.*

"The new Canadian rifle has made an unexpected and altogether successful appearance." *London Daily Mail, July 15th.*

"Great triumph for the Ross rifle which has beaten all the world's rifles." *London Standard, July 15th.*

"Many experts declare that Ross rifle better than new U.S. Rifle." *Nottingham Guardian, July 17th.*

"An individual triumph, the Lee-Enfield hopelessly beaten." *London Morning Post, July 15th.*

"The Ross rifle achievements were truly remarkable." *London Evening Standard, July 15th.*

"Great victory for the Ross rifle from Canada." *London Daily Express, July 15th.*

"The rifle of the future is the Ross rifle." *London Times, July 16th.*

"A 'plague of possibles' with the Ross rifle." *London Sphere, July 15th.*

BETTER THAN EVER

Our line of lawn mowers for this season's trade is better than ever.

Your leading sellers are:

EMPRESS (ball-bearing), STAR, WOODYATT, DAISY, MAYFLOWER, PHILADELPHIA and ONTARIO (for bowling greens).

Our machines this year have a new style of finish; the bearings are made of a higher grade of carbonized steel; and all wheels and checks are made heavier than formerly.

Write for our Catalogue.

Don't Wait for Something to Turn Up. Try a "WANT AD."

An Attractive Window Display

is one of the best methods to adopt to impress on the men in your district that your store is the Headquarters for any particular line of goods.

Have your window display well in advance of the season and when the demand comes your store will be the first one to be visited.

Lumbering Tools and Supplies

is a seasonable line at the present time. We carry a complete and well selected stock of Chains, Axes, Handles, etc.

You cannot do the maximum amount of business in these lines unless you have a good stock. It is impossible to figure out to the day when the demand will come for these goods. The wise dealer, however, will order well in advance.

Coil Chains

"Proof," "BB," "BBB"

Jones & Lloyd celebrated "BB" "BBB"

Loading and Decking Chain.

Cross Cut Saws

"Shurley & Dietrich" "Atkins" "Disston"

Ice Tools

Saws, Plows, Splitting Forks, etc.

Axes

Single and Double Bit in stock.

Axe Handles

Have you tried a shipment of McCrillis' handles. We can recommend it specially, all grades carried in stock.

Lumbering Tools

Peaveys and Cant Hooks, Whiffletrees, Neck Yokes, Skidding Tongs. Boom Chains, etc.

Rice Lewis & Son, Limited

Toronto, Canada

The White Mop Wringer

Is taking the place of the old way of hand-wringing and scrubbing.

Do **you** have the **"White"** in stock?

Do your **customers know** that you have it?

Keep it well displayed with a **"White" Easel.**

Order direct, or of your jobber

THE WHITE MOP WRINGER CO.

Fultonville, N.Y.

The Bushlin Pattern Knock Down Rakes

are splendid sellers. Money invested in an adequate stock of these goods will bring you in a sure and quick profit. They are made of high-grade material, strong yet light, with wood or wire bow, and are shipped to you in very convenient bundles. The demand for wood rakes is sure to come. Order your supply now so that you will have the goods in time to get the cream of the trade.

Write for complete catalogue and price list.

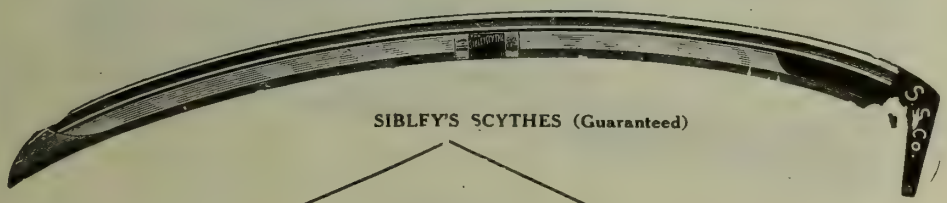
Harvest Tools

Watch this page for a few pointers in buying

Bedford Harvest Tools

shipped by this Company, have the best handles of any goods manufactured in Canada. This is a strong statement, but we can prove it, and if we do not do so to your satisfaction we will permit you to return anything we ship you in this line at our expense. We guarantee that this stock is all fitted with **Second Growth Ash Handles** or no **sale.** If you have not bought your full supplies, let us have a sample order. We will charge you the same price as you will pay for the poorest goods that are shipped to you.

Sibley Scythes



SIBLEY'S SCYTHES (Guaranteed)

SIBLEY SCYTHES

have the **LARGEST SALE** of any individual make that is sold in the Dominion. We do not need to make this statement in many places as it is generally known to the trade.

We have the exclusive sale of this particular make.

If you have any on hand that have not given the best of satisfaction through cause of manufacture we will replace them free of charge.

No. 461 Gillette Set

Nearly 3,000,000

Gillette Safety Razors are now used daily by the same number of satisfied men. Gillette Safety Razors are the best selling hardware specialty that has ever appeared. These razors have become as staple an article as hammers or two-foot rules in many hardware stores. The "New Process" blades made of improved steel and with improved temper and finish, require no honing and no stropping. 17,000,000 of these blades were sold during the first month they were on the market.

Are you handling Gillette Safety Razors?

Are you pushing their sale?

If not you should, for you are missing an opportunity to make money. They are easy to sell and liberal supplies of advertising matter are given away to promote sales.

SOMETHING NEW

THE

Soss Invisible Hinge

When a door is shut you cannot see any part of a Soss Invisible Hinge. The Soss Hinge is built on an entirely different plan to the ordinary butt hinge, being superior to it for all purposes. On very fine work like book cases, ladies' desks, wardrobes, pianos, china cabinets, etc., the large manufacturers are using the Soss Invisible Hinge almost exclusively. Just as easy to apply as the ordinary butt hinge, too.

Write for Illustrated Booklet.

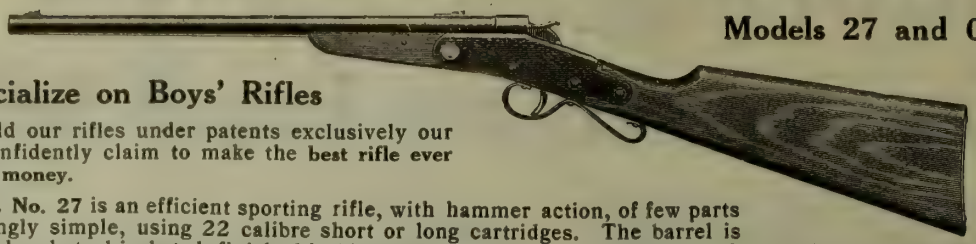
HAMILTON (22 Calibre) RIFLES

Money Makers



Models 27 and 027

Prices $2.00 and $2.25

We Specialize on Boys' Rifles

We build our rifles under patents exclusively our own and confidently claim to make the **best rifle ever built for the money.**

MODEL No. 27 is an efficient sporting rifle, with hammer action, of few parts and exceedingly simple, using 22 calibre short or long cartridges. The barrel is bronze, rifled and steel jacketed, finished in blue black gun finish. Breaks down for loading and ejecting shells. Flat stock and forearm of gun of gum wood. A beautiful model, symmetrical and well balanced. Barrel is 16 inches long, length of rifle over all, 30 inches. **Price $2.00.**

MODEL No. 027 is exactly like No. 27, except the stock and forearm, which are of genuine walnut, turned and beautifully finished. **Price $2.25.**

Other models are Nos. 15 at $2.00, 19 at $2.50 and 23 at $3.50, each a winner in its class.

Our continuous advertising in the boys' papers will bring the business to you, as every boy will want one and you should have a stock on hand. **Write for catalogue and net trade prices.**

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from Wholesalers, Manufacturers and Retail Dealers, who usually intimate they have ooked through Hardware and Metal, but cannot find any firm advertising the line in question. In the majority of cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay them to advertise in larger space.

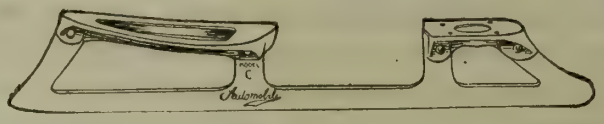
THE NEW SKATE

Ounces lighter than any other—and stronger



IT'S just possible you have noticed that the skate you were selling largely last season was a very antiquated proposition; that it might be made lighter and just as strong.

The "Automobile" Skate fulfils this idea. It's as far ahead of the present day skate as an automobile is ahead of the old-time buggy.

Lighter by many ounces than any other made and stronger.

It has an aluminum alloy top the metals just mixed to a point where they combine to make a material as strong as steel and five times as light. The "Automobile" Skate has also a thin blade of nickel steel—the toughest, strongest tempered metal on the market.

The Argument

FIGURE it out this way: Every slide of a skate takes you forward something over four feet while the other skate is lifted and held above the ice. Suppose a person goes ten miles around a rink—which distance is easily covered by most anyone skating to music—he has covered 52,800 feet and lifted either one skate or the other 13,200 times. We say that the "Automobile" Skate is, at the lowest figure, six ounces lighter than any other made. Figuring that out, we find that he has actually lifted 4,888 pounds less than he would were he using any other skates.

LOOK OUT!

¶ Live business men should always be on the look-out for new lines which are going to take on, because by not carrying them they lose trade and reputation.

¶ We recommend them, therefore, to be quickly on the trail of our new No. 23 Handsaw, which has already met with great favour, partly because men wanted a straight back to compare in quality with our 87 and 87A, and partly because we have hit on a mighty good thing in our new alloy saw steel.

¶ There's "just a little something" in it which makes the difference your customers will notice.

SPEAR & JACKSON, LTD., SHEFFIELD.

Up, Be Doing!

Some people say
January is a stand-pat month.
It is not so.
There's business every month,
For the business man
Master of conditions in his town.
Who cares not for conditions that exist elsewhere.

Same dealer gets the orders
Every day because he "gets in" right.
—No, not lucky!
Just a wee bit "foxy"
At knowing where to deal
And knowing how to take advantage
Of the sales help offered free
By some big people.

You see, there is a difference
In people, goods and service
When it comes right down to a good-sized test.
Big people with ideas
Experience and interest in you—
They're rare, but still shrewd sense and judgment
That is sound can find them.

Search for the big smoke stack,
Skilled artisans,
Exclusive plans in
Stoves, Furnaces and Enamelled Ware,
And You get off at London,
Made "Famous" by McClary's
—You know that name.

We are ready always
To transact business in the trio of lines named above.
We have the plant,
We have the men,
And others say our goods are known
From coast to coast for excellence.
It is meet that we know you
That you may know our virtues.
Start 1909 right.
Your order may only take
A box quite small
Or perhaps call for a car.
It matters not
We'll fix you up,
On the good old plan.
The point is **Order Now.**

Crown Perfection Range

"Smart's Crown"

A new addition to our line which we guarantee to be the equal of any Range (and superior to many) in construction and baking qualities.

The Crown Range

is a sure seller, just the kind of Range for which there is a good demand and just the one you want to handle. A Range that sells at a Reasonable Price and which can be heartily recommended.

The JAMES SMART MFG. CO., Limited

Winnipeg, Manitoba **Brockville, Ontario**

Low Built—No Joist Cutting

One of the many strong selling points of the

Lackawanna Furnace

is the ease with which it can be set up in a low cellar. The horse-shoe shaped Lackawanna flue passes right around an inside air space which surrounds the dome over the fire pot. Thus in the Lackawanna there is an unusually large radiating area, and an unusual amount of surface exposed to the products of combustion. The Lackawanna is made in five sizes for hard and soft coal or wood and with any of these fuels will give highly satisfactory results at the minimum of expense.

Thursday, Feb. 11—

9.00 a.m. Visit Canadian Shovel, Canada Steel Goods and Canadian Drawn Steel factories.

1.30 p.m. Convention (open to travelers, etc.) Question box discussion.

8.00 p.m. Complimentary theatre party.

Friday, Feb. 12—

Hamilton manufacturers invite visiting retailers to visit the blast furnace and other hardware and kindred industries.

PREPARING FOR CONVENTION.

The executive committee of the Ontario Retail Hardware and Stove Dealers' Association met at Hamilton on Dec. 31 to make final arrangements for the big convention to be held at Hamilton on Tuesday, Wednesday and Thursday, Feb. 9, 10 and 11, next.

D. Cinnamon, Lindsay, was chairman in the absence of President Hambly. A. Ballantyne, Brantford; J. R. McMillan, Guelph; John Caslor and Weston Wrigley, Toronto, were present, letters and telegrams being received from the others who were unable to attend.

Arrangements for Convention.

It was decided that sessions of the convention be held at 2.30 and 8.00 p.m. Tuesday, and 1.30 on Wednesday and Thursday afternoons, the Tuesday evening and Thursday afternoon sessions being given over to addresses on trade subjects and question box discussions, travelers and others in the trade being invited to attend the Thursday session.

R. R. Williams, hardware editor of The Iron Age, New York, who expects to attend the convention, will be invited to address the members on the danger to the trade resulting from parcels post legislation as well as to lead the question box discussion. It has been suggested that the association send a deputation to Ottawa to interview Premier Laurier and his Cabinet, placing before him the desires of the retail hardware men on this question.

A prominent paint manufacturer will be asked to address the convention on the reasons why hardware merchants should sell mixed paint in preference to lead and oil.

A representative of a roofing manufacturer will also be asked to give a short talk on how roofing should be put on.

The representative of an oil tank firm has offered to give a short address on oil storage and lower insurance rates. His offer has been accepted.

An advertising writer's offer to outline a few suggestions regarding retail hardware advertising was also accepted.

"How to increase profits in the tinshop" may also be discussed by a man who knows the subject.

All of these addresses will be general talks of an educational nature and the men who speak will avoid pushing any special lines they may be connected with. Suggestions regarding additions to this list will be welcomed by the executive.

The question box discussion, as in previous years, will be one of the most interesting features of the convention. Two boxes will be provided, one for questions to be discussed at the meetings attended by members only and the other for questions to be taken up on Thursday afternoon when representatives of the wholesale and manufacturing houses will be present. Any merchant or traveler having a question worthy of discussion is urged to send it in to the secretary before the convention if possible.

Amongst the questions to be discussed the following have been suggested:

"How the merchants in a town can form a mutual plate glass insurance company," discussion to be led by W. G. Scott, Mt. Forest.

"What is the cost of doing business?" to be introduced by D. Cinnamon, Lindsay.

"Is it possible to do a cash business?" discussion to be introduced by A. Ballantyne, Brantford, and followed up by J. R. Hambly, Barrie; D. Brocklebank, Arthur; F. W. Jefferys, Midland, and others who have introduced the system or made a study of this problem.

"How Guelph merchants collect their accounts," led by J. R. McMillan, Guelph.

"The advantages of forming a limited stock company to conduct a hardware business," led by Frank Taylor, Carleton Place.

Entertainment Features.

On Wednesday night Wood Vallance & Co. will tender the members and guests of the association a complimentary dinner, and on Thursday night a theatre party will also be given.

The hardware manufacturers of Hamilton, who are associated with Wood Vallance & Co. in entertaining the visiting retailers, will have street cars on hand on Wednesday and Thursday mornings to convey the delegates to the plants to be officially visited. These are the B. Greening and Canada Screw Works on Wednesday, and the Canadian Shovel, Canada Steel Goods and Canadian Drawn Steel Works on Thursday morning. On Friday the members will visit such other plants as they may desire, there being about two dozen hardware and stove factories in Hamilton, at all of which visitors will be welcomed.

Amongst the souvenirs to be distributed will be a book of views of Hamilton, presented by the civic authorities.

Another interesting souvenir will be the official badge, made in the form of a metal lock, by the leading manufacturer of these goods in America. Every badge will bear the name of the person who wears it.

Exhibits Arranged For.

The Taylor Forbes Co., Guelph, will make a large display of their goods; the Lufkin Rule Company of Canada, Windsor; Carborundum Co., Niagara Falls, N.Y.; Simonds Canada Saw Co., Montreal; Hemming Mfg. Co. (Auto Strop Razors), Montreal; Canada Paint Co., Montreal; Standard Paint Company of Canada (Ruberoid Roofing), Montreal; S. F. Bowser & Co., Toronto; Moffat Stove Co., Weston; and Gurney Tilden Co., Hamilton, have all arranged for space for exhibits at the Waldorf Hotel, which is to be convention headquarters.

Altogether about 25 manufacturing concerns are expected to make displays, in addition to which the jobbers will be invited to send their travelers to meet their customers and introduce them to each other. The officers of the association have figured on an attendance of 150, but several travelers have predicted that fully 250 will attend.

Special Railway Rates.

The railway companies will offer special rates as follows: If 300 or over, single fare, or if 50 or over, fare and one-third. Visitors must purchase a one-way ticket to Hamilton and ask the agent for a standard certificate, which, when properly filled in and signed by the secretary of the association at Hamilton, will allow the holder a return ticket free or for one-third usual fare, according to the attendance.

In addition to the Waldorf, which will be convention headquarters, the Royal and Cecil are first class hotels, and there are also several other reasonably-priced hotels. Rates at the Waldorf vary from $2 to $3.50 (American plan) the higher-priced rooms being supplied with baths.

Other Executive Business.

Several complaints sent in by members relating to unfair selling by manufacturers and small jobbers were discussed and the secretary instructed to write the parties concerned. The complaints will probably be taken up for discussion at the annual convention.

Trade Outlook for the Coming Year

What Prominent Men in the Trade Have to Say in Reviewing the Results of 1908 and the Outlook for 1909.

What does business look like for 1909?

Will there be an improvement over 1908, and how are things shaping in general?

Has the financial scare passed and is industrial activity being restored?

What was the result of last year's operations and the experiences of manufacturers and jobbers in different lines?

How do they view the business situation as a whole?

"Brighter and more hopeful," is the general verdict of business men and manufacturers for the year in which Canadians are just entering. A careful inquiry into the situation reveals the gratifying fact that confidence is strong and faith in larger operations reasserting itself. In some lines of industrial activity the past year has witnessed a falling off, other branches have held their own, and in a number of concerns increased turnovers are reported, but, on the whole, the volume of business in the manufacturing world was not as great as in 1907, when expansion reached the high water point. The past year opened with some forebodings. There was hesitancy, a tendency to conservatism and repression, manufacturers and jobbers not being exactly sure of the ground on which they stood. There are to-day many evidences of returning prosperity, a spirit of optimism is abroad, a better feeling exists and the future is considered bright. There are tangible indications of activity. Producers are not afraid to enter into big purchasing contracts. They are buying raw material on a much more liberal scale than they were a year ago. The retrenchment in many lines has had a sane, steadying, sobering effect, conservatism has replaced recklessness, collections are more promptly met, and every manufacturer finds himself "better in hand," so to speak. In times of depression certain interests are affected more than others, and it is cheering to record that in some concerns the turnover is ahead of what it was for the preceding twelve months. The consensus of opinion is that, with a moderate degree of caution, the revivifying effect of a splendid crop in the West, the general activity in fall building operation, after a rather lifeless summer, the state of affairs is satisfying. Commercially, Canada, which has come through the recent financial stress less scathed than any other country, is marching more rapidly now than for some months past on the road to prosperity.

There are many noteworthy features particularly with respect to the fact that the temporary "bad spell," as some pessimists were pleased to term it, has left no trace of ill-effects that will not be banished soon if they have not already disappeared. Conditions will, perhaps, not reach their wonted position and strength for some time, but Canada's industrial convalescence is in no danger of suffering from a relapse. The views of a few representative men in various enterprises have been gathered by Hardware and Metal on the operations of the past year, as well as the outlook for 1909.

The Plumbing Outlook.

H. S. Harwood, of the James Robertson Co., said that although the prices for baths, closets and sinks, as well as lead and iron pipe were lower than the year previous, the company had, in spite of this, done more business in 1908 than in 1907. so far as tonnage was concerned. He added that buying was never done very largely in the plumbing trade on a falling market. It was only when prices started to advance that dealers got busy and placed heavy orders. The fall months had been satisfactory, but as to the future the plumber was not in a position to speak with as much accurracy as other lines of business could, for the reason that no matter how active the past season had been, the months of December, January and February were always quiet in the plumbing line. The outlook, so far as he could gauge it, was encouraging. He had received already some good inquiries as to future delivery.

Stove Trade Forecast.

Mr. Kennelly, manager of the Toronto branch of the McClary Manufacturing Co., remarked: As to the future we regard it hopefully and believe that 1909 will be better than 1908. Signs point in that direction, and we have every reason to take an encouraging view. It is of course difficult to forecast the future, but a better feeling is certainly prevailing. As to our business, while our turnover in 1908 was not as large as in 1907, still, on the whole, we did not do too bad. I may tell you that 1907 was a record year, when we reached the top notch mark. Our sales last year were ahead of what they were in 1906—that is, our decrease, arising out of the state of the money market was not as great as was our gain in 1907 over that of 1906. I consider that all things taken into account we have more than held our own. The weather during December being so mild was hard on the stove and range trade. It was too warm for people to think of heaters, and, as a consequence, many retail dealers have a larger stock on hand than they like to carry at this season. Regarding furnaces, we have been exceptionably busy, our trade showing a big increase in this department over that of a year ago. The activity in the fall building trade is, of course, responsible for much of this, but some increase is due to dealers pushing the trade more actively amongst the farmers."

Increase Over 1907.

Mr. Francis, of Benjamin Moore & Co., remarked: "The prospects are good. We are running our factory to its fullest capacity, and have been doing so for the past two months. Our financial year closed in November, and our turnover was ten per cent. ahead of the previous year, while our orders in December were one-third ahead of what they were a year ago. Stocks generally are light. Collections have of late been satisfactory, and I might add that we have made some heavy contracts for raw material. We are looking forward to an exceptionally busy season in the paint line, and do not think we will be disappointed."

Things on the Mend.

Peleg Howland, of H. S. Howland, Sons & Co., wholesale hardware, was inclined to take a hopeful view of conditions for the coming year in view of the big harvest in the West. The farmers certainly appeared to have lots of money. Business in the wholesale hardware line, while not as large in 1908 as in the previous year, had come out better than expected. Mr. Howland was of the opinion that as stocks were light there was no reason why everything during 1909 should not be on a firm and more satisfactory basis. Collections were improving, and a more optimistic tone prevailed. The recent depression had not been nearly as protracted or serious as the stagnation of 1895 and 1896, the recovery being more rapid. Normal conditions would, of course, be not reached for some time, but things were on the mend. There was no occasion for pessimism so far as he could see.

The Business in Glass.

F. S. Hobbs, of the Consolidated Plate Glass Company, said: "The past year has been a peculiar one in some respects in our business. I never saw the glass business so dull as it was in July and August last. That gave the trade a setback, but it recovered largely during the fall months, and, on the whole, we find, after taking stock, that our turnover in plate glass is about the same as last year, while our output of window glass has been in advance. This has been brought about by the revival of the building operations. If it had not been for those particularly dull months in the summer the increase would have been much larger. On the whole, the prospects for the coming year are good, but,

of course, we can not tell definitely in our business which is contingent on the building trade. If that line is busy business in our line corresponds. The glass and building businesses are very closely related, the former being dependent to a large degree upon the other. Business in the mirror line is dull at present, and has been most of the year, although our factory was working full time during the past few weeks. As to the future of the glass market, stocks generally are light, and, as an evidence of confidence in improving conditions generally, I might say that we are buying largely in certain lines, not as a measure of protection, but of confidence that there is much encouragement ahead."

Optimism Again Prevails.

Mr. Ross, manager of the Pease Foundry Company, when asked what the results of the past year had been and the outlook for the coming year, said that the prospects were encouraging. The company has had some falling off in business in Western Canada, but in Ontario and the older portion of the Dominion the volume would slightly exceed that of the year previous. The depression in the building trade naturally effected the heating business during several months, but with the revival, which set in the fall and renewed operations in building, the outcome was encouraging. Conditions were rapidly assuming their former activity, and, best of all, a feeling of confidence now prevails. "I think," added Mr. Ross, "that the recent stagnation and the disciplining carried out by the banks is one of the finest things that has happened to this country. There was no doubt that as business concerns and as individuals we were living too extravagantly and putting on too much style. The experience has been sobering and steadying in its effect, and has led to the practice of much needed economies in the commercial world. Best of all now is the feeling of optimism that exists regarding the future and the tendency to the former order of things is strong. The crop in the West has gone a long way to set conditions aright. The stringency off there has brought about a decided improvement in business methods. One fact as to the future I may mention is that about 400,000 acres will be put under crop in Manitoba alone during 1909, and, taking in the other Western Provinces, fully a million more acres will be cultivated and sown than in 1908. The outlook is hopeful, from the standpoint of our business."

The Light Shines Bright.

Mr. Spencer, of the Rochester Lamp Company, said: "The outcome is encouraging after the recent slump. The depression did not make as great an inroad on our trade during the past year as we thought it would, and, after sizing up orders, we find that our sales, which are mostly in Western and Northern Ontario, have increased twenty per cent. over those of 1907. The recent stringency will have a steadying effect on buying and tend to make us all the more conservative. I think by the end of the present summer conditions in all lines will have become normal. On the whole, the prospects are bright and an optimistic spirit prevails. During the period from April to the latter part of September, in our collections, we had from twenty-five to fifty per cent. of our accounts returned uncollected, but during the past few months we have had all our bills met with the exeeption of about five per cent. This indicates pretty well how matters have improved. I might add that recently we have been selling at two per cent. off for ten days and net at thirty days, and it is surprising the number of our customers who have been taking advantage of the two per cent. concession. The bank has been remarking upon the fact, showing that there is evidently considerable ready money in the country. I look for a healthy, vigorous and most satisfactory trade during 1909."

Steady Tendency in Metals.

Geo. T. Peppal, of Samuel, Benjamin & Co., said: "The price of all metals has been pretty steady during the past year, particularly in tin. This I regard as a hopeful sign for the future. Prospects are certainly bright, and although the turnover in 1908 was not, speaking generally, as large as in the two previous years, all the metal men have done a fair average trade so far as I can learn. The reason that the volume of business was not as large last year as in 1906 and 1907 was that buyers bought heavily during that period and were kept busy during 1908 getting rid of accumulated stock and the foundries and machine shops, which consume lead, copper, spelter, iron and other metals, did not have occasion or opportunity to use as great quantities as formerly. This particular season is invariably a quiet one in ingot metals, but the tendency of the times is progressive and the tone hopeful. Stocks are now low and buying will be conservative. The situation is hopeful and confidence in good spring business is general."

Furnace Business Active.

W. H. Carrick, general manager of the Gurney Foundry Co., told of how they were just finishing stocktaking. The past two months, owing to the mild and unseasonable weather, had been a trying one on the stove trade, but the cold snap, now on hand, if protracted, would, he thought, still result in a good winter trade for base burners and ranges. The furnace business had been good—ahead of last year—and this was decidedly encouraging. In the stove line there had, owing to the doubtful financial outlook in the summer and the summerlike weather of the fall, been a falling off. In nearly all large enterprises where iron and steel were used, Mr. Carrick added, that so far as he had learned, the total decline had been about twenty per cent., and this was not so large after all when everything was considered. Regarding the future, there was cause for an optimistic feeling. With caution and the exercise of good judgment, there was no cloud on the horizon to obscure the steady return to former conditions.

The Stringency Has Passed.

John McConnell, president of Canada Glass, Mantels & Tiles, Limited, said: "We have more orders on our books than we had a year ago this month, and we are busy, not having laid off a hand. We have done an excellent trade during 1908 in mantels, grates and tiles. It will run ahead of the previous year, and even in plate glass we have no reason to complain. We are not afraid to buy goods so confident is our attitude for 1909. I believe that the New York stock market panic and the sudden action of the banks were largely responsible for the recent scarce, and that in many quarters it was more imaginary than real. It is speedily passing and the outlook affords every reason for confidence and increasing activity."

Business Normal Again.

"The first six months of 1908 were none too satisfactory," replied S. R. Kennedy, president of the Kennedy Hardware Co., Toronto, "but the last six months showed up splendidly. November and December particularly were better than any in the preceding fifteen months. Altogether, 1908 was ahead of expectations."

"What about the coming year?"

"I think prospects are very bright. Collections have been good for some time and the retailers who have visited us since the holidays say that 1908 was as good a year as any they had experienced. These men were chiefly from the farming districts, and they seem to know nothing about the recent depression other than what they have heard. Business is about normal again, and I see no reason why 1909 should not be as good as any in recent years."

Lumbering Trade Dull.

C. Shirly, of Shirly & Dietrich, saw manufacturers, Galt, in reply to a query regarding the business situation, said that although last year had been an unsatisfactory one for lumbermen, his company had been able to maintain almost their complete working force by reducing the hours of work. As he points out, industry must quicken shortly and good saw makers must be retained when once secured. Mr. Shirly said the decrease in building had hit the lumbermen and yards were full. Stocks, however, would run low this season, and the demand for saws is already showing a good increase. The lumber and saw industries are feeling the effect of the increase in the use of cement and metal in buildings, but a large export business is being done and the increasing number of saw factories in Canada indicates that the lumber industry has a long lease of life ahead in the future of Canada.

Turn for the Better.

H. K. S. Hemming, of the Hemming Manufacturing Co., Montreal, said: "Much of our business is done with jewelers, not merely in Canada, but throughout the West Indies and South

America. As our goods are luxuries, we shall probably be the last to feel the improvement in business. Still, we can truthfully say that during the last six weeks, there has been a decided turn for the better, not merely in orders, but in collections. So far as the hardware trade is concerned, the Auto-Strop Safety Razor is the only line in which we are interested, and in it, owing possibly to the advertising campaign that we have lately started upon, the demand has improved to such an extent that we have been altogether unable to cope with our orders. In our opinion, Canada would not have suffered from the financial stringency had it not been for the short-sighted policy of the Canadian banks, who took fright from the panic on Wall Street and checked the wheels of commerce from one end of Canada to the other. If they had taken an encouraging stand with our largest manufacturers and wholesalers, Canadian trade would have been normal in 1908. We believe that 1909 will be far ahead of the twelve months just passed."

1909 Will See Revival.

J. G. Lewis, of Lewis Bros., Montreal, states: "November 30 was the end of our business year and everything considered we are pleased to say that the year has been a very satisfactory one. While we have not done as much business as we did in 1907, still the business is of a more satisfactory nature—all the orders that we received this year were for goods that customers actually wanted—there was no speculation, and people erred on the short side, and our opinion is that the stocks on hand to-day are lighter than they have been in this country for many a year, as a consequence we predict that 1909 will see a revival in trade as great, or even greater, than 1907. We base our opinion particularly on the amount of goods we have already sold, for at this time last year we had not taken one-tenth the number of orders that we have on file to-day for shipment in the spring, and orders we receive daily are larger and the way customers write shows that the old confidence has returned and instead of the quarter dozen lots that were on order last spring, customers are buying full packages. We are making preparation for a good year, and our advice to the retail trade is to place orders early, only buy what you require and we are confident that you will see much higher prices."

Trade Will Steadily Improve.

G. C. Davis, of Frothingham & Workman, Montreal, said that all indications pointed to an early spring trade. Reports from different parts of the country showed that stocks were light, and there was, therefore, every reason to believe that trade would be brisk and most encouraging. "I do not think that business will go ahead with a rush at first, but it will steadily improv as time goes on. I look with all confidence on the future, and believe that the year will be a good normal one if not a record."

No Immediate Boom.

J. R. Kinghorn, of the Montreal Rolling Mills, was satisfied that prospects were undoubtedly bright for the year. "I do not think that there will be any great immediate boom, but as a rolling stone gathers impetus, so trade will increase until every industry will be working at full pressure. I look for a steady improvement with the stability that would not be given if trade were to give a sudden jump. Considering everything, we have had a good fall season, better than we anticipated, and we look forward to a most successful year. If there had been no attempt in the States to unduly boost things around the Presidential election, I believe trade there would now be showing much greater strength."

Paint Manufacturer Optimistic.

"The cry of 'halt,'" said W. H. Evans, of the Canada Paint Company, Montreal, on being interviewed on the situation, "which started about October, 1907, lead to the word 'caution' being strongly in evidence in all mercantile communities throughout Canada. The money stringency which ensued was kept up to a more or less extent for fully six months. The warnings from the banks and others had the effect of making manufacturers, jobbers, and retailers 'go easy' for a long period, and the sign, metaphorically speaking, was hung up bearing the words 'Buy Light.' This injunction seems to have been faithfully followed throughout the year of 1908, and it has had the effect of so reducing stocks that it is thought 1909, while not experiencing any great rush, will be a remarkably good year. Staples of all kinds have kept fairly steady—the pendulum as regards prices has only swung within a narrow radius. The two corroding factories of white lead in Canada have enabled the grinders to keep in ample supply and the importations of dry white lead have consequently been light. Linseed oil has seen but slight fluctuations compared with past years, and the oil crushing plants in Montreal, Winnipeg and Ontario have kept the market in ample supply with a good class of clear, bright, linseed oil of desirable uniformity. Turpentine seems to have been removed from the arena of speculation having kept at a moderate price with remarkable steadiness all the year, the call, in consequence, for substitutes has been lessened. This, of course, has been disastrous to companies which were formed for distilling turpentine from stumps, pine knots, etc. It is a great source of gratification that the depression. which is now happily past, has not been marked by any great failures of moment. The shortening of sail seems to have been done with remarkable carefulness, and the year stands out in striking contrast compared with cycles of depression which have been met with in other years, and speaks highly for the elasticity and general solvency of the Dominion. Manufacturers generally are optimistic regarding the prospects for this year, and while it is understood that they will 'step out' carefully, they expect to have their business well in hand in order quickly to be able to take advantage of a revival which is certainly anticipated. The country is full of latent wealth which only needs the magic touch of commerce to make it flow into general circulation."

Advertising Increased Trade.

A. A. Bittues, managing director of Gillette Safety Razor Company, of Canada, Montreal, was quite aware that trade has been bad in a great number of lines for a portion of the past season. "We firmly believe, however, from the reports of our travelers who are covering the territory from coast to coast, that trade in 1909 will be much more healthy. From our own standpoint, judging from sales, we can make no complaint. Our business has exceeded last year by some 9 per cent. This, however, is, to our mind, no barometer, being a specialty line. Money is being moved throughout Canada, and its movement will directly assist every branch of business. That we may meet with the coming year, we have almost doubled our machinery complement and sincerely feel that our investment will be fully returned to us by the demand of the dealer and the public. It would be well for every dealer to exhibit a spirit of caution in purchasing, however, that there may be no repetition of past business troubles from over-stocking. We take this opportunity of thanking Hardware and Metal for most ably placing before the trade our ads. Our statement above, as to our own trade, is largely based on the feeling that every dealer has for a trade paper of your calibre."

1909 Will Be Best Year.

C. C. Ballantyne, managing director of the Sherwin-Williams Co., Montreal, feels not only very hopeful, but enthusiastic about the business outlook for next year. "The way that Canada withstood the past year's financial and business depression is another striking evidence of this country's solidity and sound financial and business condition. The crop throughout the country this year has on the average been very good, and with money easy, confidence stronger than ever, and stocks light, I firmly believe that 1909 will be the best year that Canada has ever had. Evidence of this has already shown itself by the way that the manufacturr, wholesaler and dealer are purchasing their requirements for the coming year. Nothing short of a great calamity, which I trust will never overtake this country, can prevent her continued rapid development and progress."

Confidence is General.

Charles E. Wood, of the Dominion Cartridge Company, Montreal, believes that we are about to enter upon a period of prosperity which will be unparalleled in Canadian history. "There is now," said Mr. Wood, "a confidence in Canadian goods that did not exist some time ago. This country has gone through the same experience that beset the United States in the past, when imported goods

were considered superior to home-made ones, and the latter were often stamped 'Imported,' so as to overcome prejudice. But here, as in the States, all this had been done away with now, and Canadian goods are considered, and rightly so, as equal to any in the world's markets. The prospects in our line of business are very good indeed. The Canadian field, although growing, is somewhat restricted, but our business extends all over the world, and is developing most satisfactorily."

A Tilley, vice-president of the J. H. Hanson, Tilley Co., Montreal, said: "In our opinion the outlook for the year is very bright, and we look forward to a good business in all lines. Reports from every manufacturer indicate that they are preparing for a good demand. Stocks are low, and trade is bound to follow."

Preparing for Good Demand.

Alex. McArthur & Co., Montreal, state: "If the prospect for business next year may be judged by the volume of business during the past year we cannot but regard the outlook as most hopeful and satisfactory. There is every evidence of considerable activity in the building trade all over the country."

A. E. Gilverson, one of the principals in the old firm of Rice Lewis & Son, Toronto, said that while a disastrous fire had interrupted his firm's business somewhat they had experienced a very satisfactory year and the outlook for 1909 was very bright. Mr. Gilverson stated that he had been connected with a large contracting business for several years and his experience was that the 1908 building trade, while not as great in volume as the previous year, had been equally satisfactory. The contracting firm in question, he said, had erected 160 houses in Toronto in 1907, averaging in price at about $2,500, while 80 averaging about $3,000 had been built by them in 1908. He looked for a large increase in the building trade in 1909 and felt that manufacturing would also be on a much larger scale.

HARDWAREMEN IN MUNICIPAL ELECTIONS.

Several Ontario cities and towns will have hardwaremen as chief magistrates for 1909, among these being London, where S. Stevely was re-elected Mayor Chatham, where W. H. Westman was chosen; Belleville, where L. W. Marsh, foundryman, won out; Hespeler, where George D. Forbes, vice-president of the Taylor-Forbes Company, Guelph, was elected; and Stayner, where J. E. Doner headed the poll. At Guelph, George Penfold tried for the mayorality unsuccessfully and at Durham William Black escaped election by 24 votes.

Mount Forest re-elected W. G. Scott as Water Commissioner; Kincardine chose P. Shields as Water Commissioner; Gananoque for the fourth time elected C. E. Britton, of Cowan & Britton, as reeve; Toronto selected Albert Welch as an alderman, while F. G. McBrien failed of election by 12 votes; London re-elected Robert Parsons and defeated Ald. Armstrong and Scarlett;

G. W. ARMSTRONG, LONDON.

A Brass Manufacturer, Who Failed to Secure Election as Alderman for 1909.

Hamilton re-elected A. J. Wright and Hugh C. Sweeney; Brantford defeated W. R. Turnbull for alderman and elected M. Cutliff as school trustee; Arthur honored D. Brocklebank; Colborne, H. J. Morden; and Midland, Chas. E. Hartman with seats in the town council.

L. W. MARSH, BELLEVILLE,

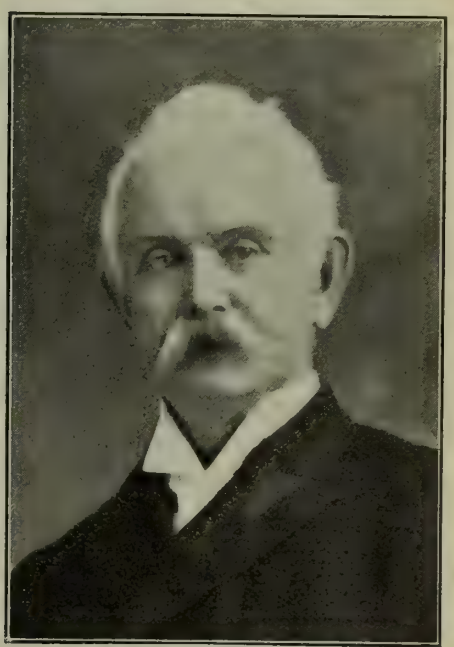
A Foundryman Who is Mayor of His City and Major of His Battalion.

As the daily newspapers have not given thorough reports of the elections it has not been found possible to compile a complete list of the hardwaremen who are serving their fellow citizens in the various municipalities and Hardware and Metal asks its readers to forward the names of any who have been overlooked.

Hardwaremen owe it to themselves to take an interest in public affairs and they will find that the expenditure of a limited amount of their time in this direction will broaden their vision and make them better merchants as well as better citizens.

DEARER BROOMS AND WHISKS.

There has been a sharp advance in the price of broom corn, according to advices received from Chicago. The quotation has gone up during the last few days from $80 and $90 per ton to



C. E. BRITTON, GANANOQUE,

Who Has Been Elected Reeve for the Fourth Year by Acclamation.

$140. The reason given is that the crop has not turned out as well as expected. During the early part of the season the harvest of broom corn in Illinois and all the intervening Southwestern States as far as Nebraska looked to be heavy. The returns are, however, disappointing, and it is now discovered that there is a considerable shortage to what was expected and it is said that speculators have taken advantage of this and raised the price. The figure in Toronto has gone up seventy-five cents a dozen in view of the sharp advance in broom corn and local dealers have withdrawn all quotations for the present. This means that the housewife who, until the present, obtained a good broom for twenty-five cents and an exceptionally serviceable one for forty cents will have to pay at least thirty-five cents for an ordinary broom and forty-five or fifty for one of the better sort. It is intimated that the price may go even higher.

Hardware and Metal Markets

(For detailed prices see Current Market Quotations, page 66.)

MARKETS IN BRIEF.

Montreal.

Bolts—Higher prices.
Paris Green—New list.

Toronto.

Bolts and Nuts—Prices re-arranged.
Stove Bolts—Advanced.
Old Material—Some advances.
Paris Green—Lower prices.

MONTREAL HARDWARE MARKETS

January 8.—The after-holiday dullness has been besetting the markets this week and trade has been very quiet. A few repeat orders for skates, hockey sticks, and one or two other seasonable lines have been received, but needless to say the shipping departments have not been over taxed. Many travelers are still at headquarters, not having finished with their samples and price book work, while most of the houses are going over their stock and posting up for the American travelers. Buying will be heavier this year for all are agreed as to the brightness of trade prospects. Just now retail merchants should be preparing to go over their stock. This is the best month of the year for the work and the sooner it is done the better the chance of placing complete requirements with the travelers, thus saving much time and trouble later on.

Booking ahead is still quiet, although ice cream freezers and lawn mowers are commencing to move a little, as well as green wire cloth and screen door hinges.

BUILDERS' HARDWARE —Builders' hardware has been quiet. The break up of the cold weather has enabled building operations to be pushed on rapidly, and the local trade has been stimulated somewhat, but until dealers have thoroughly gone over their stock orders will be on the light side. We quote discounts at 50 and 10.

SPORTING GOODS—A few repeat orders have come in for skates and hockey sticks, but the change in the weather will not improve trade locally. Other lines are slack. Prices are unchanged.

HOUSEHOLD UTENSILS — Carpet sweepers after a good holiday season are slack but will probably look up again in a week or so. There is little life to wringers, washing machines, and food choppers. Tinware has shown a little more stimulation in the last day or so. The market is unchanged.

SPRING LINES—Booking ahead is still on the light side, and until the travelers get to work in earnest there will probably be little stimulation. Still however there is a movement in ice cream freezers, lawn mowers, green wire cloth, poultry netting and screen door hinges. Other lines should now soon follow as an early spring trade is generally expected.

SCREWS—A slow movement is apparent in screws, and any stimulation is not expected until business swings round again. We continue to quote discount at 85 and 10 off for flat head bright; 80 and 10 off for round head bright; 75 and 10 for flat head brass, and 70 and 10 for round head brass.

LUMBERMEN'S SUPPLIES—For a time being the movement in these lines has been checked and but small repeat orders have appeared in axes, axe handles and boot calks.

BOLTS AND NUTS—New price lists have been issued in bolts and nuts, change being made in carriage bolts, fin head bolts, sleigh-shoe bolts, coach and lag screws. Discounts on carriage bolts ⅝ and smaller are now 70 and on coach screws 75. Undoubtedly the growing strength of the United States markets has induced these advances in prices.

TORONTO HARDWARE MARKETS.

Toronto, Jan. 8.—The year has opened with most factories fairly busy on orders for spring delivery and while booked business is lighter than two years ago it is ahead of 1908 and the outlook is far brighter, general confidence being felt in the prospect for trade during the coming season.

During the past few weeks more attention has been given to selling than to buying and even now stock-taking is attracting first attention. Seasonable lines, however, must be stocked up and attention must also be given to booking for spring delivery in such lines as lawn mowers, ice cream freezers, fence wire, wire cloth, screen doors and kindred lines. The destruction by fire of the large screen door factory at Paris has given rise to a feeling that orders for these goods should be booked early in order to ensure delivery but there appears to be no reason for unrest on this score as the Sanderson-Harold Company state that two large warehouses containing stocks of doors and windows were untouched by the flames. This supply will, it is understood, take care of the early spring business, while the reconstruction of the plant, already undertaken will look after the needs of the later business.

Jobbers report that orders placed since the opening of the year have been very encouraging. Stocks have been light as a result of careful buying and with increasing business in sight and last year's totals showing up more satisfactorily than expected, buying will likely be done more freely for goods for spring delivery.

SEASONABLE LINES — Winter sporting goods, snow shovels, carriage heaters and other cold weather goods are being called for in fair quantities. Skating and hockey have been very popular and sales have been large while snow has hardly been plentiful enough to move toboggans, sleds and snowshoes in large volume. Snowshovels, too, have dragged in some districts but the cold weather has encouraged a movement in carriage heaters.

SPRING GOODS—Lawn mowers, ice cream freezers and screen doors and windows are coming to the front in booking orders. Common screen doors are qnoted at $7.80 for stained and $8.10 for grained.

HEATING AND LIGHTING—A fair demand continues for heaters and cooking utensils. Lanterns and lamps are also selling in seasonable quantities. Cold blast lanterns continue at $6.75.

CEMENT—Cement manufacturers report stocks large and prices of Canadian Portland still at $1.70 per barrel f.o.b. Toronto, with usual allowance for return of bags.

HEAVY GOODS—A new list on bolts and nuts has been issued showing little change in price. The changes make some lines slightly lower but the revision is really a simplification of discounts, several sizes of bolts which were quoted separately now being grouped under one discount. Bar iron is unchanged at $1.95. Stove bolts have advanced to 80 and 7½. Bright and steel wood screws, flat, 85 and 10, and round head 80 and 10 per cent. Brass screws are flat, 75 and 10, and round, 70 and 10.

WIRE—New prices on barb wire f.o.b. Toronto are: Galvanized barb, $2.85, and plain twist, $3.20. Coiled spring wire continues at $2.75 f.o.b. Toronto for No. 9. Galvanized wire is quoted at Pittsburg, instead of Cleveland, base sizes, 6 to 9, $2.25. Less than car lots 10c higher. Wire nails are unchanged at $2.30; poultry netting at 60 and 2½, and green wire cloth $1.70 in 100-foot rolls.

MONTREAL METAL MARKET.

Montreal, Jan. 8.—Despite dull conditions generally, trade locally this week has been very fair, and in consequence a cheerful tone is apparent in the markets. All the metals have received their share of attention, while the inquiries seem to promise good business in the near future. Very little metal is being held in stock. Every pound purchased seems to be going into the finished article, so that the situation is in a very promising state indeed. The markets for the time being are firm, showing an upward tendency but there is no change in quotations. Upon the course taken by the primary markets depends the continuance of this firmness. So far as the Canadian situation is concerned everything is in good shape. There is a strong feeling of confidence, and all that is necessary now is for the outside markets to show better strength.

So far as the primary markets are concerned, copper seems to be working

for a higher basis, although at present the movement is purely speculative. Whether the demand will support it remains to be seen. London prices have shown increased strength. Tin has fallen away slightly, but at present the market is somewhat featureless. Spelter is regaining strength again, and looks to be in good shape. Lead is still as puzzling as ever. The market made a jump early in the week but fell away again. Iron and steel conditions in the Old Country are showing better strength, the probability of Germany again being a heavy buyer, strengthening the markets. The situation in the States is quiet but the strength of both iron and steel is being maintained.

PIG IRON—Canadian furnaces are reported as being well occupied with orders. There is a decidedly strong feeling with regards to prices. The change in the situation is apparent from the fact that two or three months ago Canadian makes could be secured in Montreal at $17.50 to $18 per ton, whereas fully $1 to $1.50 more per ton is now being asked. Western furnaces have also advanced their prices by fully as much per ton. Fair orders have been received for imported pig, and the following prices are still in vogue: Middlesboro No. 3, $19.50; Summerlee No. 1, $21 to $21.50; No. 2, $20.50. English advices state that steel and iron conditions are now more promising. The improved conditions in the United States, combined with the approaching change for the better in Germany, have had the effect of strengthening makers' and holders' views. Prices are firm with an advance being wanted for future deliveries. Cleveland warrants are quoted at 49 shillings. Scotch makers are in a fairly strong position, there being little stocks on hand, while the demand is of fair strength. The situation in the States is quiet but firm. Deliveries are stated to be proceeding at a satisfactory rate. Conditions are undoubtedly ripe for a large volume of business.

TIN—Although conditions are generally dull tin has not been inactive this week, and fair business has been done. The market is firm, and we make no change in our quotation of 33c for small jobbing lots. Tin in the primary markets is at present somewhat featureless. The metal is reported as having a firm feeling, but in the absence of a strong consuming demand it is hardly safe to rely too much on present figures.

COPPER—Copper has sold fairly freely this week at the unchanged jobbing quotation of 15½c. Inquiries are coming to hand, and there is evidently a more general desire to gauge the market than has existed for some time. The effort being made in New York to put copper on a higher basis has evidently stimulated inquiries. Real buying conditions in the States continue dull.

SPELTER—Spelter keeps unchanged at $5.50. The market is firm and a fair amount of business has been done. The English market shows continued strength and there is evidently a good purchasing movement on. St. Louis keeps well up to the $5.05 mark.

LEAD—Lead is unchanged with fair business showing. We quote imported pig at $3.70. The English market showed a jump early in the week, but fell away again. Buying conditions across the Atlantic seem very dull.

OLD METALS—The market is quiet with no change in quotations. Heavy copper and wire, 11½c; light copper, 10¼c; heavy red brass, 10½c; light brass, 6¼c; heavy lead, 2½c; wrought iron, $11; No. 1 cast, $12.50; No. 2 cast, $9.

TORONTO METAL MARKET.

Toronto, Jan. 8.—The present is a quiet time in the metal market and it is too soon after the holiday season to engage in any accurate forecasts. Generally speaking, there has been no change in prices for some time, so far as the local situation is concerned. A few orders for immediate delivery are being placed but orders for spring shipments are not numerous. Quotations are the same for small jobbing lots as last week. Nearly all the foundries and machine shops are taking stock but there is evidence that many plants which are on short time, will shortly be taking on larger staffs or working longer hours. The indications are that the iron and steel interests will do more business in 1909 than they did in 1908 as. in Canada for the present year, nearly 5,000 miles of railway are planned or under construction. The copper market is strong and a movement has been started in New York to advance prices, but sellers are shy about making offers or sales.

A prominent New York producer of copper says: "There is little basis for the stories of huge sales of copper over last week. The copper market is showing signs of strength in London. and there has been some improvement in the local demand. However, there are indications that we will get a buying movement in the near future. This may come within the next week or two. An exaggeration of the buying movement will tend to do more harm than good."

Tin shows a tendency to weaken on the English market, according to the latest advices. Any advances or falls for some time have been only fractional and have resulted in no changes locally.

PIG IRON—The outlook is considered fair. There is but little likelihood of change for the present. According to Pittsburg advices, if there are to be no reductions in prices during 1909 there will be no sharp advances. The tendency will be to maintain prices on the present level so as to encourage trade. It is believed the last half of the year will show a greater increase in demand than the first half. The mills that have been at work are not fearful of having to close down any week as they were formerly. They have orders enough to keep them in operation and specifications are also coming in to maintain a steady run with those in operation. The quotations still are: No. 3 Middlesboro, $21; Cleveland, $22; and Canada Foundry, $18.50.

COPPER—The tendency to mark up prices is abroad. Local handlers say there is talk in New York of half a cent advance but it is believed this will not come, not yet, at any rate. The selling price is still 15½c.

TIN—Shipments from the Straits for December were 1,404 tons larger than for the same month of last year. For the twelve months of 1908 the increase in shipments amounted to 8.032 tons, compared with the same time last year. The price has been steady of late and the demand at the time of writing is light with slightly downward movement in English quotations. The price is $31 to $32.

LEAD—The market is strong in London and New York and the outlook is better than for some time. The foreign advances have not affected the local price, which is $3.80 for imported pig.

SPELTER — The situation remains the same and $5.50 is still the local selling price. There have been no heavy movements in ingot metals locally for some weeks.

SHEETS AND PLATES—A few orders are being placed for spring delivery and the outlook is regarded favorably. There is no change in quotations.

OLD MATERIALS—Local stocks are fairly heavy and business is beginning to move some as the dealers have to keep material turning over if they desire to make a profit. Copper wire is slightly higher in price. The following are dealers' buying quotations: Light copper, 11c to 11⅛c; heavy copper wire, 12¾c; heavy red brass, 11 to 11¼c; heavy yellow brass, 8¾c to 9c; light brass, 6½c to 6¾c; heavy lead, 3c; zinc, 3¼c to 3½c; No. 1 wrought iron, $10; stove iron, $12; machinery cast iron, $14; rubbers, 8c to 8½c.

U. S. IRON TRADE.

Cleveland, Jan. 7.—The Iron Trade Review says: Generally, the iron and steel market is quiet, but there is a spirit of expectancy shown that is keeping makers in a cheerful mood. The doubt over the extent of the likely revision of a tariff continues to inject uncertainty into the situation, which is keeping buyers within cautious limits. Some iron and steel makers, because of this questionable factor, express the belief that the first half of the year will witness but few price changes, if any, in finished material, although it is firmly expected that there will be a gradual increase of business over this period. The generally accepted view is that the last half of the year will find the industry running close to normal lines.

The pig iron market is now showing much renewed life, but prices continue fairly firm. The progress which has been made toward the resumption of normal conditions in the iron business is indicated by our blast furnace statistics, which show that the production of pig iron for the first half of the year was 6,789,463 tons, while for the second half the production was 8,885,123 tons. For December, the production was 1,-

722,557 tons, an increase of 140,243 tons over November.

U.S. METAL TRADES.

New York, Jan. 7.—The monthly pig iron statistics collected by The Iron Age indicate a tendency toward increased output which may give rise to some misgivings. On the first of the year there were in operation 220 coke and anthracite blast furnaces whose weekly productive capacity figured up to 400,894 tons, or at the rate of 20,800,000 tons for the year. On the first of December 210 furnaces were blowing with a capacity of 381,000 tons per week. Among the new producers are the two Gary stacks, whose make, of course, does not immediately go into consumption. Still, the expansion in output does not appear to harmonize well with the reports of the development of activity in the finishing industries. If it were possible to collect statistics of the stocks of pig iron at the furnaces, they would have a better means of judging whether optimism has got the better of the iron makers, and whether they are not in danger of overdoing the resumption to normal.

Although it is only fair to state that the new year is not yet fairly launched, still the feeling is gaining ground that new business in finished iron and steel is not coming up to expectations, moderate though they were. The railroad orders particularly are lagging, and in other channels of consumption there is a lack of snap.

In the struggle between the dealers in old material and the mills, the latest developments seem to favor the latter slightly and in some leading markets the tone is a little weaker.

HARDWARE TRADE GOSSIP.

Ontario.

C. M. Ruggles, of Ruggles & Ruggles, wrench manufacturers, Batavia, Ill., called on Rice Lewis & Son, Toronto, this week.

Harry Willford, dealer in stoves and tinware, St. Catharines, has assigned to Albert H. Trapnell. A meeting of creditors will be held on Jan. 15.

F. W. Moses, of the Cobalt Hardware Co., Cobalt, who has been visiting his old home at Caledonia, called on Toronto friends on Tuesday accompanied by his wife. Mr. Moses has great hopes for the future of the Silver City of the North, and says trade is already opening up for the coming season.

Quebec.

A. J. Woods, of the Montreal Rolling Mills, Montreal, spent a few days in Toronto during the week.

F. Wilkinson, vice-president of B. & S. H. Thompson, Montreal, is taking a three weeks' trip to Winnipeg.

G. W. Dunn, representing Lewis Bros., Montreal, in the Sudbury district, and his wife, have been visiting Montreal.

The Royal Polish Company, Montreal, have removed into larger premises, on the corner of St. Paul and St. Nicholas.

Elliott Weston, of the Hamilton branch of the McClary Mfg. Co., is recovering from a severe illness which has confined him to his home at London for several weeks.

C. L. Devitt, representing Lewis Bros., Montreal, at Ottawa, has been visiting Montreal, accompanied by his wife.

Lieut.-Col. W. M. Gartshore, vice-president and general manager of the McClary Manufacturing Company, London, was in the city this week on business.

Fred. E. Ellis, lately with the Gurney Foundry Co., has accepted a position with the Gurney-Tilden Co., Hamilton, and will cover the territory west of Brantford and to Windsor and Goderich, making London his headquarters.

R. B. Cherry, of Sargeant & Co., New York, has been in Montreal introducing Mr. Ball, who is taking charge of Mr. Cherry's old territory. Mr. Cherry will stay at headquarters in charge of the lock department.

G. C. Dufresne, who has been in the sample room of Lewis Bros., Montreal, for the last two years, is starting out as a salesman, making his headquarters at Fraserville. His place in the sample room will be taken by R. F. Warren.

Harry Field, who recently sold his hardware business at Cobourg to Barfett Bros., has been elected Mayor of that town for 1909. Mr. Field is now a member of the firm of Field & Brothers, the oldest dry goods business in Ontario.

David Brewer, who has been with Caverhill Learmont & Co., Montreal, for eight years, has been presented by his fellow employees with a traveling bag on the occasion of his resignation to take up a new interest in the West. Mr. Brewer was an able salesman and generally liked, and the staff were sorry to say good-bye to him.

Western Canada.

A double wedding took place last week at the home of A. H. McKeown, hardware merchant, Lethbridge, when two of his daughters were married. Miss Hazel to Thos. A. Hornibrook, of Calgary, and Miss Grace to Andrew Tilley, of Lethbridge.

J. G. Hopper, formerly hardware merchant of Arcola, has opened up in the hardware business at MacLeod, Alberta. Mr. Hopper has been in Nelson, B.C., during the past two years.

Harold Hayr, head of the Hayr Transfer Co., Lethbridge, and a brother of Arthur Hayr, of the Hayr Hardware Co., of that city, passed away recently in Lethbridge.

ENLARGING RULE FACTORY.

J. A. Hossack, sales manager of the Lufkin Rule Company, of Canada, Windsor said that last year was the first in which their Canadian factory had been operating. Results had been far greater than expected and so great had the demand for their goods increased that a large extension of 160 feet is now being made to their factory. Arrangements are also being made to weave their tapes in Canada and much of the space in the enlarged plant would be taken up by the introduction of new and improved machinery, both for tape weaving and for the manufacture of several new lines they have taken up.

From a Travelers' Viewpoint.

A traveler of wide experience declared that in his eighteen years' connection with the trade he had witnessed three seasons of stringency. That of 1907 was less protracted and severe than the former two and confidence was more easily and rapidly restored. It would naturally take some time for affairs industrially and commercially to get back to normal. The scare has passed and the incoming year should pretty well be up to that of 1907 in the volume of business.

"Our firm is taking on more men and are getting pretty busy," he added, "and unless something unforeseen occurs there should be no cause for worry. When dull times occur and sales fall off the jobber is hit harder than the manufacturer, for the simple reason that the latter lays off hands and curtails his output, while the jobber in putting in the plug may find himself with big stocks on hand. Relatively speaking, it costs him just as much to do $300,000 worth of business as it does double or triple that amount. It requires just as many employes to pack, fill and ship orders of quarter-dozen and half-dozen lots as for the larger packages of a dozen usually sent in by the travelers when times are good and things are on the move.

"You will find that periods of depression come in cycles. There is a falling off in the price of iron bars, plates and sheets, which gradually affects tin, copper, lead, etc., until things touch bottom. Then a change sets in after a while, prices ascend and keep climbing higher until the top rung is reached. There they stay for a while, perhaps a couple of years, and everybody crowds on full sail. The tendency is to get reckless, order extravagantly and reach for all that is in sight. The result is overstock—a slump. Again comes a day of reckoning, sales fall off and the bottom of everything appears to have dropped out. We are now regaining former activity and although business in 1909 is not likely to equal the record of 1907, the outlook is good."

LIKELY ADVANCE IN BROOMS.

There is a possibility that an advance will shortly be made in the price of brooms, The broom-corn crop in Illinois and in other States has fallen short of the average during the past season and in addition to this, it is stated that this crop has been cornered by Chicago firms. Chicago broom makers have advanced the price of their products 50 cents a dozen and a similar advance is expected in Canada in the near future. If the supply is as short as the market indicates and if the corn crop has been cornered as is rumored, the advance in brooms in Canada will probably be 75 cents per dozen.

THE METAL SITUATION.

With the opening of the year comes the momentous question—How soon will the metal situation of the world show the reviving influences of a strong consuming demand? For months the tone of the markets have been kept up by the belief that early in the new year orders would become brisk and heavy. Speculators have bulled and beared the markets, exaggerated reports to suit the occasion have been bruited about, but through all these ups and downs producers and large holders have held firmly to prices. It has been the case in copper, in tin and in a lesser degree in the other metals. Particularly in copper has this confidence in the future been strongly manifested.

Despite production running at record figures, exportations falling off in the latter months of the year, and no compensating increase in consumption there has been no very marked weakness in New York copper figures. Sales have not been forced, nor has there been any desire to accept contracts ahead at the market prices. In fact, there has been all the way round a marked desire to wait for the confidently anticipated revival in demand.

There was every reason to believe that heavy consumption would set in. Industrial activity had been giving promise of greater momentum in the new year, money had become easier, while stocks in users' hands being practically nil, a strong demand for the finished article would necessitate an immediate heavy buying movement. The railroad economy for the year was yet another great and good reason why 1909 should be fruitful. In these circumstances, it can hardly be surprising that the markets, generally speaking, have entered upon the new year with commendable stability, and in fairly good shape.

But there must be no undue delay now in the appearance of this consumption. Production is going ahead, large holders cannot for ever keep off the market, and although any strong inflation of prices, any squeezing of the consumer would be prejudicial to the best interests of general trade, yet a strong buying movement is essential, even for the maintenance of the present strength of the markets. The stronger the consuming demand the better the trade of any country must be, and with heavier buying in the markets, after discounting speculation, there will be the satisfaction of knowing that industrial activity is working at greater pressure. In the general interests of trade, therefore, a revival in the markets is imperative, and the sooner the better.

SAFEGUARDS AT HOTELS.

In accordance with the announcement made by Hon. W. J. Hanna, Provincial Secretary, at the annual banquet of the Commercial Travelers' Association, that an appointment would shortly be made whereby the fire escapes and sanitary arrangements of hotels would be looked into, the Ontario Government has not been long in giving effect to the declaration of Mr. Hanna. This week W. K. Snider, who has been Provincial Conservative organizer for some years, has been selected as a special commissioner to investigate and deal with the whole question of the condition and equipment of the licensed hotels throughout the Province. The appointment is a new and important departure, and is in accord with the strict policy of law enforcement which the department is seeking to inaugurate.

Mr. Snider will take entire charge of all improvements that the commercial travelers have been urging upon the department. These include such equipment as fire escapes, sanitary arrangements, bedding and accommodation for transients. The commissioner's work will probably cover between one and two years, during which time it is anticipated that he will have established such standards for hotels as can be continued permanently.

ACKNOWLEDGMENTS.

The editor of Hardware and Metal wishes to acknowledge receipt of photographs in the Christmas Window Contest from the following firms: Vokes Hardware Co., Toronto; Johnston & Co., Brandon; Taylor Bros., Carleton Place; Geo. W. Ecclestone and J. L. Fenn, Sons & Co., Bracebridge; A. H. Hatch & Co. and J. A. Flett, Vancouver; Orillia Hardware Co., Orillia; Peart Bros. Hardware Co., Regina; Williams Bros., Gladstone; Kingan Hardware Co., Peterboro; Dakin Bros., Digby, N.S.; R. Chestnut & Sons, Fredericton; P. Hymmen Co., Limited, Berlin; R. F. Johnston, Acton; F. O. Sanders, Boissevain; Thompson & Sproul, Orangeville.

The receipt of copies of Christmas advertisements is also acknowledged from the following firms: R. F. Johnston, Acton; Peter Hymmen, Berlin; J. S. Mitchell, Sherbrooke, Que.; Hurd & McBride, Ottawa; Ashdown Hardware Co., Calgary; Gilpin Bros., Hardware Co., Collingwood; Brace, McKay & Co., Summerside, P.E.I.; J. L. Fenn & Co., Bracebridge; C. C. Falkiner & Co., Winnipeg; John Bailes & Co., Oshawa; C. B. Miner, Cobden, Ont.; Burks Falls Hardware Co., Burks Falls; Sanders Hardware Co., Boissevain; McGregor & Co., Caledonia; A. W. Humphries & Son, Parkhill; Williams Bros Co., Gladstone, Man.

NAME THE PROVINCE.

In these days of the rapid development of Canada, which is particularly noticeable in the West, where new towns are springing up every day, wholesalers are having some difficulty in keeping track of all their customers. This is particularly so when the latter's stationery bears no mark to distinguish the Province in which his business is situated. There are hundreds of little towns in the various Provinces of Canada with similar names, or again, towns which are so new that their situation is not yet familiar.

The suggestion has been made and it seems a good one from many standpoints, that merchants, particularly in country towns, should have the name of their Province on their letterheads, statements, envelopes, etc., as well as the name of the town. In the new towns particularly very few of the business men seem to have followed this course. It would obviate a good deal of confusion and be of benefit in many ways.

Review of the Year's Work at the Steel Plant — Presentations to Men in the Trade.

HALIFAX.

January 4.—Trade is rather quiet at the present time, but the manufacturers and wholesalers are sanguine of a steady revival in business conditions during the coming spring and there is a hopeful feeling prevailing, even in some of the manufacturing centres where trade at the present is not quite up to the average. With a crop year above the ordinary, the lumber markets inclined to be improving, and with other healthy indications, confidence is felt in the future of the Province and the development of its varied resources.

General Manager Jones of the Dominion Iron and Steel Company has great confidence in the future of the plant. During the year the output was the greatest in the history of the company and the profits about the same as in 1907. In the busy season the company employs about 3,000 men, and Mr. Jones says that the plant is equal to any that he saw in the United States or England. The production for the past year was as follows:—

	Tons.
Ore mined	556,000
Pig iron made	262,000
Steel made	277,000
Rails made	153,500
Wire rods made	12,000
Other steel products	55,000
Sulphate ammonia	3,000
Tar (gallons)	4,500,000

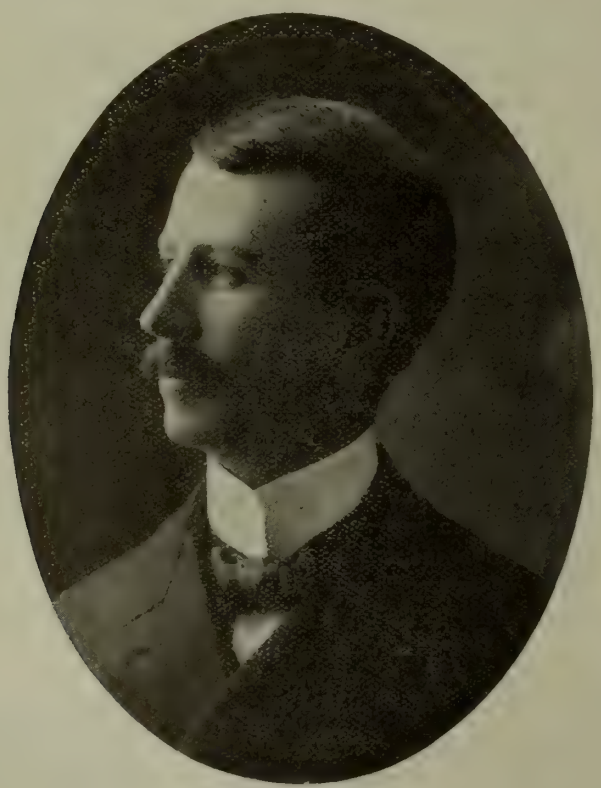
The company's gross earnings for 1908 were, $2,613,815.66.

John E. Myers, plumber, Gottingen Street, was presented on New Year's eve with a silver cruet stand, by his employees, accompanied with an address, which was signed by all of the employees of the firm. Mr. Myers acknowledged the gift in suitable terms.

On New Year's eve Frank D. Hillis, manager of Hillis & Sons, Ltd., iron foundry, was waited upon by the employees and presented with an address, accompanied by two handsome pieces of den furniture.

At North Sydney the employees of the molding department of the A. C. Thompson Co.'s foundry waited on their popular foreman, Arthur W. Schwartz, and presented him with a very handsome and costly gentleman's dressing case, accompanied by an address.

One of the richest gold strikes ever made in Nova Scotia is reported from Country Harbor, Guysboro County, where a number of local capitalists are interested in developing a number of areas. A sample section of quartz on exhibition in Sydney reveals the richness of the strike. Mr. Huntington, an expert, says that it is the finest specimen he has ever seen in the Province.



C. M. STRANGE, MONTREAL.

Province of Quebec

Conference of Travelers at Montreal—Store Damaged by Fire—New Salesman Appointed.

MONTREAL.

Jan. 6.—Napoleon Paradis has joined the selling forces of the Canada Paint Company and will be attached to the main works in Montreal, traveling in the Province of Quebec. He has been on the road for a number of years representing hardware firms and is a son of Francois Xavier Paradis, general merchant, St. Denis.

The fifth annual convention of the salesmen of Lewis Bros., Montreal, was held at Montreal, on December 28 to 31. The first day was spent by the salesmen in visiting the different flats and going into special matters with the heads of the different departments. Monday evening they dined at the Engineers' Club, where they were guests through the courtesy of C. M. Strange, director and sales manager, afterwards going to the theatre.

Tuesday, Wednesday and Thursday were spent listening to A. A. Bittues, managing director of the Gillette Safety Razor Co., of Canada. A. McAvity, manager of the Canadian Buffalo Forge Co.; Mr. Ling, of the Lincoln Waterproof Cloth Co., Chicago; Mr. Grobb of the McKinnon Dash & Metal Co., St. Catharines; and Mr. Fairbanks, of the Anrold Safety Razor Co. The White Frost Refrigerator, Hurd's Axes, Dana Meet Choppers and Oil Stoves were fully demonstrated by the heads of the different departments of the house. E. J. Johnston, accompanied by G. R. Burton, of the Dominion Cartridge Co., gave a most interesting lecture showing how cartridges and loaded shells were manufactured.

On Tuesday night the annual convention was held at the company's offices. J. G. Lewis, vice-president, gave an address. All the salesmen had an opportunity of expressing their views as to what had been done in the past and what would be done in the future, and suggestions were received. C. F. Smallpiece, J. T. Smith and C. M. Strange each made a few remarks in conclusion, thanking all the salesman for the as-

sistance they had given the different departments.

On Wednesday evening the annual banquet was held at the Engineers' Club. C. M. Strange, director and sales manager occupied the chair. Thirty-four in all sat down and after the King's health was proposed, the chairman read a cable from the president, F. Orr Lewis, regretting his inability to be present and sending his best wishes. A telegram was also read from N. A. Wylie, general sales manager of the Kemp Mfg. Co., Toronto, and a letter from J. R. McMillan, two of Lewis Bros. old salesmen. Also a letter of good advice from John Hall, veteran salesman of the Simmons Hardware Co., St. Louis.

The following were present at the convention: J. R. Anderson, J. A. Bureau, H. B. Carbray, J. T. Craig, H. H. Clark, H. B. Dale, J. A. Demers, C. L. Devitt, Chas. Doddridge, G. C. Dufresne, G. W. Dunn, G. N. Gray, A. D. LeBlanc, L. J. LeClair, A. R. McGregor, H. R. Picketts, Alf. Rochette, B. Saunders, H. H. Valliere, J. C. Watson, G. C. Young G. E. Chaffee, E. B. Ryan, C. J. Walker, E. R. Spragg, O. D. Hixon, E. N. Cote, H. V. Armstrong, E. Bourret, D. Deschamps, P. Dansereau and James G. Lewis, J. Thurston Smith, C. M. Strange, C. S. Smallpiece.

The assets of Nap Avon, hardware dealer, Emardville, Que., have been sold.

The stock of F. O. Ranger, hardware merchant, Montreal, was damaged by fire and water.—F. J. A.

Ontario Trade News

Old Pair of Skates at Kingston—Old Foundryman Dies at Hamilton—Sanderson-Harold Co. to Rebuild Their Factory at Paris.

KINGSTON.

January 5.—All the hardware men reported a good holiday trade, but now, since the weather has been quite mild, the business is only fair. Some of the dealers report a good trade from outside places, that is for instalation of heating systems, and this has kept them very busy. All the merchants do quite a large amount of work throughout this district, and without it they would indeed go very short. "It is the outside work that helps us a great deal," remarked one of the merchants. The great demand at present is for household goods. One dealer remarked that his cash business last month was greater than any month previous.

McKelvey & Bush, Brock Street, have just completed the work of putting in the heating system for the Farmers Bank and Bank of Montreal, at Trenton, and the Bank of Montreal at Stirling. The firm has twelve contracts for plumbing and heating at Picton. This firm always has a rush of outside work and has a wide reputation for good work. Last season the firm fulfilled contracts in Quebec.

J. Stanley Richmond, electrician, Toronto, is at Wellington, installing an electric light system for W. P. Niles.

The by-law asking for a bonus of $10,000, to be given Wormwith & Co., to re-establish the furniture factory recently destroyed by fire, was defeated by 49 votes. It was necessary to have a two-third vote. The by-law met with the favor of the ratepayers generally and much regret is expressed at the by-law's defeat. A by-law for extensive road improvement was also defeated.

The Kingston knights of the grip held their annual banquet at the British-American Hotel, and, as usual, it was a very jolly affair. There were speeches and songs and during the evening High Chief Abernethy was presented with a silver tray, and Secretary Hendry, a fine chair.

Thomas Driver, collector of inland revenue, has just appeared on the ice with the most unique pair of skates in Kingston. The skates were made for him in 1862, and he first used them on the Citizens' Rink in the harbor, Jan. 1, 1863, just 46 years ago. They are a beautiful pair of steels, of the long speedy type, and are in as fine condition as when first made.

Architect Power, who is looking after the new city hall dome now under construction, has planned the belfry so that four bells can be worked in connection with the clock, but three will suffice. He will secure a large bell of 2,100 pounds weight. The old one was 1,200 pounds, but owing to the increased size of the city a larger and deeper toned bell is required.—E.G.B.

OTTAWA.

January 5.—Yesterday was Ottawa's municipal election day, when the ratepayers besides electing aldermen, controllers and school trustees, were also called upon to pass upon three by-laws and a plebiscite for a publicity bureau. The by-laws were one to raise $16,000 to pave By-Ward Market, one for $60,000 to enlarge and remodel the City Hall, and the third for $60,000 for public playgrounds. The first was the only one to carry, so that for the present Ottawa will have to do with its City Hall as it is, the children will be deprived of a playground, which is so essential to the health of the young ones, in a rapidly growing city where yard space is at a premium. As for the establishment of a publicity bureau, it will also require further discussion, but in this the city would have had a means of advertising its commercial attractiveness, as well as its residential and tourist features. The merchants would benefit eventually by such a bureau, and the hardwaremen should unite in an endeavor to promote interest in such a scheme. Here's a chance for the Retail Hardware Association to do some effective work. The chief cause of defeat of the by-laws was the number presented at the one time, and that they were not all fully understood.

The City Hall staff are busy preparing the year's figures and it would seem that the number of building permits issued during 1908 will be about the same as that in 1907. During the month of December property transfers to the number of one hundred and twenty-six were recorded.

The contract for supplying the builders' hardware for the Y.M.C.A. building has been secured by the Gurney-Tilden Co., of Hamilton, through their local representative, Wm. Graham. It is gratifying that an Ottawa man and a Canadian manufacturer secured the contract. The building is to be both master-keyed and grandmaster-keyed, there being one key controlling the whole building, and no two keys being alike.

The death occurred on January 1 of Michael Johnston. He conducted a tinsmith and plumbing business for nearly half a century.

J. A. Acton has opened a hardware store on the corner of Bank Street and Third Avenue. He formerly conducted business in Eganville, but has now made Ottawa his headquarters. The Eganville store will, however, be retained as a branch store, and every effort made to promote trade. Bank Street numbers many hardware stores among its places of business.

Your correspondent spent New Year's in Brockville and gathered from conversations there that great things are expected of the National Mfg. Co., when they get into full swing at Brockville. This firm purchased the foundry run by Cassett Brothers, and intend enlarging the premises to meet their demands.

A Brockville man wants the address of firms making aluminum goods. He claims to have a nickel solution which can be applied successfully to aluminum.—G. E. M. H.

TORONTO.

January 6.—J. W. McMillan, formerly with Rice Lewis & Son, Toronto, and now a member of the firm of McMillan Bros., Guelph, has accepted a position on the office staff of Rice Lewis & Son. He will retain his interest in the Guelph business.

C. D. Waldon, of the Pease, Waldon Co., Winnipeg, has been spending a fortnight in Toronto, conferring with the staff of the Pease Foundry Co. President Sheridan, of the Pease Foundry Co. is on a trip to the West.

On Tuesday evening, December 30, the salesmen and department managers of the Kemp Manufacturing Co. and Macdonald Mfg. Co., to the number of 32, were the guests of a staff dinner. A. E. Kemp was chairman for the evening, and W. A. Kemp assisted as vice-chairman. A pleasing feature of the occasion was the fact that five of those present had been in the employ of the company for twenty years, while six others had been with them for over ten years. Regret was expressed at the unavoidable absence of W. Crawford and Mr. Wildman, the Western managers; G. A. Scott, British Columbia representative; G. A. Binns, Maritime representative, and Mr. Hayes, the Montreal manager.

The selling staff of the Pease Foundry Co. were the guests of the officers of the company at a dinner at McConkey's restaurant, Toronto, on Thursday evening, December 31. The day was spent in a staff conference during which a discussion took place on the new features

to be added to the Pease line of heating goods as well as on the plans for a further extension of the company's business.

Fred. G. McBrien, who was defeated for alderman in Ward 6, Toronto, by 12 votes, will ask for a recount.—W. W.

HAMILTON.

January 5.—One of the oldest foundrymen in Canada died on New Year's night in the person of William Burrow, of Burrow, Stewart & Milne, this city. To many of the trade throughout Canada the news of his death will be sad news indeed, for to those who knew him Mr. Burrow was ever popular and worthy of esteem. It was owing largely to his dogged persistance and business foresight that the concern in which he was involved received its origin and progressed as it did. The late Mr. Burrow was born in Devonshire, England, in 1838, and came to this city when a young man. He was not here long when with others he started the manufacture of stoves. He was president of the company until a year ago when he resigned and John Milne succeeded him. The deceased was a member of Barton Lodge, A.F. & A.M., and of the Commercial Travelers' Association.

W. A. Wood, of Wood-Vallance, has been appointed a director of the Bank of Hamilton in succession to the late John Proctor.

The annual meeting of the Canadian Westinghouse salesmen was held at the head offices here last week. About 30 representatives scattered from Halifax to Vancouver were present for the consideration of matters pertaining to the welfare of the company.

As the result of the municipal elections yesterday two hardware and stove dealers were returned to the city council as aldermen for 1909. They were Hugh C. Sweeney and Alfred J. Wright. Willoughby Ellis, of Chadwick Bros., brass manufacturers, was also elected. —D.L.

GUELPH.

January 5.—Guelph is getting to be quite a centre for hardware manufacturers. The Louden Machinery Company are moving into their fine new premises and their old plant, the drill sheds, which they have had use of at very low rental, is soon to be occupied by the Louden Manufacturing Company, manufacturers of all kinds of potato machinery. In addition to this the Raymond Manufacturing Company, who turn out the well-known Raymond sewing machine, have succeeded in completing arrangements with the Foley, Williams Company, of Chicago, to manufacture all their Gooderich machines for the Canadian, Newfoundland, Australian and New Zealand trade. This addition to the already large business of the Raymond Company means a good deal to them. They have been running short time up till lately, but now have their wood shop working ten hours, and both iron shops and the foundry working nine hours, and it is expected that it will soon be full time all through all their departments.

All the retail hardware merchants of this city were wideawake as usual and ready to take advantage of the good holiday trade. The Bond Hardware Company distinguished themselves with one of the finest displays of silverware and cutlery that ever adorned a store window. The background of the window was of dark velvet, which sets off the bright wares beautifully. McMillan Bros. had their windows filled with many excellent suggestions for holiday shoppers in the way of fashionable brass tableware. The display was very attractive and quite unique. It attracted a great deal of attention. Richardson's, the upper Wyndham Street hardware firm, were the first to fill their windows with sporting goods. Now that the skating season is well opened they all have devoted more or less of their display space to skates, hockey sticks and pucks.

Owing to the fact that the sporting element of the Royal City have gone hockey crazy, with a junior and intermediate as well as a professional team in the field, and a lively church league, there is a great demand here for sporting goods needed in playing hockey, the king of winter sports.

McMillan Brothers have taken advantage of this hockey craze to advertise their good line of sporting goods by attractive little schedule cards which they have had printed for the church league hockey enthusiasts and are distributing them free gratis.

H. Occomore, dealer in tinware and stoves, was away for a few days this week to London, Toronto and other places, on a business trip.

The value of the knowledge of a foreign language to a man in business was demonstrated here the other day when a young man in the employ of H. Occomore went to the home of a customer to put up a couple of stoves. The lady of the house spoke with quite a decided accent and the stove man who could speak German quite fluently ventured the query, "Sprechen Sie Deutsch." The young woman replied in the affirmative and they chatted pleasantly in German as they worked. The husband came home but he could not speak in his wife's mother tongue, and was, consequently, left quite out in the cold while the stove man went on pleasantly chatting with his better half.—H. S. N.

GALT.

January 6.—Business affairs in Galt are exceptionally brisk at present, the after-holiday reaction having been passed. Merchants are again getting busy and the prospects for the present year are exceptionally bright.

The Christmas trade was the best for the last three years, at least in Galt. Notwithstanding some reports to the contrary, circulated by interested persons, a personal interview with the majority of Galt merchants indicates conclusively that the trade of 1908 was far in excess of that of the previous year.

The demand for hardware supplies is not as brisk as usual. This, however, is to be expected, as building operations for the season have practically ceased. The cold weather has proved a boon to the plumbers, who are kept busy attending to defective plumbing which had been neglected in the summer.

Your correspondent interviewed the several manufacturers in town and from the opinions expressed it would appear that the outlook for 1909 is exceptionally bright. Practically all the shops are working ten hours and in many cases overtime is the general thing.

At Goldie & McCulloch's the immense factories were found to be in full swing, with many orders ahead. McGregor's were busy and will shortly require a night shift.

Cowan and Company were just as busy as ever before. A large number of orders were on hand waiting to be filled and a full staff is employed, with additional men being taken on daily. The management told your correspondent that never before were the prospects brighter than for the year 1909.

The Canadian Brass Company, with the exception of a short time when the factory was entirely closed, has never even been on short time, and to-day is busier than ever.

The Galt Brass Company is also exceptionally busy, additional mechanics being taken on.

Shurley & Dietrich's saw factory was filled with orders and a large staff was working ten hours a day. This company will be one of Galt's busiest firms during the year.

Sheldon's bed factory was never on short time, and the prospects at present are better than ever before in the history of the firm.

The Galt Art Metal Co. held their annual convention on Dec. 30. The salesmen and branch managers foregathered with the heads of executive and manufacturing departments and a very pleasant and profitable day was spent. The forenoon was devoted to an inspection of the works and an opportunity afforded the staffs to become acquainted, as there were some new faces since the last annual convention. Geo. W. Stone and Chas. W. Barker, both of whom formerly represented the International Harvester Co., have recently joined the sales staff of this firm and are making good in the sale of the "Galt Kind." In the afternoon a session was held at the head office, in which many topics of interest were fully and freely discussed. The salesmen, who are in the best position to "feel the pulse of the country," seemed to be unanimously of the opinion that the outlook for the coming year was very bright. They felt that they had a great deal to be proud of in the splendid showing they had made in the past season in view of what was considered to be dull times, but at the same time the increased activity which was evidenced in all branches of business, more particularly in the building trades, would make the coming season a record one. In the evening the company tendered a banquet to the staffs at the Hotel Iroquois, after which Chairman F. H. Hayhurst, the managing director, proposed a toast list of considerable length ending with a free-for-all which carried the discussion well on into the "wee small hours." All felt that a very pleasant and profitable day had been spent and the gathering broke up with hearty good wishes for the coming New Year. Among those present

were:—F. H. Hayhurst, managing director; A. D. Dame, sales manager; R. W. MacDonnell and D. G. Spiers, accountants; L. W. Koser, designer and estimator; N. S. Goudy, order and advertising departments; Ira J. Ribble, R. A. Grant, O. L. Christman, Geo. W. Stone and C. W. Barker, salesmen; L. B. Beath, Toronto branch manager; F. VonHatton, superintendent; C. W. Killer, foreman of cornice department, and A. Flanagan, head shipper.—B.E.C.

CHATHAM.

January 5.—For the first time in many years a hardware merchant occupies the position of chief magistrate of Chatham, the municipal elections yesterday landing Ald. W. H. Westman in the Mayor's chair with the tidy majority of 390. Ald. Westman's opponent, Ald. John Edmondson, had to his credit a longer term of civic service, a qualification rarely overlooked by Chatham electors; but the hardwareman put up a clean but scientific campaign and won hands down. The contest was a very friendly one and neither vanquished nor victor had anything but the kindest words to say of his opponent. "The people have chosen a good man for the chair and I feel certain that Chatham will have a first rate Mayor for 1909," is the way Mr. Edmondson puts it.

In consequence of municipal elections and bad roads, the past week has been a rather quiet one in the hardware business, though nevertheless business is holding up pretty well for this time of the year. Thanks to a return of soft weather skates and hockey sticks are little in demand.

A. D. Westman, of Westman Bros., was pleasantly surprised on Monday evening after the Park Street Methodist Sunday School concert, when his Bible class presented him with a pair of solid gold cuff links as a token of their regard.

The Chatham Malleable Iron and Steel Company report a most successful season for their output of handsleighs and cutters, and are now commencing spring work. They expect to construct a new factory in the course of a few months.

The Defiance Iron Works recently added 15 men to their staff, an indication that business is picking up to a certain extent.—W.E.P.

LONDON.

January 5.—Retail hardware men report a good holiday trade, the demand for skates, sleds, etc., being brisk. The quiet which is usual after the Christmas holiday season is now in evidence.

Mayor Stevely and Ald. Parsons are the only two metal men who were successful in yesterday's municipal elections. Ald. Armstrong and the swimming baths and playgrounds scheme which he fathered were both snowed under. Ex-Ald. Scarlett, vice-president of Wostman & Wood, came within a few votes of being elected. The waterworks by-law was defeated, while the vote on Sunday street cars was favorable to the innovation, the majority being about 400.

The Grand Trunk car shops opened up again yesterday morning with 459 men on the pay-roll. They will be employed eight hours a day, and the prospects for a bright future are excellent. Superintendent Trehaven states there is now plenty of work and that the men will be kept on steadily, and by spring it is expected everything will be in full swing again. Other local concerns report signs of a real boom and a gradual pickup in financial circles is noticeable.

No less than 860 more freight cars were handled in the local yards of the G.T.R. last month than in December, 1907, the total for the former being 21,126.—F.T.Y.

BRANTFORD.

January 4.—J. P. Pero, for many years the valued superintendent of the Pratt and Letchworth Co., of this city, left on Wednesday last for Indian Orchard, Mass., where he will take a short vacation previous to the taking up of the responsible position of general manager of the Missouri Malleable Iron Co., East St. Louis, one of the biggest concerns in the U.S. John Pew, Jr., has also been appointed superintendent of another large works in the United States.

Trade has now resumed its normal aspect, but the local hardware dealers are well pleased with the amount done this fall. "The Christmas trade," said one to your correspondent, "has been much above our expectations, but the usual winter trade has not been good. The weather has been very changeable, and there has not been a week's continuous good sleighing yet this winter. This has a far reaching effect on winter goods."

The Sanderson Hardware Company, Paris, will rebuild their burned-out plant on the present site. The Paris town council have granted the use of the market building to the firm, who will manufacture there until such time as their new factory is erected. It will be of double the capacity of the former plant and will employ a much larger staff.

Mostyn Cutcliffe, of Turnbull & Cutcliffe, hardware merchants, was elected school trustee. W. R. Turnbull, the senior member of the firm, was defeated for an aldermanic seat.

Arthur McKim was the winner of the guessing competition of the Torrens Hardware Co., Tillsonburg, winning the carpet sweeper offered to the one who guessed nearest to the number of seeds on a sunflower head. There were 2,166 seeds.

S. H. Knox & Co., 5, 10 and 15c store, have removed to more commodious quarters on Colborne Street. In speaking to a gas fixture firm this week your correspondent learned that owing to the advent of this store a number of firms here are doing away with the sale of cheap gas mantels, etc., confining themselves to the higher class of goods and guaranteeing their use.

William McGrath, of the McKinnon Metal and Dash Company, St. Kitts, has accepted a position with the Packard Electric Co.

The Portland Cement Co.'s plant at Port Colborne has shut down for ten days for repairs.

Harry Wilford, dealer in stoves, St. Paul Street, St. Catharines, has assigned. Bailiff Boyle closed the business, acting in behalf of the Grundy Mfg. Co., Guelph.

The Goold Shapley and Muir Co., and the Verity Plow Co. started on full time to-day, and the Cockshutt Plow Co. will run each evening until nine o'clock. Sure signs of trade improvements.—A.W.

Will Torrance, of Paris, has accepted a position as general manager of the Battle Creek Hardware Store, Michigan.

The local hardware dealers are well satisfied with the Christmas season. The last Saturday before Christmas was well up to the marks of former years, but the intervening days were much above the average. As usual, cutlery, cut glass and sporting requisites were heavy sellers, but household conveniences, such as carpet sweepers, coffee percolators, and meat cutters were in good demand. Safety razors proved to be very popular as gifts for men. There were a number of fine Christmas windows, including Turnbull & Cutcliffe, and John Bishop & Son.

The Telephone Stove Co., who also handle toys and sleighs, report that there was a good sale in the latter.

Watt & Squires had a decided innovation in their south window last week. Six live turkeys were placed there last week, a few days before Christmas, the window being converted into a barnyard. Coupons were given out to each customer and on Thursday evening the duplicates were drawn from a box, and the turkeys given to those holding the lucky number. The firm report that the act was a good one, and the trade drawn by it more than paid for the cost.

A. H. Elliott, who was prominently connected with the Westrumite Paving Co. and the Brantford Roofing Co., died suddenly on Thursday last.

Ham & Nott Co., manufacturers of bed springs and hardware, presented all of their employes who have been with the firm for ten years, with a gold watch or other valuable article as a Christmas gift. The Brantford Roofing Co. and the Cockshutt Plow Co. presented each of their employes with a fine turkey.

The Hebrews of Brantford intend erecting a new synagogue here on an elaborate scale.

Coulter & Co. have struck a good flow of gas on the W. H. Gainer farm, Quaker Road, Welland.

F. J. Rank, whose flour mill was destroyed at Norwich, will rebuild.

Should the by-law granting $100,000 for a new Collegiate Institute be passed we hope for a good share of the hardware in that. In another line there will be a good deal to be done. The street railway are bound to expend $3,000,000 in two years, and a great deal of that has to be done in 1909—the double-tracking of their tracks in the city's centre.

A building permit has been granted to R. G. Yeates for a brick residence on Port Street, for $1,200.—A. W.

HANOVER.

January 5.—Wapper & Helwry, Hanover, have moved into their fine new premises. The building is a very fine structure, with a white front, which gives it a striking appearance. The store,

which is finished in the most modern style, is 34 by 92 feet, giving ample room for convenient display of goods. The ceilings are of very artistic design, and the shelving is most conveniently arranged and handsomely finished.

BARRIE.

January 5.—The store conducted by the late J. J. Coffey, which is shown in the accompanying illustration, is being carried on for the present by John Coffey, who joined his father in the business a few months ago. Both father and son are shown in the picture.

Hardware Store at Barrie, Conducted by the Late J. J. Coffey.

J. R. Hambly, president of the Ontario Retail Hardware and Stove Dealers' Association, returned on Monday from a fortnight's holiday trip to Buffalo and New York.—W. W.

British Columbia

Prediction Made That 1909 Will Be the Greatest Year in the History of the Trade in British Columbia—The Rebuilding of Fernie.

VANCOUVER.

January 2.—It is doubtful if the opening of any other year found hardware merchants more hopeful. Everything points for a good trade, and those who have been talked to are sanguine that 1909 will eclipse all previous years in the way of business. Even during the past while back and the holiday season, the demand has been constant and good, and not one dealer declares trade below the average. This is pretty good considering the conditions of the past year, and the fact that there is so much activity in the trade at this season of the year, which is accounted the quietest, speaks well for the outlook. Building is still going on in large proportions, mines are being worked and it is expected that very shortly there will be renewed life in the lumbering industry. American owners of timber in British Columbia are making a strong effort to have lumber placed on the free list in the United States, and if this takes place large quantities will be shipped from here. The Americans practically control the industry in this Province, and as all have personal connections in their own country, with the duty off, an immediate and large business would follow.

The plumbing by-law which was drafted several months ago and which has not yet been finally passed by the committee of the City Council, having the matter in hand, will have another amendment added to it. This will allow what is known as the Durham system of plumbing. This type of work is specially designed for high buildings, and uses galvanized iron piping instead of the cast iron, as demanded by the present regulations. By the use of galvanized iron, the pipes can be threaded and joined in this manner, rather than by caulking as is necessary with cast iron pipe, a certain amount of elasticity being also given the work. The new system has been permitted in special instances in Victoria, the Empress and King Edward Hotels being thus equipped.

R. D. Kenny, who for nine years has been manager of the hardware department of W. R. Megaw's store in Vernon, B.C., has come to Vancouver to reside. Before leaving he was presented by the general manager and staff of the store with a gold watch, chain and locket, engraved with his monogram.

The purchase by the Great Northern Pacific of extensive foreshore property on False Creek will go a long way to strengthening values of real estate and bringing business to the city. These companies have bought about a mile of property bordering on False Creek, which will be used for joint terminals. That they are planning thus, will be an incentive to the establishment of industries in Vancouver, for with a direct line to the Kootenay, a competitive service will be given the business men to the lower interior of the Province, and with three lines having terminals in Vancouver, alternative routes across the continent will be offered. Large quantities of heavy material are brought in the round-the-world liners to this port, and with additional transportation facilities by which shipments East can be made, considerably more business should come through this port.

Building permits for the past week totalled $67,510. Of this amount, $10,000 was for alterations in a large building, and the rest for dwellings.

NEW WESTMINSTER.

January 2.—Seaton Bros., of Vancouver, have closed a deal for the Crane ways in this city and for the Emmerson dry dock and will instal an up-to-date boat building plant, to turn out large boats as well as yachts and launches. Arthur Seaton, who has had charge of the plant in Vancouver for some years, learned his business with the Union Iron Works, San Francisco, while one of the other brothers is a draughtsman of ships. Possession of the new premises was taken yesterday.

FERNIE.

January 2.—Andy Hamilton's tin shop had a narrow escape from fire the other day. A can of gasoline exploded, it being ignited while a furnace was being filled. H. C. Cornett, who was handling the gasoline, was severely burned about the face and arms, and came nearly losing his eyesight.

The new Fernie, which is now taking the place of the city destroyed by fire last June, will be better all the way through. All told, there are now standing about 700 new buildings of all classes and descriptions, and the most satisfactory thing is that all are much better and larger than the old buildings. Brick and concrete has entered largely into construction, particularly the latter.

SEVERE WEATHER AN ADVANTAGE.

The present extremely severe weather will materially help the lumbering interests. They have had in most sections very little frost, and the lakes and rivers have not been frozen hard enough to permit teaming. Lumbermen were beginning to worry, but the present drop in the temperature has given them encouragement.

W. W. Rutan, M.P., who has been in the hardware business in Melfort, Sask., for the past seven years, has sold to H. A. McEwen, of Rosthern, and H. A. Dawson, of Prince Albert. Mr. Rutan will continue to reside in Melfort.

Novelties for the Hardwareman

PALMER'S 1909 HAMMOCKS.

The accompanying illustrations show new hammocks manufactured by the I. E. Palmer Company, Middletown, Conn. The swinging couch hammock shown in Fig. 1 is suspended from the company's special couch support, which can be supplied with an awning. In Fig. 2 the same kind of a hammock is hung from a verandah ceiling by ceiling plates specially constructed to afford a noiseless antifriction movement. The hammock may also be suspended from trees. It comprises a bed frame, 28 x 72 in. in size, strongly made from well seasoned rock maple. To the frame is attached a helical spring and wire mattress, or bed support, of modern construction, calculated to supply the maximum amount of ease and durability. Upon this is placed a thick cotton quilt wadding, giving, it is shown, in connection with the spring an easy bed, over which is stretched the fabric of the hammock body. The bed frame is easily removed and can be reversed if it springs or warps. The hammock is supplied with valances, concealed spreaders and adjustable hitch end rings, and is furnished in two styles of weave in colors. Wind shields for attachment to one side of the hammock are supplied where requested, as are also adjustable back rests, converting the hammock into a swinging settee. Pockets at each end for the reception of magazines and papers are also supplied only when requested. One of the company's regular line of hammocks is illustrated in Fig. 3. It is explained that the naive treatment of this "Model Town" design is on the order of Swedish hand-woven work of 100 years ago, which is now being revived by order of the Queen of Sweden. This hammock is made in two colors.

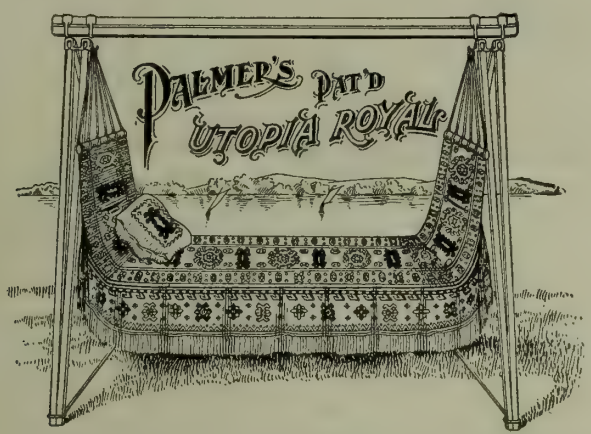


Fig. 1—Utopia Couch Hammock on Special Support.

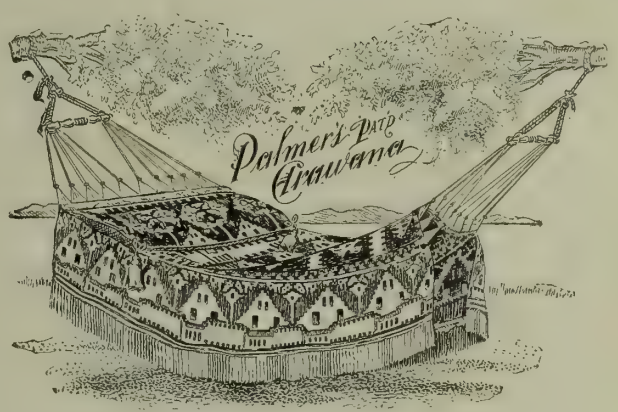

Fig. 3—Palmer Hammock, Model Town Design.

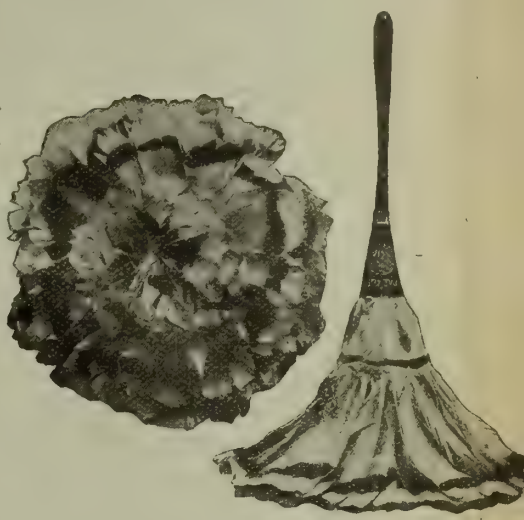
Fig. 2—Utopia Couch Hammock on Verandah.

FEATHER DUSTERS.

The manufacture of turkey feather dusters has been begun by the H. W. Nelson & Co., 92 Adelaide Street West, Toronto. This firm is the first in Canada to turn out this class of dusters and anticipates a large sale, as they will be put on the market at precisely the same figure at which the American makes have been selling, less the discount, which will mean a considerable saving to the purchaser. The firm has handled turkey dusters of American firms for several years and made a special study of them. A large stock of the finest turkey feathers has been contracted for and an up-to-date plant equipped with the latest machinery has been installed. It is expected that the first consignment will be placed with the trade about the first of next month. Turkey dusters are claimed to be superior to wool dusters or brushes in that they are light, and can be used on furniture with less damage and with less danger of knocking things off.



Turkey Feather Dusters.

COMPASS PLATES.

A very unique idea to satisfy that predominant American characteristic—curiosity—has just been placed upon the market by the Brass Shop, Pittsburg, Pa. It is a highly polished, flat, brass or bronze fixed compass plate which permanently indicates the north, south, east and west. These plates are cast from yellow brass or bronze, carefully finished and polished, the edges being beveled so the plate lies perfectly flat. The direction marks are deeply cut and the plate is ornamental and unique. They are made in two sizes; floor and window sill.

Store Cleaning Time

The Christmas rush is over and hardware merchants will find the next month the most opportune time to make those changes in their stores which they have probably been contemplating for some time.

It will pay you to get your store in good shape before the Spring rush commences.

If you want a new show case or counter and wish to dispose of your old one, first write out a brief description of it, insert in HARDWARE AND METAL and you will no doubt find some dealer between Halifax and Vancouver who is looking for a chance to buy at a reasonable figure the very articles you wish to sell.

Do you want to buy a new desk ? A "want ad" will find some dealer who is re-arranging his store and is anxious to dispose of such a desk at a bargain price.

Have you a set of tinner's tools for sale ?

Do you wish to sell some old shelf boxes in order that you may replace them with new ones ?

Have you a screw cabinet, a wire cloth rack, a rolling step-ladder and all those fixtures which make your store look neat and enable you to give your customers quick service ?

There are a hundred little services our "want ad" department can perform for you.

Rates (payable in advance)

2c. per word for 1st insertion.
1c. per word for subsequent insertion.
5c. additional each insertion when box number is required.

CONDENSED OR "WANT" ADVERTISEMENTS.

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

AGENT WANTED by cutlery manufacturer in Germany. Goods are already known in Canada, having been sold for 30 years. Sole Canadian agent to be appointed. Good connections necessary. Applications to Box 2915, HARDWARE AND METAL, Montreal. (50f)

AGENTS WANTED with good connection with hardware trade to handle a specialty which has had a good sale with hardware men and booksellers and stationers in the United States. The line has already been introduced to the bookseller trade in Canada, but separate agents are wanted for the hardware trade in Montreal, Toronto and Winnipeg. Apply, stating agencies you now have, to Box 779, HARDWARE AND METAL, Toronto. (6f)

CHAINS, ANCHORS, &c.—A Lancashire firm manufacturing chains, anchors, windlasses winches, capstans, steering gears, tanks, iron buoys, pontoons, lighters, dock accessories, &c., desires to communicate with Canadian firms, with a view to opening up business connections. (1538f,45)

WANTED in every town and village, a representative to take charge of the circulation of our various publications:—Hardware and Metal, Canadian Grocer, Financial Post, Plumber and Steamfitter, Dry Goods Review, Printer and Publisher, Bookseller and Stationer, Canadian Machinery, and Busy Man's Magazine. Good financial standing and business connection a strong recommendation. Just the position for a retired business man for his spare time. The MacLean Publishing Company, Limited, Toronto.

AGENCIES WANTED

Manufacturers of hardware lines both at home and abroad watch our paper each week. If you want to secure the exclusive agency for any line for the whole Dominion, for a Province or for your own city or town you will find a Want Ad. will put you in touch with the right firm.

RETAIL HARDWAREMAN, with wide experience, wishes to establish himself as manufacturers' agent in Toronto, and would like to correspond with manufacturers who are interested. Best of references can be given. Address Box 101, HARDWARE AND METAL, Toronto. (tf)

BUSINESSES WANTED.

The business of your next door neighbor may be for sale, and you would not know anything about it. The only way to get replies from the trade everywhere, is to advertise in a paper which reaches the trade everywhere in Canada.

TO BUY hardware business, stock $3,000 to $6,000. Give full particulars and terms on which payment may be made. Box 776, HARDWARE AND METAL, Toronto. (3)

BUSINESSES FOR SALE.

Somewhere in Canada is a man who is looking for just such a proposition as you have to offer. Our "For Sale" department brings together buyer and seller, and enables them to do business although they may be thousands of miles apart.

HARDWARE and tinsmith business for sale in one of the finest farming sections of western Ontario. The very best of reasons for selling. Address Box 775, HARDWARE AND METAL, Toronto. (3)

ARTICLES FOR SALE.

Don't keep any fixtures or tools around your store for which you have no further use. They are worth more to-day than they will a year hence. Don't keep money tied up which you could use to secure discounts from your wholesaler.

RIVETS AND BURRS—Iron rivets, 60 per cent. copper; No. 7, 29c; 8, 29½c; 9, 30½c; 10, 31¾c; 12, 34c. Copper burrs, No. 7, 39c; 8, 40c; 10, 43c; 12, 46c. Copper rivets and burrs: No. 8, 30½c; 9, 33c per lb.

COIL CHAIN—¼, $7; 3-16, $5.50; ⅜, $4.90; 7-16, $4.70; ½, $4.40; ⅝, $4.20; ¾, $4.05.

SHOVELS—40 and 5 p.c.

HARVEST TOOLS—50, 10 and 5 p.c.

AXE HANDLES—Turned, s.g. hickory, $3.15; No. 1, $1.90; 2, $1.60; octagon, extra, $2.30; 1, $1.60.

AXES—Bench, 40 and 5; broad, 5½ to 7½; $21 per dozen; 7¾ to 8¾, $23 per dozen; Royal Oak, per dozen, $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.50; Copper King, $8.25; Columbian, $9.50; handled axes: North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $10.50 per dozen.

AUGUR BITS—"Irwin" bits, 47½; other lines, 75 p.c.

BLOCKS—Steel, 35; wood, 60 p.c.

HINGES—Light T and strap, 65 p.c.

HOOKS — Brush, heavy, per doz., $8.75; grass, $1.70.

FILES—American, 75; Black Diamond, 60; Nicholson's, 65 p.c.

STOVE PIPES—6-inch, $9.25; 7-inch, $10.

BUILDERS' HARDWARE—50 p.c.

TINWARE, &c—Pressed, retinned, 70; plain, 75 and 2½; pieced, 25; japanned ware, 35; Famous enamelled ware, 50; Imperial, 50 and 10, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; White, 70 and 5; Diamond, 50; Granite, 60 p.c.

GALVANIZED WARE—Pails, 37½ p.c. Other galvanized lines, 33 1-3 p.c.

SOLDER—21c per lb.

LANTERNS—Cold blast, per doz., $7; coppered, $9; dash, $9.

WRINGERS—Royal Canadian, $33; B.B., $40.75 per doz. Churns, 45 and 5.

ROPE—Sisal, 10¼c; pure manila, 13¼c; British manila, 11¼c. Lath yarn, 9¼c.

BUILDING PAPER — Sunrise, plain, 50c; Surprise, plain, 50c; Lion, plain, 55c; Anchor, plain, 60c; Cyclone, plain, 60c; Victoria, plain, 70c; Triumph, plain, 67½c; Buffalo, plain, 67½c; Jubilee, plain, 70c; Anchor, Joliette and Buffalo, tarred, 62½c; Victoria and Jubilee, tarred, 86c; Triumph and Joliette, tarred, 84c; Cyclone, tarred, 78c; Perfection, Sulphite, $3.75 per 100 lbs.

CORRUGATED IRON AND ROOFING, Etc.—Corrugated iron, 28 gauge, painted, $3; galvanized, $4.10; 26, $3.35 and $4.35. Pressed standing seamed roofing, 28, $3.45 and $4.45. Crimped roofing, 28, painted, $3.20; galvanized, $4.30; 26 $3.55 and $4.55.

AMMUNITION—Cartridges, rim fire, Canadian, 50; American, 33; pistol sizes, Canadian, 25; American, 5; military, Canadian, 20; American, 10 p.c. advance. Primers, $1.55. Loaded shells, English and Canadian makes, 12 gauge, black, soft, $18; 10, $22.50; 12 smokeless, chilled, English, $24; Canadian, $23; 10, smokeless, chilled, English, $28; Canadian, $27. Shot: Drop, per 100 lbs., $6.25; chilled, $6.60; buck, $6.95; 28 ball, $7.30. Powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

BAR IRON—Bar iron, $2.35; Swedish iron, $4.75, sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jessop. $13.

PIG LEAD—$5.50. Lead pipe. $7.

SHEET ZINC—Casks, $8; broken lots, $8.50.

COPPER—Planished copper, 29½c per pound; tinned, 26½c.

IRON PIPE—Black pipe, ¼-in., $2.50; ⅜, $2.85; ½, $3.50; ¾, $4.65; 1, $6.60; 1¼, $9; 1½, $10.75; 2, $14.10; 2½, $24.40; 3, $31.50; 3½, $39.50; 4, $45; 4½, $52; 5, $58; 6, $75. Galvanized; ¼-in., $3.50; ⅜, $3.80; ½, $4.25; ¾, $5.75; 1, $8.50; 1¼, $11.50; 1½, $13.90; 2, $18.50; 2½, $30.50.

FITTINGS—Wrought couplings, 55; nipples, 70; classified malleable fittings, 25; malleable bushings, 50; malleable unions, 55 p.c.

GALVANIZED IRON — Apollo, 16-gauge, $4.15; 18 and 20, $4.40; 22 and 24, $4.65; 26, $4.65; 28 $4.50; 30-gauge or 10¾-oz., $5.20; Queen's Head, 20, $4.60; 24 and 26, $4.90; 28. $5.15.

TIN PLATES—I.C. charcoal, 20x28, full box, $9.50; ½ box, $5; IX full box, $11.50; ½ box, $6; IXX, full box, $13.50; ½ box. $7.

TERNE PLATES—I.C. plates, $9.

CANADA PLATES—Half polish, 6 and 7 inch, $3.25; 8 inch, $3.50; full polish, 6 and 7 inch, $4; 8 inch, $4.25.

LUBRICATING OILS—600 W. cylinders, 80c; Maple Leaf cylinder, $1 per gal.; 700 A. cylinder, 75c; Sterling cylinder, 55c; 600 A. cylinder, 50c; Capital cylinder, 59 and 54c; Solar red engine, 32c; Atlantic red engine, 29c; heavy castor, 29c; medium castor, 28c; Ruddy harvester, 30c; standard gas engine oil, 36c; Renown engine oil, 38c.

PETROLEUM AND GASOLINE—Silver Star, in bbls., per gal., 20c; Sunlight, 22c; case, $2.45; Eocene, gal., 24c; case, $2.60; Penniline, gal., 25c; Silver Light, 22c; Starlight, 20c; Sterling Light, 24c. Engine gasoline, gal., 24c; f.o.b. Winnipeg, cases, $2.60.

PAINTS AND OILS — White lead, pure, $6.50 to $7.50, according to brand; bladder putty, in bbls., 2½c; in kegs, 2¾c: turpentine, bbl. lots, 65c. Linseed oil, raw, 64c; boiled oil, 3c per gallon advance on these prices.

J. W. Campbell, manager of the Alberta Portland Cement Co., Calgary, has been compelled to resign owing to ill health.

Trade Announcements

Catalogues, booklets and other printed matter issued by manufacturers, jobbers, etc., for distribution to the retail trade will be reviewed in this department. Senders of catalogues, etc., for review should draw attention to new lines and retailers, when sending for samples, etc., should mention this paper to show that they are in the trade.

CATALOGUES.

Ratchet Handle Pumps.—The Hayes Pump & Planter Company, Galva, Ill, has issued a catalogue describing their ratchet handle pumps which are a radical departure from the usual mode of hand and wind mill pumps. In designing these pumps advantage was taken of a mechanical principle—a cog gear leverage that increases the power and causes the pump to work easily in deep wells, or permits the use of a larger cylinder in shallow wells. The ratchet slide works against a roller bearing, reducing friction to a minimum. The long steel handle with weighted end can be increased in length for deeper wells or heavy work by the insertion of a longer pipe. The pumps are furnished with either hand or windmill top.

Dairy and Sugaring Apparatus.—The Steel Trough & Machine Co., Tweed, has issued two pamphlets regarding their Perfect Maple Evaporator. Steel Dairy Apparatus, Steel Tanks, Troughs, etc. The Maple Evaporator is designed for making good syrups by persons who have small bushes—from 150 to 400 trees. The company make the "Perfect" steel cheese vat, steel whey tanks, galvanized tanks for sweet whey, round tanks and steel water troughs. Some special lines of the Steel Trough & Machine Co. are sanitary dairy pails, wash sinks, cheese hoops, steel gang press, creamers, curd pails, etc. Their line of dairy utensils is worth looking into by the trade.

Starr Skate Book.—The forty-third edition of the Starr Skate Book, issued by the Starr Manufacturing Company, Dartmouth, N.S., illustrates the widely-known different styles and quality of skates made by this company, which include the "Mic-Mac," "Chebucto," and "Starr" hockey skates, as well as the "Mic Mac" and "Rex" hockey sticks. The book, which also contains the rules of the game of hockey, should prove of interest to the trade.

Capewell Horsenails.—The Capewell Horse Nail Co., Toronto, are sending the trade a neat vestpocket booklet, showing the company's large works and explaining the superior merits of the Capewell nails.

Hammocks.—The I. E. Palmer Company, Middletown, Conn., has just published its 1909 catalogue which is handsomely illustrated in colors. The Palmer Company, manufactures cotton fabrics, hammocks, and all accessories, and its superior class of goods, is very popular with the trade. The line of colors and designs for the coming season is very extensive and carefully selected. They are not hasty adaptions from wall paper and tapestry designs, but are practically all careful preparations of an artist of considerable experience and merit in fabric designs. The company has aimed to keep away from the stereotyped floral, ornamental and tapestry designs, offering a range which is strikingly original and artistically correct in the line of hammock designing. The selection covers a broad field of ancient, mediaeval and modern art, embracing Egyptian, Moorish, Napoleonic, Indian, Renaissance and numerous other illustrations of the art of varying periods. The ancient swastika design has been adapted as a hammock design and a patent secured for its exclusive use for this purpose.

Hardware Letter Box

Any questions on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

Boiler Makers' Hand Tools.—F. W. Jeffery, Midland, asks where he can buy boiler makers hand tools.

These are stocked in Toronto by Rice Lewis & Son and the Canadian Fairbanks Co.—Editor.

Ice Cream Dishers.—Emerson & Fisher, St. John, have asked where ice cream dishers are manufactured.

The Erie Specialty Co., Erie, Pa., are makers of these goods.—Editor.

PATTERN RULE FOR TINSMITHS.

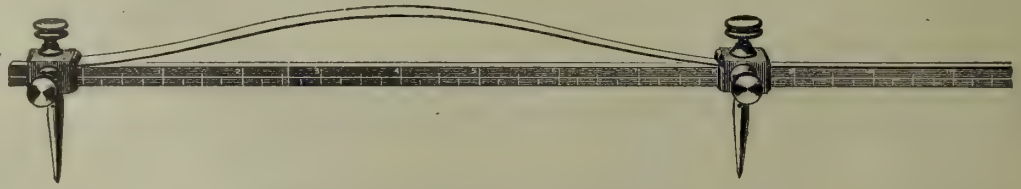
Among the numerous labor-saving devices that have been brought out in recent years, inventions for helping the practical tinner seem to have been somewhat limited. The Lufkin Rule Company of Canada, however, are offering to this trade some articles which are worthy of notice.

The Magic Pattern Rule is a tool for laying out elbow and other patterns in the tinshop, and is a great time-siver. It consists of a square metal bar, with sliding trammel heads with set screws and steel points. For laying out elbow pattern the left-hand set screw is fixed at the end of the bar, and the right-hand set screw is fixed according to diameter of the elbow that is wanted. A flexible steel ribbon is raised to the required height, according to angle wanted; one glance at the chart which accompanies the rule giving such height necessary. The outfit is then set ready for a pattern.

The bar is graduated in inches and eighths on one side and circumference inches other side. The whole outfit is nicely nickelplated. The chart contains besides the elbow diagrams, valuable rules for cutting all sizes and shapes of vessels by aid of the Magic Pattern Rule. Tinners who have used this outfit but a short time state they find it a wonderful convenience, and those who have already had their troubles in the tin shop will no doubt appreciate its value.

Another indispensable article to the up-to-date tin shop, is the tinner's circumference rule. This is a steel rule of convenient size, one side of which is graduated in inches and sixteenths top edge, circumference rule bottom edge. On the reverse side are valuable tables of measurement giving sizes of vessels of different capacities and varying shapes, and other information.

Catalogues giving detailed descriptions of these articles can be obtained by addressing the Lufkin Rule Company of Canada, Windsor.



Magic Pattern Rule for Tinshop.

IT WASN'T OIL.

An Ohio man joyfully sought an oil expert, declaring that he had struck oil on his land. He brought a sample in a bottle. Evidently he had been in a great hurry, hastily seizing the first bottle at hand, for when the chemist had analyzed the sample he sent the following telegraphic report:

"Find no trace of oil. You have struck paregoric."

Motion in the shop window, of any sort, draws a crowd of lookers-on through curiosity merely. But it requires a detective to tell how many who have been amused go in the store to trade.

EDMONTON, ALBERTA

Every Dealer Should Stock S-W Screw Press Linseed Oil

STRICTLY PURE SCREW PRESSED RAW LINSEED OIL MADE BY THE SHERWIN-WILLIAMS CO. PAINT & VARNISH MAKERS MONTREAL.

You know the importance of *quality* in linseed oil. It is appreciated by users probably more than quality in any other painting material for the reason that it is now so hard to get really good oil. Painters especially, who are the largest users of linseed oil, want *good* oil and buy where they can be sure of getting it.

That's why every merchant should handle Sherwin-Williams Screw Press Oil. It is much superior to the ordinary commercial linseed oil. Years ago we found that to further improve the quality of our paints and varnishes we must improve the quality of the linseed oil we used. We had previously been buying oil on the open market, refining and removing impurities from it. Since we started to operate our own mills, however, we have been able to produce a quality of oil much superior to any we had ever been able to get on the open market.

As the manufacture of our paint and varnish products does not at present consume the entire output of our mills we have a limited surplus, which we offer for sale through the paint trade. You should take advantage of this opportunity to get a superior quality of oil. Write us for full particulars and prices.

THE SHERWIN-WILLIAMS CO.
LARGEST PAINT AND VARNISH MAKERS IN THE WORLD.
Canadian Headquarters and Plant: 639 Centre St., Montreal, Que.
Warehouses: 86 York St., Toronto, and Winnipeg, Man.

COMMERCIAL HANDBOOK OF CANADA.

The fifth annual edition of the "Commercial Handbook of Canada, published at one dollar, by Heaton's Agency, Toronto, has been issued.

In the first part is collected a directory of the Dominion and Provincial Governments, postal information, railway fares from Toronto and Montreal to every commercial town in Canada, banks and branches, insurance, list of solicitors, credit reports and collections, Canadian railways, steamship lines, customs ports regulations and tariff revised to date.

The second part, under the heading, "The Canadian Encyclopedia," is a digest of the latest reports of the Dominion and Provincial Governments, arranged alphabetically in concise paragraphs under such headings as "Agriculture," "Agricultural Lands," "Area," "Commerce," "Finance," "Fisheries," "First Things in Canada," "Forests," "Immigration," "Manufactures," "Mining," Mining Companies Operating in Canada, Temperature and Rainfall, etc.

The "Boards of Trade Register" included in previous editions has been revised to date. This contains a concise description of every town in Canada of 1,500 and over in the East, and 400 and over in the West, giving railway and steamship connections, hotels and rates, existing industries, and in a footnote returns from the Mayor and local Boards of Trade of the opportunities offering for manufacturers and investors, and the privileges granted to new industries.

CALENDARS RECEIVED.

The Canada Paint Co., Montreal, has issued a large attractive calendar representing a lady just returning from a trip in her automobile and leaving the car to enter her prettily painted suburban villa.

The London Printing & Lithographing Co., London, forward a calendar which depicts a charming lady in a red winter suit and furs out for a walk when the snow is falling.

Linton & Hall, hardware dealers, Calgary, send a beautiful calendar. A lady gowned in dark red and carrying a bouquet of roses is revealed as she parts the curtains to descend the steps at an evening reception. The picture is decidedly attractive.

Carter Bros., hardware dealers, Picton, issue a neat calendar representing a young lady in riding habit standing by the head of a handsome horse.

Ludger Gravel, Montreal, who handles blacksmiths' supplies, has sent to the trade a unique embossed calendar representing a sturdy smith seated on an anvil, hammer in hand, gazing out of the open window. The calendar is one of the most unique and pleasing character.

B. Greening Wire Co., Hamilton, in their calendar, give a splendid bird's-eye view of the office and large works of the firm, which was established in 1859. Cuts of the owner, members of the Greening family, appear along the scene of the works. The firm is now engaged in the preparation of a new series of catalogues, which will shortly be forwarded to the trade.

The Capewell Horse Nail Co., Toronto, are presenting their patrons and friends with a calendar which is a work of art. It is a reproduction in colors of a painting entitled "A Famous Smithy." John Paisley, the "blacksmith parson," of Gretna Green, Scotland, is represented in the act of marrying a runaway couple from England, the angry father driving up just too late to prevent the ceremony.

APPOINTMENT OF HOTEL COMMISSIONER.

The fact that the Provincial Government has appointed a special commissioner to investigate the question of equipment of Ontario hotels will be received with satisfaction by the commercial travelers. The appointment has been given to W. K. Snider, Provincial organizer for the Conservative party for the past three years, and his duties begin immediately. At the banquet of the Canadian Commercial Travelers' Association, held a couple of weeks ago, Hon. W. J. Hanna promised that such an appointment was coming.

Mr. Snider's duties will be to deal with the whole question of the conditions and equipment of the licensed hotels in the Province of Ontario with a view to making them more suitable and safe to the traveling public. The new official will take charge of all improvements which the commercial travelers have been urging upon the department. Probably the most important of these is a proper system of fire escapes, as recent fires at Coldwater and Niagara Falls, when lives were endangered through lack of proper equipment, would indicate. Travelers are too often subject to danger in this respect, particularly in hotels in the smaller places. They are always on the road and a hotel fire is almost sure to effect one or more of them.

Besides the question of fire escapes, there are the sanitary arrangements, bedding, proper accommodation for transients, etc., to be attended to. All these will come under the supervision of Mr. Snider.

The License Department anticipate that the commissioner's work will probably cover between one and two years, during which time it is anticipated that he will have established such standards for hotels as can be permanently continued.

This new departure of the Government is along the lines advocated by The Grocer after the disastrous Tillsonburg hotel fire, and which have subsequently been advocated on several occasions. Protection of the lives of travelers is an important thing and the new legislation will be gratefully received by the travelers.

TORONTO INSURANCE RATES REDUCED.

The successful test of the new high pressure fire protection water system in Toronto has resulted in a lowering of the insurance rate on buildings in the "congested" or business district of that city by 25 cents per $100 of insurance. Some manufacturers and merchants expected a drop of 50 cents, as they say this was promised on condition that the city instaled the high pressure system. The Fire Underwriters, however, say that after the big fire of five years ago the association promised a reduction of 50 cents from the key rate on condition that certain improvements were made, a certain value being placed on each condition. According to the insurance men, the city has earned but 23 cents reduction, but the association voluntarily gave the extra two. It would be difficult to place an estimate of the amount saved those placing insurance because of the lower key rate, but, roughly, one authority says it means a saving of $250,000 a year.

Hardwaremen who have their establishments in the centre of the city do not feel in a position to say much regarding the reduction.

S. R. Kennedy, of the Kennedy Hardware Co., says he usually places his insurance with the company which makes the best offer. No doubt, he says, the reduction will help some in getting a lower rate than formerly.

A. E. Gilverson, of Rice Lewis & Son, was not sufficiently informed to make a statement. He understood the reduction was on a percentage basis, but did not care to express himself until more thoroughly acquainted with the matter.

W. H. Carrick, of Gurney Foundry Co., said his company would not benefit. They were outside the "congested" district, and, anyway, they came under the special sprinkler rate, which was not at all affected.

Peleg Howland, of H. S. Howland, Sons & Co., had not yet come across a specific instance where the new rate would apply, and had not sufficiently looked into the matter to express an opinion at present.

FRENCH TREATY WILL PASS.

With some modifications it is expected that the Franco-Canadian treaty will be ratified by the French Senate. This information has been received in a despatch from Paris this week and the prospects for the sanctioning of the proposed treaty seem to be very bright. Hon. W. S. Fielding is still in Paris conferring with members of the French Government respecting the treaty. The matter has been before the French Senate for months and has aroused considerable interest in Canada among business men.

The building returns for the past year totalled $5,947,423, being over $300,000 more than in 1907. In that year the total was $5,622,744.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal waterworks and sewerage systems, railway or mining news, etc.

Industrial Activity.

The West Presbyterian Church, Toronto, will erect a new building.

The by-law to grant a loan to the Plough Works in Port Stanley was defeated.

The plant of the Western Ontario Portland Cement Co., Attwood, Ont., will be sold.

The by-law to loan $20,000 to the Standard Implement Co. was defeated in St. Thomas.

The electric light plant and Walsh's roller mill, Ormstown, Que., were recently destroyed by fire.

The Hydraulic Manufacturing Co., of Seattle, have opened a water pipe making plant in Victoria.

The Section Acetylene Gas Machine Company's plant will be removed from Belleville to Aylmer, Ont.

A by-law to give E. Brown & Son, carriage manufacturers, Midland, a fixed assessment for ten years, was defeated.

The wholesale warehouse of Codville & Co., Brandon, was destroyed by fire. The loss is $75,000, and insurance $60,000.

The contract for the Toilet Laundry Company's new building, Toronto, estimated to cost $8,000, has been awarded to Whyte & Company.

The by-law to bonus the Wormwith Piano Co., which was recently burned out, to the extent of $10,000, was carried by a large majority in Kingston.

The Waterloo Manufacturing Co., Waterloo, Ont., presented all their employes who have been with the company for 20 continuous years with $100 cheques as a holiday gift.

Milton property owners carried a by-law to guarantee the bonds of the P. L. Robertson Manufacturing Co., screw manufacturers, $10,000 for ten years, and pay the interest thereon.

Niagara Falls centre will have a new factory erected by Brooklyn capitalists to manufacture boxes and other products from corrugated paper. A site has been selected and 200 hands will be given employment.

Building Notes.

Denison & Stephenson will erect a three-storey business block in Toronto to cost $15,000.

Dr. L. McKechnie will make alterations to his office building in Vancouver which will cost $10,000.

Vancouver will have new stations erected by the Great Northern and Northern Pacific Railways.

The total value of building permits in Toronto for 1908 was $12,447,467, as compared with $14,225,800 during 1907.

The building permits in Stratford during the past year totalled $136,545, as compared with $641,485 of the year previous.

The number of building permits issued in Montreal during 1908 was 1,283, and the aggregate value $4,317,753, which was $3,343,903 behind the year previous.

It is understood that a new wing will shortly be built to the Ontario Legislative Buildings. In it will be located the library, archives, patent surveys department, etc.

Victoria, B.C., issued building permits to the extent of $1,121,140 during 1908. In the last fifteen years new structures have been erected in Victoria to the value of nearly $9,000,000.

Recent building permits in Toronto include: Mrs. M. Wright, dwelling, $3,500; Wm. H. Coon, pair dwellings, $3,500; R. C. Bustard, two dwellings, $4,000; J. T. Hutson, dwelling, $3,500; H. Huston, dwelling, $3,500; G. H. Weale, & Son, dwelling, $3,300; W. Hughes, pair dwellings, $4,600; Wilkins & Co., two dwellings, $7,000; John Houden, dwelling, $3,000; F. Courtmanche, dwelling, $3,200; F. G. Mara, dwelling, $6,000; W. H. Carter, dwelling, $2,200; Gratton Bros., dwelling, $3,600; W. Bebbington, dwelling, $3,000; Kay Bros., two detached dwellings, $9,000.

Municipal Undertakings.

Burlington carried a by-law in favor of a waterworks system.

Almonte carried a by-law to raise $15,000 for street improvements.

Hamilton carried a by-law to expend $65,000 on the extension of sewers.

The by-law to expend $3,000 on waterworks extension was defeated in Port Elgin.

The by-law to expend $60,000 on children's play grounds was defeated in Ottawa.

The by-law to expend $40,000 on septic tanks in St. Thomas was carried by a good majority.

The by-law to provide $12,000 for electric light department carried by a big majority in Barrie.

Meaford carried the by-law to put in a new filtering basin in connection with its waterworks system.

The by-law to enlarge the sewerage disposal system, involving an expenditure of $25,000, was carried in Stratford.

Galt defeated a by-law to raise $10,000 for good roads, and also a by-law to purchase additional land for park purposes.

Eight money by-laws for various works, including $25,000 for further power development on the Current River, carried in Port Arthur.

The Ontario Government have approved of the good roads proposals for Frontenac County. The total expenditure will be $160,000. There are 104 miles of road to be improved.

Three money by-laws: $30,000 to purchase Exhibition Park; $49,000 for Smith Street bridge, and $21,500 for street extensions already made, were defeated in Peterborough.

An ammonia plant is the latest civic revenue producer in St. Thomas. The 6,000 tons of coal carbonized yearly at the works will produce about 18,000 pounds of ammonia, giving the department a revenue of $900 yearly on an investment of $2,000.

The B.C. Government have awarded the contract for planking the streets and laying sidewalks on the central section of the Prince Rupert townsite to W. W. Forrester, of New Westminster, his tender being the lowest. The contract price is about $200,000.

In a score of municipalities in Ontario on election day by-laws were voted upon in connection with the Ontario Government power scheme. In all but two places—Brantford and Kingsville—the verdict of the ratepayers was favorable, which means that the scheme of Hon. Adam Beck will have to be extended and the operation of the Hydro-Electric Commission enlarged as far as Detroit and the St. Clair River. The work of the Niagara Falls Power Commission is evidently appreciated by the people. The places in which the by-law carried are: Amherstburg, Bothwell, Chatham, Comber, Dresden, Dundas, Elmira, Essex, Glencoe, Leamington, Norwich, Port Stanley, Ridgetown, Sandwich, Simcoe, Stratford, Tilbury, Tillsonburg, Walkerville, West Lorne, Windsor.

Public Buildings.

Elora carried a by-law in favor of a free public library.

Mount Forest carried a by-law to establish a free library.

The Carnegie Library by-law was carried in Strathroy.

Port Arthur will erect a Collegiate Institute, to cost $60,000.

Amherstburg defeated a by-law to erect a new public school.

The by-law to erect a new $20,000 high school was carried in Oshawa.

The citizens of Welland defeated a by-law to raise $15,000 for a new public school.

The by-law to issue $100,000 debentures for a new Collegiate Institute was defeated in Brantford by a majority of 783.

The by-law to expend $200,000 on hospital improvement and extensions in Toronto carried by a substantial majority.

The by-law to raise $30,000 for increased accommodation for nurses at the city hospitals in Hamilton was defeated.

By-laws to appropriate $15,000 for a ward school, and $3,000 for an isolation hospital were carried by large majorities in Waterloo.

Brantford defeated the by-law for a grant of $5,000 for a nurses' home in connection with the John H. Stratford Hospital in that city.

Ottawa carried a by-law authorizing improvements to the city market, but defeated a by-law to expend $60,000 on an extension of the city hall.

Niagara Falls carried three by-laws: $3,000 for a site for a new $45,000 armory; $8,000 for new fire hall, and $2,500 for a location for a $12,500 Carnegie Library.

The by-law to appropriate $5,000 for a consumptive hospital was carried in London. The by-laws to provide public swimming baths and public play grounds met with defeat.

News of the Paint Trade

PAINTING OF ROOFS.

The attention of property owners is directed to the wisdom of keeping tin roofs well painted. To those who are unfamiliar with such matters invaluable advice can be obtained from the average roofer who possesses reliable information as to the character of paint needed to properly protect exposed metal work. In this connection it has been argued that invariably where roofs, gutters, eaves, trough and such equipment are to be painted there is necessary also the services of an expert workman to make needed repairs before the painting is done.

Work of this character quite properly falls to the expert roofer, and is unquestionably not the province of the all-around mechanic. There is little want of evidence that some of the paints frequently used on such work, instead of being a protection from the elements, act as a live agent of destruction to the best sheet metal made. Good paint and good workmanship should go hand in hand, especially where roofs are concerned.

THE GROUPING OF CANS.

A miscellaneous number of cans with various colored labels should not be grouped together. It is not exactly bad taste to have several specialties in the window, but they should be strung out or scattered singly, never grouped together. Groups or pyramids should always be formed of cans of the same colored labels.

We would not be understood, says The Paint, Oil and Drug Review, as advising only one specialty in the window at a time, as we stated above that it is not bad taste, but we firmly believe that the best taste is the appearance of only one color of labels in the window at a time. For instance, suppose the labels of the cans are brown. If the flooring and back and sides of the window were covered with brown muslin or crepe paper the effect would be striking. One can easily picture the pleasing result of an all-brown effect. The back, if entirely draped, however, would shut out the light, so that part could be left open with good effect. The same hue predominating always lends richness. Brown cans look best in a brown window, just as a brown-haired girl looks best in a brown dress.

Then, of course, there are the color combinations to be made use of. If your cans are red and the flooring green the effect is lost. Cover your window floor with black cloth, bunching it in a loose draped effect around the edges to hide the bareness, and you have a pretty combination, red and black. Combination in color is an advantage in every situation. How particular a man is when he chooses the colors for his house. And how attractive his house appears if the colors are well matched. The same result is attained in the window; the dealer should be just as particular there in considering color or display. It is one of the fine points of the game which is well worth attention.

If you want to stock the VARNISH that will bring customers back to your store for more VARNISH, and tell their friends where to get good VARNISH, that VARNISH is undoubtedly

Paint and Oil Markets

MONTREAL.

January 8.—An after-holiday feeling of dulness pervades the paint, oil and varnish trades, and the general answer to inquiries as to business has been very much on the lines of "nothing doing." Travelers have this week been looking after their samples and putting their price books in order, previous to setting out on their spring campaign

Hardware dealers are now commencing to take stock. Owing to the character of the buying during last year many lines will be found unusually light. It would be wise, therefore, for merchants to cover themselves thoroughly when the travelers come round. Both manufacturers and jobbers are preparing for a heavy year, and dealers should have confidence to do the same thing. The markets have kept unchanged, and there has been an absence of life to each line with perhaps the exception of putty.

TURPENTINE—Turpentine, although feeling the after-effects of the holidays, has received a fair amount of attention. There is no change in figures, and we continue to quote 56c for single barrels.

LINSEED OIL—A quiet feeling has characterized the linseed oil situation. Shipments have been light, and prices are unchanged. We quote: Raw, 1 to 4 barrels, 55c; 5 to 9 barrels, 54c; boiled, 1 to 4 barrels, 58c; 5 to 9 barrels, 57c.

GROUND WHITE LEAD—Some few inquiries have been received, but they have been more of the nature of gauging the markets than for actual requirements. There is nothing to note in the situation, and we quote: Strictly pure, $5.50 to $6, according to brand; and No. 1, $5 to $5.50 f.o.b., Montreal.

RED LEAD—A few shipments have gone out, and the market is reported as being steady to firm. We quote: Genuine red lead, in casks, $4.50; in 100-lb. kegs, $5; in less quantities, at $6 per 100 lbs.; No. 1 red lead, casks, $4; kegs, $4.50, and smaller quantities $5.50.

COLORS—Nothing unusual has occurred in colors, and what may be termed the lighter class of paints and stains, although some firms report good booking of liquid paints for spring shipments.

PARIS GREEN — The Canadian manufacturers of Paris Green have issued a new price list as follows, subject, however, to change at any time. These prices are strictly f.o.b. Montreal. For delivery at outside jobbing points freight will be added. We quote: Government standard strictly pure Paris Green in barrels, about 600 lbs., 19¼c; arsenic kegs, 250 lbs., 19½c; 50-lb. drums, 20c; 25-lb. drums, 20½c; 1-lb. packets, 100 lb. case, 21c; 1 lb. packets, 50 lb. case, 21½c; ½ lb. packets, 100 lb. case, 23c; 1 lb. tins, 100 lb. case, 22c per pound.

VARNISHES—Owing to the larger shops having been closed during the holidays a slackness has prevailed in the varnish departments. The cheaper classes of quick drying house varnish, however, have been going fairly well,

WHITE ZINC—Some small packages have been shipped, but the tone of the market is dull. There is no change in quotations: Dry V.M. Red Seal, 7½c; Red Seal, 7c; French V.M., 6c; Lehigh, 5c; White zinc ground in oil, pure, 8½c; N . 1, 7c; No. 2, 5¾c.

PUTTY—Putty has probably shown the best shipments during the week, the mild weather in Western Ontario having facilitated glazing operations. We quote: Standard putty, 800-lb. casks, $1.65; in 100-lb. drums, $1.90; bladder putty, 400 lbs., in barrels, $1.90; in 100-lb. cases, $2.05; in 25-lb. drums, $2; 25-lb. tins, $2.05; 12½-lb. tins, $2.25 f.o.b. Montreal.

TORONTO.

January 7.—A pretty comfortable feeling pervades the paint trade this week. Travelers went out on the road last Monday and they expect to send in some good orders in a few days. Their optimism is contagious and jobbers themselves speak more than hopefully of the future. They speak with a "know" ring in their voices. Certainly a decidedly improved condition looms up than was the case a year ago, and on all sides the hum of activity is becoming more distinctly heard. Stocks are still low and buyers are enlarging their orders cautiously and conservatively. This is well, for while 1909 will show a big advance, industrially, over 1908, there will be no sudden jump of the boom variety. Rumors from England and various parts of Canada say that there will be a firmer tone to the paint market by the spring time, and that it is not unlikely that white lead will advance in price. Paris green prices for this year are out, and, roughly, are between five and six cents lower than last year.

TURPENTINE—In regard to this line Savannah reports say that although there was an anticipation that on account of the holidays there would be an accumulation of turpentine on the market and possibly a slight decline, really no weakness has been experienced in the price, but the market has opened with an unexpected strength and considerable buying, and all the goods that were accumulated Christmas week were readily disposed of at regular prices, and the later part of last week indicated an advance of from ¼c to ½c per gallon. Local prices remain as they have been for the past two weeks, 57c in one barrel lots, and 56c in larger quantities. One house, however, quotes 55c and 54c.

LINSEED OIL—There has been no change in the linseed oil market. As travelers have all been home for two weeks past, business has been very dull. A change in this regard will, no doubt, take place right away, as the representatives of the paint and oil houses are now out. Everyone is aware that the present Canadian price is below the figure at which oil could be imported, so

Not a Minute Too Early

to give serious thought to taking up the "ENGLISH" LIQUID PAINT Agency, for next Spring.

The dealer in your town who has a stock of these well-known, well-advertised and well-liked Paints, will get the trade.

HERE'S A TALKING POINT

for Moore's Pure Linseed Oil H. C. Paint, that you can use with telling effect:—The price is lower than that charged for other paints which claim high quality because we do not spend large sums in extensive advertising campaigns. We put the money *into the paint.* We use only pure linseed oil; the purest pigments obtainable; and we give our paint absolutely thorough grinding.

HERE'S THE PROOF

Take a clean board and give it one coat of Moore's Pure Linseed Oil H.C. Paint any color. Then take a few more clean boards and paint them with a coat each of any other prepared paints on the market. *Then compare results!*

A. M. BELL & CO., Halifax, N.S., Agents for Nova Scotia, P.E.I. and Newfoundland

that any change that may take place here is pretty sure to be for an advance. Quotations are yet at 55c for raw and 58c for boiled.

PARIS GREEN—The prices for 1909 are here published. They are, of course, f.o.b. Toronto. Barrels, about 600 lbs., 19½c; arsenic kegs, 250 lbs., 19¾c; 50-lb. drums, 20¼c; 25-lb. drums, 20¾c; 1-lb. packets, 100 in case, 21¼c; 1-lb. packets, 50 in case, 21¾c; ½-lb. packets, 200 in case, 23¼c; 1-lb. tins, 100 in case, 22¼c. These prices are for Government standard pure Canadian manufactured Paris green.

GROUND WHITE LEAD—Jobbers are waiting to fill spring orders, and it is likely good trading will be done. Rumor says this line will advance before long. At present quotations are at the old figures, pure $6, and No. 1, $5.65. Genuine red lead is $4.50 in casks, though one house is asking $4.80.

STAINS AND VARNISHES—These lines, with ready mixed paints, are quiet just now. Prices are unchanged. Before spring comes round these lines are expected to be active again.

GLASS AND PUTTY—Quotations are still at thirty off box list and fifty off pane list. There is likely to be no change until the spring. Trade is quietly steady. Putty, too, remains unchanged. Pure bulk, in casks, is $1.80 to $1.90; ordinary, $1.60 to $1.70; pure, in 100-lb. drums, $2.15 to $2.25; ordinary, $1.90 to $2; bladders in barrels, pure, $2.10 to $2.20; ordinary, $1.85 to $1.90.

PETROLEUM—Splendid business is being done, the long nights conducing to much trading. Old quotation figures still hold. Prime white oil is at 13½c; water white, 15½c; and Pratt's Astral, 17½c a gallon.

KEEP STORE BEFORE PUBLIC.

The greatest results from advertising and publicity expense indulged in by the dealer generally come in long after the indulgence happens, says the Paint, Oil and Drug Review. Keep your name before the people. When they want to buy paint, they first will think where they are to get it. Have they ever heard of you? If they have seen your name in the papers and your many circulars, your name will flash immediately into their minds. An attractive window is another booster of your name. And here is where mechanical display shows its value. Suppose you have in the window the likeness of a human figure constructed of paint cans. There are no cards in the window recommending painting nor is there anything calling attention to the particular kind of paint. It is just a startling figure, an object which will command the attention of nine out of ten that pass. They stop to admire it for it demands more than passing attention. Here are some of the thoughts that would enter into everybody's mind: "There is something original," "That storekeeper is a clever fellow," "He must be prosperous and doing a big business or he couldn't afford the expense." The main thought is, there's an up-to-date paint store, a paint store that is a paint store. Many will look for the name up above, and no one will forget where that store was located. Whenever, months or years after, the time comes that they desire to paint, they will have to think of a paint store. Isn't it natural to believe they will think of that store? It is the only one they can think of, because it was the only one that attracted their attention. In the cities your store has got to attract or the people in your district will buy downtown. In the country your store has to be more attractive than your rivals. That is, you must keep your name stronger and more impressively before the people than do your rival competitors.

So here we have shown the greatest result from newspaper advertising. The indiscernible result, but which, nevertheless, is so natural, that it must be true. Also the advantages from these mechanical windows, the ones formed of objects entirely foreign to the thought of paint, and which are laughed at by so many of the dealers to-day. Yet they are builders of that name of yours, and some day you will realize that the popularity of your name is the greatest trade puller that you've got.

ANTIMONY PAINT.

Within the last few years, and more particularly in France and Italy, white antimonial pigments have come into use for first-class paints, and are growing in favor. Antimony is rarely met with native, though it is abundantly found in combination with sulphur, as antimonious sulphide, forming the mineral antimonite or antimony glance, which resembles lead in color, is brittle, and forms the raw material of most of the other compounds of the metal. According to the most recent statistics available, the production of antimony ore in France amounted to 12,500 metric tons, and 2,400 tons of metal, whilst Italy produced 5,000 tons of ore and 327 tons of metal, whilst China accounted for 2,000 tons of ore and 1,850 tons of regulus. Other producing countries are Spain, Canada, the United States and South Africa.

A number of prosperous metallurgical companies are engaged in the antimony industry in France and Italy, one of the largest being a Franco-Italian company at Genoa. The Italian works of this company now produce antimony pigments exclusively, the French works turning out metal as well, though the proportion of the latter is declining by reason of the profitable nature of the pigment industry. Both the French and Italian Governments are fostering the employment of antimony pigments, which are non-poisonous and are more stable (especially with regard to fastness to light) than zinc white. There is also a growing trade with England, and it seems highly probable that other antimony works will abandon the production of metal in favor of the oxide and sulphide.

THE C.P. CO.

THE CANADA PAINT COMPANY'S COLORS and VARNISHES are made absolutely by themselves. This insures uniformity.

THE CANADA PAINT COMPANY'S VARNISHES are made for all who are looking for a good article properly manufactured at a fair price.

THE CANADA PAINT COMPANY'S COLORS and VARNISHES are tested and reported on by their practical staff before shipment.

THE CANADA PAINT COMPANY'S LIQUID COLORS after being well stirred in the can by the purchaser will flow smoothly and evenly.

THE CANADA PAINT COMPANY will cheerfully mail color cards to show the scope and variety of their manufactures.

THE CANADA PAINT COMPANY wishes to state that microbes, germs and dry-rot have "no habitation or abiding-place" where their paints, colors, stains or varnishes are used.

THE CANADA PAINT COMPANY'S COLORS should be applied wisely and well. They will be found to be very economical.

THE CANADA PAINT COMPANY has a good class of customers who are desirous of selling a good class of paint and varnish.

CURRENT MARKET QUOTATIONS.

January 9, 1909

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, th lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Amatite ROOFING

Needs No Painting

If you had a sample of Amatite in your hand you would see in an instant why it needs no painting or coating to keep it waterproof.

It has a rough surface of *real mineral matter* on the weather side.

It is evident to anyone that it is no more necessary to paint such a surface than it is necessary to paint a stone wall. Stone needs no paint; neither does Amatite. It is strong enough in itself to bear the brunt of rain and wind and sun without a protective coat of paint.

To paint Amatite would be a waste of time and trouble.

Amatite will last for many years without any care whatever. It is made to be *trouble proof* as well as *weather proof.*

A roofing that consists of smooth materials, made to receive a heavy coating of paint, is not a roofing at all—the paint is the real roof. If you are told that certain roofings don't need painting when first laid, don't be deceived into thinking that they are like Amatite. The first coat of paint has been applied at the factory—that's all, and it will wear off in a little while and require renewal.

No paint is good enough to make a durable roof; a thick layer of pitch faced with a real mineral surface, is far better—and that means Amatite. **Free Sample and Booklet**—A Free Sample with Booklet will be sent on request to our nearest office.

Read a Few of the Comments of the Leading London Dailies on the Supremacy of the Ross Rifle at the 1908 Bisley Meet.

"Long range Champion, breaks all records, a rifle of wondrous precision." *London Morning Post, July 16th.*

"Records broken at Bisley. A fine Canadian rifle." *London Daily Express, July 16th.*

"Record scoring with the Ross rifle." *London Daily Telegraph, July 15th.*

"Champion of the year." *New York Herald, July 16th.*

"Performance phenomenal by the Ross rifle." *London Field, July 18th.*

"The new Canadian rifle has made an unexpected and altogether successful appearance." *London Daily Mail, July 15th.*

"Great triumph for the Ross rifle which has beaten all the world's rifles." *London Standard, July 15th.*

"Many experts declare that Ross rifle better than new U.S. Rifle." *Nottingham Guardian, July 17th.*

"An individual triumph, the Lee-Enfield hopelessly beaten." *London Morning Post, July 15th.*

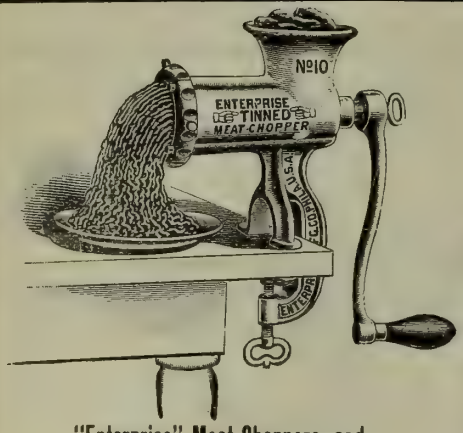
"The Ross rifle achievements were truly remarkable." *London Evening Standard, July 15th.*

"Great victory for the Ross rifle from Canada." *London Daily Express, July 15th.*

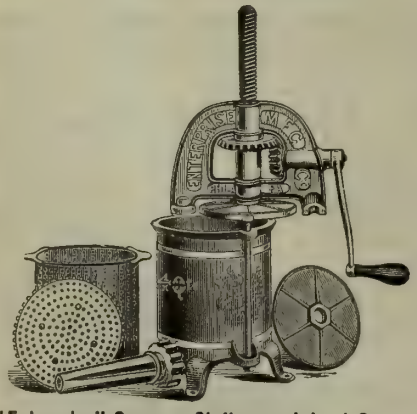
"The rifle of the future is the Ross rifle." *London Times, July 16th.*

"A'plague of possibles' with the Ross rifle." *London Sphere, July 15th.*

THE ROSS RIFLE CO., - QUEBEC



"Enterprise" Meat Choppers and



"Enterprise" Sausage Stuffers and Lard Presses

DRIVE THESE TANDEM!

Every user of an **"Enterprise" Sausage Stuffer and Lard Press** needs an **"Enterprise" Meat Chopper.** Sell them together. Push them together. Drive them "tandem."

Every dealer and almost every buyer, knows the superiority of genuine "Enterprise" Choppers.

Lest you forget we remind you of these points about the **"Enterprise" Sausage Stuffer and Lard Press :**

Accurately-bored cylinder. Lips on the inner tin cylinder to make easy its handling when heated. No hot iron cylinder to handle when pressing lard. A patent latch which prevents breaking of plates. Patent corrugated spout prevents air entering the casing thus assuring preservation of sausage.

Write for catalogue describing, illustrating and listing these and other "Enterprise" specialties. Get our advertising aids for dealers.

The Enterprise Mfg. Co. of Pa.,

Philadelphia, U.S.A.

21 Murray Street, New York. **438 Market Street, San Francisco.**

Round Spur-Geared Blocks

The Best Is None Too Good

when every minute counts. You are losing money by using slow-speed hoists. Why don't you get the best? If you do not know what they are, we will tell you right here that **The Round Spur-Geared Blocks** raise the load twice as fast and with less exertion than any other blocks made.

Style No. 2—3 to 5 tons.

Don't use that slow block get an up-to-date **Fast one.** Do you know that **50 per cent.** of the time spent in lifting is cut off by using **Round Spur-Geared Blocks.**

Round Spur-Geared Block with gear case removed.

Idle men, idle machinery means reduced profits. Did you ever stop to realize what you are losing by using slow-speed blocks.

A trial of these blocks will convince you of what we say.

Ask our travellers to quote or write us direct.

form but a small portion of our stock, but their well-selected variety is an example of the care exercised by us in choosing the goods we offer you.

Our tool trade has always been especially satisfactory and it is due to the fact that we have the goods that sell and please.

We handle only tools that are well made, thoroughly tested, perfectly adapted to their intended use, and sell them under the maker's name and back up his reputation with our own.

The squares on this page are only a few of those we have in stock. Our travellers will show you the complete line in their catalog. We have the largest stock of tools of any house in Canada.

Star Safety Razor

(The Pioneer)

is conceded by practical cutlers, and millions of users to be the **best Safety Shaving device in the world.** It is in a class by itself, being the **only Safety Razor** having an extremely keen **blade** that is made from double refined Sheffield steel that will **last for years** with practically no expense. It will pay dealers to stock **Star Safety Razors,** for with every sale they make a friend and customer. Why? Because they are giving value for money invested and selling an article that will positively give satisfactory results. (Over seven million have been sold in the past thirty years.)

SOMETHING NEW

THE

Soss Invisible Hinge

When a door is shut you cannot see any part of a Soss Invisible Hinge. The Soss Hinge is built on an entirely different plan to the ordinary butt hinge, being superior to it for all purposes. On very fine work like book cases, ladies' desks, wardrobes, pianos, china cabinets, etc., the large manufacturers are using the Soss Invisible Hinge almost exclusively. Just as easy to apply as the ordinary butt hinge, too.

Write for Illustrated Booklet.

Why the "Galt Kind" Pays the Dealer——

The high quality of "Galt" Sheet Metal —its features of design and construction —has already established a reputation in every locality where it has been used. There is money in this reputation for the Hardware man who is introducing or selling Sheet Metal Building Goods.

1909 will certainly bring a big demand for Metal Roofing, Siding and Ceiling and Lath, for buildings being built or repaired. Our goods and our advertising make this a demand for the "Galt Kind." Get ready to supply it by asking us at once for catalog, prices and particulars of our proposition.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from Wholesalers, Manufacturers and Retail Dealers, who usually intimate they have ooked through Hardware and Metal, but cannot find any firm advertising the line in question. In the majority of cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay them to advertise in larger space.

IF some of you Manufacturers and Wholesale Hardwaremen

could see the many letters we get every week from our subscribers

You would get acquainted with the fact that they watch for your ads. every week, that they keep in touch with live people in this way.

You would learn some facts you haven't studied, that you can *make more money* by considering and planning for the co-operation of the Retail Hardwaremen *first,* and not last.

You would realize that it pays you to talk to them with good business tact, with prices, about quality of goods, new lines, etc. And you would have more customers—

Do You Want More Customers in 1909?

Tell the hardwaremen of Canada about yourself, your house, your goods, your methods, etc., in a series of ads. in

Hardware and Metal

Toronto Montreal Winnipeg New York Chicago London

IF STOCK-TAKING'S THROUGH !

Suppose the shelves
Are once more clean
Wrapping paper on the go,
Now, considering the robin's chirp's been heard,
Would it not be fully wise
To call for "Caloric,"
The name under which
McClary's Gas Ranges serve the home.

You've read of all
The features to be
Found on this gas stove,
Made in a multitude of styles and sizes,
Not one of which will take back water
From another line.

With that seven acre plant—
Those seven acres of ideas, energy, know-how
"Caloric" has got the stride
Which goes with all things "Famous,"
And can't help but win its way.

If you've lost the catalogue,
That tells you all about "Caloric,"
Why use that pencil in the Mail Outfit
To "duplicate the order."
We'll readily obey.

Should you be good enough to read
That catalogue through again,
Digest those features that are solely ours,
And recall, the time to sell is March,
The time to order—Now.
Why you'll just get in line,
And be ready for the hum,
For it's a-coming,
That is, for those who have "Caloric."

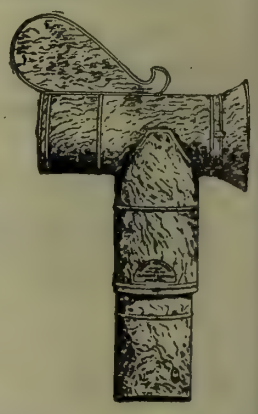
FIX UP YOUR CHIMNEYS

Even the best stove or furnace will be unsatisfactory if the chimney does not draw well. But the

"Zephyr Ventilator"

will give a good draft to any chimney. It will even allow the burning of soft coal in the stove, with good results.

We want you to sell the "Zephyr Ventilator" in your town. There is money in it, and the satisfaction that it gives will bring you new customers. **The "Zephyr"** cannot be excelled for ventilating the rooms of **Clubs, Steam Laundries,** etc. **The "Zephyr" makes high chimneys unnecessary.**



Lachine, June 5, 1903.

The J. W. Harris Co., Limited, Montreal.

Dear Sirs,—Your system of ventilation installed in our Convent has given us absolute satisfaction.

Yours respectfully,

Sister Marie Pacifique, Gen. Eco.
Sisters of Ste. Anne.

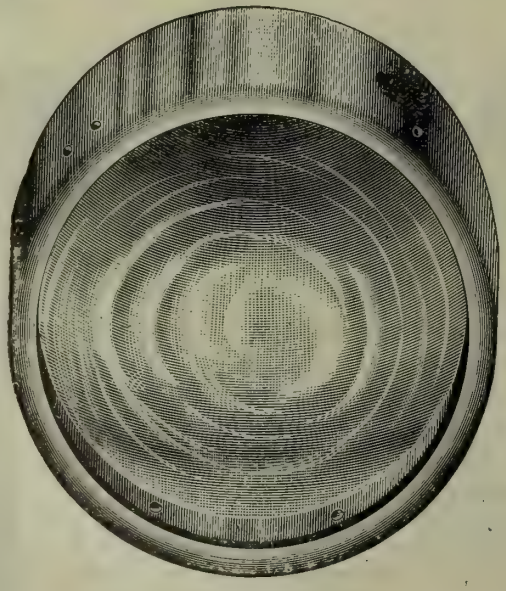
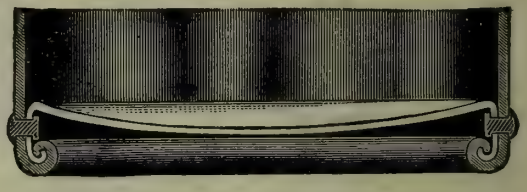
KEMP'S MILK CAN TRIMMINGS



COMPLETE SETS

Comprising one broad hoop roll-rim bottom, concave pattern; body hoop 6 inches wide, 20 gauge; top hoop 4 inches wide, 14 gauge; one cover; one pair malleable side handles one pair steel top handles. If wanted with malleable top handles, 7 cents per set extra list.



The roll rim has no sharp turns. Therefore the grain of the metal is not broken and having a broad wearing surface on the bottom it cannot damage floors. Ample space is left between the bottom and the hoop for the insertion of the body of the can. It is the neatest and strongest in appearance, and is supplied with concave bottoms. By examining the cut, anyone can readily see that this style of construction makes it the strongest bottom ever produced. They do not cost more than inferior bottoms. If you want to keep ahead of your competitors, use Kemp's Roll-Rim Milk Can Bottoms.

Canadian Transportation Development

By G. W. Stephens, Chairman Montreal Harbor Board, in the Busy Man's Magazine—Reproduced by Request.

Transportation has been defined as the "keys with which wise statesmen open the doors of national prosperity." There can be no subject, therefore, which should engage the attention of the Canadian people equal in importance to that of lessening the cost of transporting the products of the Western plains to tide water and the Eastern manufactured products to the homes of the Western consumer. It is equally true that upon the efficiency of our country's transportation facilities depends the future integrity of our Dominion, the comfort, wealth and power of our people.

Canadian transportation began when Jacques Cartier turned the prow of his little bark into the St. Lawrence and christened it after the saint of that name upon whose birthday he entered its waters, and the pages of its early history are filled with the heroic struggle of brave men who had the courage of their convictions and carried the visions of their imagination to a practical conclusion. The names of Cunard, Howe, Young and Allan are mile-stones along the pathway of its early development, in the same big way as Mount Stephen, Van Horne, Shaughnessy, Hays, Mackenzie and Mann are to-day in its later expansion. By the imaginative genius of such men and their pertinacity the outermost corners of our Dominion are made accessible, and the farthest off inhabitant of the plains becomes the neighbor of him who lives within the sound of the ocean.

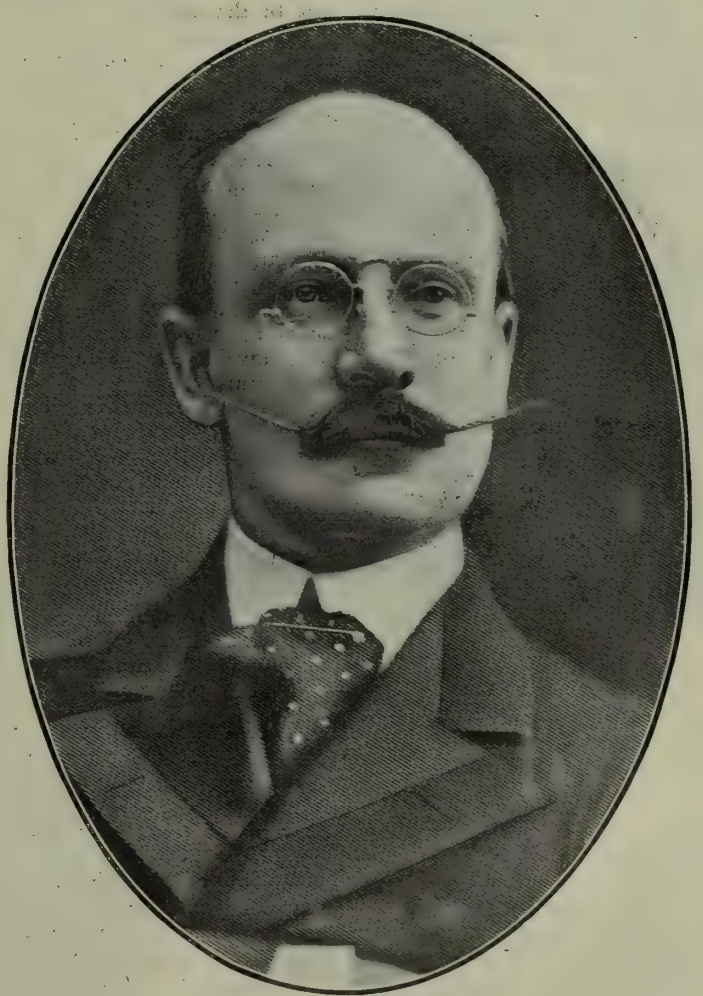
Before considering the actual conditions surrounding this problem to-day let me ask you to look at the primitive starting point from which these same conditions have been evolved. For that purpose let us compare for a moment the position occupied by Canada at the opening of the 20th century with that of our great neighbor at the opening of the 19th.

In the year 1800 the population of the United States amounted to 5,300,000 people, grouped together as a fringe along the shores of the Atlantic Ocean; behind them to the westward an undiscovered waste of wilderness and plain, not a single mile of railroad, not a single mile of canal development, no roads to speak of, no wealth, but the indomitable courage, perseverance and faith of her people; and upon this courage and confidence has been built up in 100 years a nation numbering 90,000,000 people possessing 217,000 miles of railroad, and a country extending from the Atlantic to the Pacific.

The cause of such wonderful progress must be sought in the early, wise and persistent development of her means of communication and transport. And while the 19th century yielded to the United States a marvelous growth in her interior transportation facilities, it is interesting to note that in 1860 she carried 66 per cent. of her export and import trade in her own ships, in 1906 she only carried 12 per cent.

Canada, on the other hand, starts the 20th century with 6,000,000 people, not huddled together on her Atlantic Seaboard, but stretching a continuous line of prosperous provinces from sea to sea; her continent spanned by the steel ribbons of three great railway systems; her natural waterways linked together by a canal system which has no rival; an annual trade development of $645,000,000; $680,000,000 of the people's savings in the bank, and is doing a business with 6 000,000 people at the beginning of the 20th century that was not equaled by our great neighbor to the south of us until her population had reached the figure of 26,000,000.

Added to all this, Canada, as the occupant of the northern half of this continent, possesses the shortest water route between the continents of Europe and America and America and Asia, thereby inheriting a natural strategic position which, if supplemented by energetic measures of transportation development within, will place her in an unassailable position for the command of a large portion of the international trade between the Mother Country and the East.



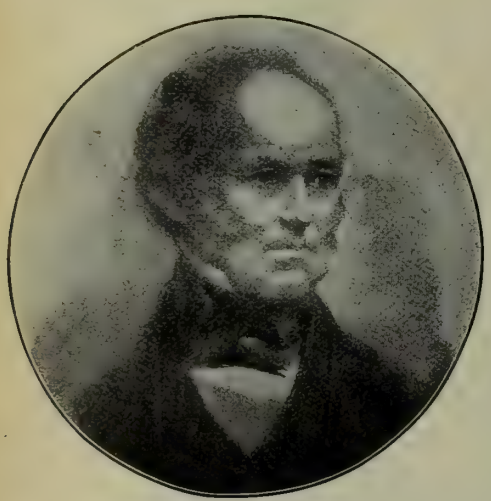
GEORGE W. STEPHENS.
Chairman of the Montreal Harbor Board.

This means a business connection with a market containing 450,000,000 people in China alone, 300,000,000 in India and 40,000,000 more in Japan. If we can become the carriers for a portion of this great international trade, if we can offer transportation inducements for the capture of our share of this business, then every ton of through freight handled over Canadian rails and by Canadian

waterways will reduce the cost of transporting the grain products of the West and the manufactured products of the East, and will bring into closer touch the growing population of this country in all its parts.

In this connection one must not forget that from the little sea-girt islands in the North Sea which we call the Motherland, over 3,000 miles of the Atlantic, across this Canada of ours, over 3,000 miles more, and again for 6,000 miles over the peaceful waters of the Pacific, the thin red line of transportation ploughing the waters of two oceans, traversing the fertile plains of a continent, over this continuous and shortest trade route float the folds of our country's flag. The greatness of our Motherland is founded on her command of the water-borne trade of the world. If Canada is to become likewise great she, too, must not neglect the development of her transportation.

Taking a map of the North American continent, one finds three natural outlet channels for the trade of the great Northwest, the Mississippi River, the St.



SAMUEL CUNARD,

One of the Founders of the Cunard Steamship Line in 1840. He was a Resident of Halifax.

Lawrence River and the Hudson Bay. The Mississippi is navigable from the Falls of St. Anthony to the Gulf of Mexico for more than 2,000 miles. The great chain of lakes connecting the Gulf and River of St. Lawrence give a continuous navigation of 2,500 miles to the heart of a great continent. Hudson Bay will be one day tapped and for a portion of the year at least afford auxiliary means of transport for grain cargoes out of the West. Of these three natural means of exit, the Dominion of Canada controls two, and by supplementing her natural inheritance by the building of the Georgian Bay canal she will place herself in the proud possession of a water route that will not only induce the trade of her own great West to follow its course, but will attract to it a very large portion of the trade of the Western States.

The question of Canadian transportation has been divided as follows by the Transportation Commission, whose valuable report ought to be made known to every Canadian interested in the country's progress:

1. From place of production to Canadian sea ports.
2. From place of production to Western ports of Lake Superior.
3. From Western ports of Lake Superior to Canadian sea ports.
4. From Canadian sea ports to Europe, and the reverse in each case.

All this of necessity involves the consideration of storage requirements of lake, river and ocean ports.

The harbor facilities of inland lakes, rivers and ocean terminals.

The conditions with regard to the navigation of the St. Lawrence route and the provision of a well-equipped terminal for use during the winter months when Montreal has no direct water access to the sea.

This question further involves the consideration of the forces operating against an all-Canadian transportation plan:

1. Competition by U.S. railways.
2. Competition by U.S. vessels from Lake Superior ports.
3. Diversion of Canadian product through the Eastern outlets of Boston, Portland, etc.

The subject is too vast to here consider in its entirety. An idea of its importance may, however, be realized if we study briefly transportation as it affects grain.

Of what, therefore, does this grain trade consist?

What are its possibilities of growth?

What equipment do we Canadians possess to handle it?

When we speak of the grain areas of Western Canada we mean—

	Acres.
Manitoba, containing	27,000,000
Saskatchewan, containing ..	52,000 000
Assiniboia, containing	50,000,000
Alberta, containing	42,000,000

or a total area suitable for cultivation of wheat of 171,000,000 acres.

Should only one quarter of this area be put under cultivation at the average yield of the past three years, this would give 800,000,000 bushels.

Out of the 171,000,000 acres, in the year 1900 only two and a half million acres were under cultivation.

In 1906 this had grown to six millions.

In the year 1900 the yield was thirty-three and a half millions.

In 1906 the yield was one hundred millions.

This grain was taken care of in 1900 in 533 elevators distributed at convenient points west of Lake Superior, with a combined capacity of 18,000,000 bushels.

In 1906 the number had increased to 1.200 elevators with a capacity of 50,-000.000 bushels.

The railway mileage from the base of the Rocky Mountains to the Red River, covering this wheat area, was.

In 1901	3,369
In 1905	5,620

The wheat acreage increased in five years from two and a half to six million acres.

The wheat grown from thirty-three and a half to one hundred million bushels and the mileage from 3,300 to 5,600 miles.

Now as the whole of this grain, which is shipped eastward, is tributary to the Canadian Pacific, the Canadian Northern, Grand Trunk and Grand Trunk Pacific Railways, carried to Port Arthur and Fort William, from thence to the sea, it is of the most vital import that a continuity of efficient transportation facilities shall prevail from the West to the sea on Canadian soil.

From Winnipeg to the commencement of water transportation at Port Arthur and Fort William is 427 miles. The two existing railways will be double-tracked and the Grand Trunk Pacific will add

SIR HUGH ALLAN,

The Founder of the Great Steamship Line Which Bears His Name.

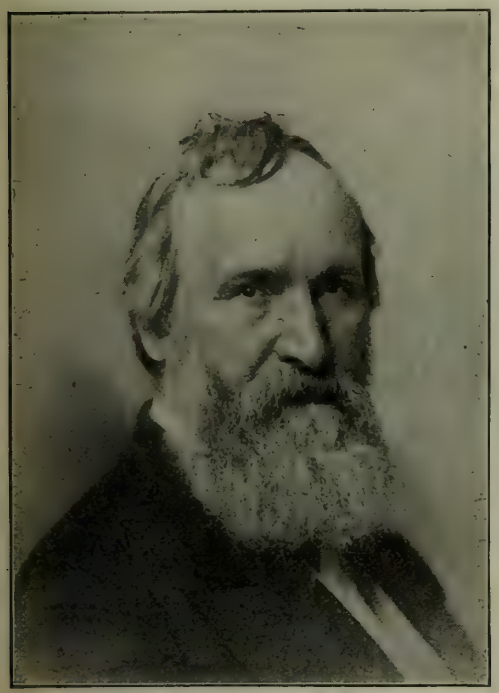
another available route. and yet with a continuous growth of population and a continuous building of railways, it seems hardly possible to build fast enough. It is a race between the ingenuity of man and the fertility of the soil.

On arrival at Port Arthur and Fort William the grain is stored in huge elevators which now have a capacity of twenty millions.

The corresponding lake ports on the United States side are Duluth, Superior and Chicago, upon whose harbors the United States Government have spent already ten millions.

As an example of the colossal growth of Lake Superior tonnage, the value of craft in this trade in 1887 amounted to two millions, while in 1904 it amounted to seventy millions.

When the grain is elevated at the western end of Lake Superior it awaits shipment by boat from there to the Georgian Bay ports of Depot Harbor, Victoria, Midland, Port Colborne, Buffalo or Oswego, where it is again discharged into huge elevators and then



HON. JOHN YOUNG,
One of the Pioneers of Transportation in Canada.

shipped to the sea by rail or boats as the case may be.

	American Water Route. Buffalo, Erie Canal, Albany, Hudson River to New York.	Canadian Water Route. Port Colborne, Welland Canal, Lake Ontario to Montreal.	In favor of the Canadian Water Route.

Total	32½

*Building.

From the Georgian Bay ports westward three railways run to the sea, and already 160 out of the 190 miles of the Trent Valley Canal system are completed, joining the Georgian Bay with Lake Ontario.

This gives to Canada the following

L. E. GEOFFRION,
A Member of the Montreal Harbor Board.

Canadian transhipping points east of the Great Lakes are:

choice of routes from Fort William to the sea, within her own territory.

1. The all-water route, via the Great Lakes, Welland Canal and the St. Lawrence River to Montreal.

C. C. BALLANTYNE,
A Member of the Montreal Harbor Board.

2. All-water route, via Georgian Bay, Trent Valley and the St. Lawrence River to the sea.

3. Water and rail, via the Georgian Bay ports, Grand Trunk and Canadian Pacific Railways to Montreal.

A comparison between the chief water route from the Great Lakes to New York with the Canadian water route from the Great Lakes to Montreal furnishes interesting matter for consideration.

The advantages of the Canadian water route over the American water route may be stated to be as follows:

1. That the St. Lawrence water route from the Great Lakes to Montreal is shorter than the American water route from the Great Lakes to New York by 110 miles.

2. That the number of miles of slow speed canal navigation by way of the Canadian route as compared with the American route is less by 242 miles.

3. That the Canadian water route furnishes more draft than the American by 8 feet.

4. That a boat using the Canadian water route can carry in cargo more than a boat using the American water route each trip, 72,000 bushels.

5. That the time consumed each trip by the Canadian route is less than that by the American route by 40 hours.

6. That the length of open navigation is identical in both cases.

7. That it takes a tow of ten boats on the American route to carry what may be carried by the Canadian route in one.

8. That one boat by the Canadian water route can carry more bushels of grain per season than can be carried by one on the American route by 3,544,000 bushels.

Yet notwithstanding these overwhelming advantages in favor of the Canadian route, the American railways carry through Buffalo the business that ought to go through the Canadian canals, and they are able to do this only because no therefore becomes a question at the present moment for the Canadian water route to join hands with Canadian railways to bring this business into its natural channel.

Taxpayers of the State of New York have decided to spend $110,000,000 to enlarge the Erie Canal to a depth of 12 feet. By so doing they propose to reduce the cost of carrying a bushel of wheat from Buffalo to New York to three-fourths of a cent. This would require the railways to reduce their price for the rail haul from Buffalo to New York from four cents to three-fourths of a cent, which is not thought a possibility by transportation authorities.

But the point I desire to make in connection with these figures is this: If our American competitors deem it worth while to spend $110,000,000 to get a waterway of 12 feet deep from Buffalo to the Hudson River, is it not about time that Canadians awakened to the fact that without the expenditure of another dollar on canals they are the owners to-day of a through water route of 14 feet draught, and could, if they supply the terminals and the carrying power, be in an even better competitive position than the United States will be after it has spent the proposed $110,000,000 on its Erie Canal.

Investigation into the comparative cost of carrying a ton of freight a mile by rail and by water by the highest authorities gives the following result:

A 6,500 gross ton freighter, costing $280,000 on a 1,000-mile trip, will carry her maximum cargo at a cost not exceeding 0.6 of a cent per ton per mile. This is less than 1-10 of the average freight rate per ton per mile that is earned by the railways on this continent. The cheapness of the carrying power of water as compared with rail will be made more clear by the fact that in large freight vessels the consumption of coal is five pounds per 100 ton miles of freight carried, whereas the consumption of coal on railways is 19 pounds per 100 ton miles.

The problem of cheapening the cost of handling the nation's business leads the student of transportation into figures the magnitude of which becomes almost staggering. The Canadian railways at the present moment are handling annually 58,000,000 tons of freight and 28,000,000 passengers. If you can reduce the cost two cents per ton you make a saving of $1,160,000 in the transportation charges on your business.

It is a curious fact, vouched for by a high railway authority, that the average daily work of a freight car in Canada to-day ranges between 29 and 33 miles, just a little over a mile an hour,

A View of the Completed King Edward Pier, Montreal.

A View of the Completed Alexandra Pier, Montreal.

adequate terminal facilities have been supplied in Canada to take care of this business. When these facilities are provided Canada will control the grain export business of North America.

The railways, however, from Buffalo to New York and Boston have so developed their carrying capacity and so reduced periodically their freight rates as to practically kill the Erie Canal as the carrying medium of export grain. It

This presents a very interesting phase of the transportation question, and shows that the railways obtain a very small proportion of the efficiency out of the cars at their disposal. What is the use of perfecting roadbeds, reducing grades, laying 80-pound rails, building huge Mogul engines, and strengthening bridges in order to increase the length of trains if inadequate facilities are provided at the terminals for the quick despatch of cars differently routed to their proper destination?

And here is where the problem of cheapening transportation is to be solved by the development on broad and comprehensive lines of our sea ports at which our rail and water ways converge. In this connection I may be pardoned for referring to a national development with which I have been personally associated for the past year, during which time it has been my privilege to stand at the gateway of Canada's commerce and watch the ebb and flow of that great volume of trade which leaves our shores in the shape of exports and the immense cargoes for distribution throughout this country. There is at the present moment going on in the Port of Montreal

A View of the Completed Jacques Cartier Pier, Montreal.

a development to take care of the import and the export trade of Canada, into which is being put $4,500,000, and she is getting for that expenditure 14 ocean berths and 14 double-deck steel concrete freight sheds, with a storage area of 1,500,000 square feet, and a working capacity of 150,000 tons of freight per week. It becomes a question therefore of considerable moment whether this expenditure is a wise one, and whether when completed the Canadian people will possess in their national port facilities an accommodation that will enable them to hold their own with the rival ports of this continent. Looking around for a comparison, we find that New York is paying $29,000,000 in the year of 1907 for an improvement scheme almost identical with our own. For that $29,000,000 New York builds eight piers and places upon them eight double-deck steel concrete sheds, having an area of 120,000 square feet less than those now being erected in Montreal. Montreal's development will place alongside of every shed two railway tracks, whereas the New York development is inaccessible to railways, and cars have to be lightered on barges into the ship and vice versa. This means that Canada is getting a port development for four and a half millions that New York has got to spend twenty-nine millions to obtain, and by having the additional advantage of direct inter-communication between the railways, sheds and ships it has been possible during the past season to effect a very considerable saving in the handling charges of freight through the Port of Montreal.

There have been handled by the Traffic Department of the Harbor Commission during the last season 1,500,000 tons of freight, carried in 75,000 cars, 400,000 tons of this freight were handled direct between the car, shed and ships, or vice versa. On this 400,000 tons of freight there has been an estimated saving of 50 per cent. or $80,000 in the handling charges alone. In other words, this means that the Port of Montreal has been able during the past season to handle 400,000 tons of freight for what it used to cost to handle 200,000 tons; and as almost the whole of this saving has been effected on through freight destined to all parts of Canada and all parts of the world, it is a matter of gratification that in the near future Canadians may possess the cheapest, shortest and safest trade avenue on this continent. The true national significance of the Port of Montreal, and the interest that every Canadian citizen should have in its expansion and development is evidenced by the following phase of the annual business.

Canadians possess the only clear water route from the Great Lakes to the sea on this continent which permits vessels drawing 14 feet to carry their cargoes to and from the Port of Montreal. Every railroad has direct communication with the water front of this port, which is owned and controlled by the people, not a foot of the fore shore of the Harbor of Montreal in its entire extent of ten miles of frontage being privately owned thus making possible the only economic harbor development upon this continent under like conditions.

This possession enormously increases the value of the Port of Montreal as a natural asset, and with proper terminal development and proper use of the waterways already in existence the Port of Montreal will afford:

To the growers of grain in the great Northwest,

To the fruit and farm products of the Provinces of Ontario and Quebec,

To the lumber interests of British Columbia and New Brunswick,

To the coal and iron interests of Nova Scotia and Cape Breton,

To the importing and exporting merchants of the entire country,

To the farmers producing cheese and butter,

In short, to every Canadian citizen doing business throughout the country the cheapest, safest and quickest delivery and receiving point on this continent.

The Port of Montreal takes cares of the imports of the iron manufacturer, now amounting to ten and a quarter millions a year.

Of the woollen manufacturer, who imports upwards of seven millions a year.

Of the sugar merchants, importing six millions a year.

Of the cotton manufacturers, importing three and a half.

Of the users of flax, hemp and jute, who import one and a quarter million.

Of the grain plains of the Great West, the grazing lands of Ontario and Quebec, which exported through the Port of Montreal in 1906, forty million dollars worth of animals and their products.

Cheese and butter coming from Quebec and Ontario, eighteen millions more.

Manufactured goods for South Africa Australia and the West Indies, four millions more.

The forest, fisheries and mines, seven millions more.

And so it becomes truly of broad national interest to all Canadians no matter what be their occupation, or where they may live, that somewhere in Canada there should be proper terminal facilities to handle Canadian business.

Montreal happens to be at the point where the farthest inland ocean navigation on this continent meets the deepest artificial waterway, connecting it with 2,500 miles of water navigation into the heart of this great continent. For that reason during seven months in the year

the cheapest, safest and quickest trade route for the large export and import business of this country ought naturally to gravitate toward Montreal, and it is a national duty that the Port of Montreal should be developed on broad and comprehensive national principles. The plan of this development on such a comprehensive scale should be given the best expert attention in all its details that money, time and experience can afford. In thus laying out a definite and complete plan covering development work for the next 25 years and carrying it on in sections, when the whole is complete there will be harmony in all its parts and a development that will enable Canadians to handle their own business efficiently and economically, and compete for the business of the Western States on a basis that will produce satisfactory results.

Alongside of the transportation ques-

LORD MOUNT STEPHEN,

Whose Unfaltering Faith and Iron Will Resulted in the First Band of Steel Crossing Canada.

tion and inseparable from it is the question of the growth of our population. The dream of 100 millions of people in this country is not so far off as might be supposed at first sight.

Last year's crop of newcomers from all sources, on reliable authority, amounted to 400,000 people. Add 100,000 as the natural increase to our own population and you have an annual increase in 1907 of half a million people. If this yearly increase is not exceeded and we go on increasing at the rate of half a million a year, in 25 years the population of this country would be 18 000,000; and if at the end of 25 years all outside immigration should cease, we will then be adding to our population at the rate of two millions a year, which in 25 years more, or 50 years from 1907, would give to this country (Canada) a population of 60,000,000 people.

This is the great future that Canada must now lay the foundation for, that Canada must build railways, canals and ocean terminals to take care of.

The safety of this great future must be guarded by the aggregate individual integrity of her citizens. This wonderful panorama of development is almost unfolding itself without our realizing what is going on, and as the lines of our transportation are extending themselves to the outermost corners of this great Dominion, unconsciously is being established a bond of union under the folds of a common flag which has been the symbol of equal rights, justice and freedom to the least of her citizens since the British Empire began. We may not speak the same tongue, nor worship at the same altar, yet as children of a common flag we are bound together by the thread of a common patriotism over whose strands—like the power of Niagara passing over wires to move in far distant places the wheels of mighty commerce—is passing a force of brotherhood, sympathy and power against which neither the voice of the demagogue nor the roar of hostile cannon can avail.

Hardware Trade Gossip.

Ontario.

M. B. Thorpe has sold his hardware business at Glen Allan.

D. Cinnamon, Lindsay, visited Toronto and London on Wednesday.

Harry Willford, dealer in stoves, tinware and furniture, has assigned.

J. A. Beatty & Co., Ridgetown, have sold their hardware business to W. H. Goodhue.

Wood, Vallance & Co., Hamilton, have been showing some fine window displays recently.

C. A. Fabien, refrigerator manufacturer, Montreal, was a visitor in Toronto on Tuesday.

John Dean, one time western manager of the Hamilton Powder Co., died at Kenora on Dec. 29.

Work has begun on the building to be erected by the Vokes Hardware Co. on Queen street east, Toronto.

H. C. Hunt, manager of the Brass and Steel Goods Co., Belleville, called on Toronto jobbers this week.

Clarence C. Skinner, superintendent of the Skinner Mfg. Co., Gananoque, was married on January 6th, to Miss Ethel G. Birmingham.

The Junction Hardware Co., West Toronto, have been succeeded by R. G. Christie & Co., the Cutts interests retiring from the business.

Thos. G. Dexter, of H. S. Howland, Sons & Co., Toronto, is on a trip to Winnipeg and the west. "Tom" Williamson is acting as buyer in Mr. Dexter's absence.

J. B. Schnitzler, representing the Electric Meter and Stamping Co., New Hamburg, manufacturer of shelf, builders, carriage and trunk hardware, was in Toronto last week.

Chas. T. Klopper, at Sarnia, manager of the Standard Chain Co., has resigned and has returned to York, Pa. Wm. Davies has been appointed manager and has assumed his new duties.

Incorporation is being sought by the Port Elgin Trading Co., capitalized at $20,000 to take over the grocery and hardware business of Fred. Magee. Fred Magee, C. R. Oulton, B. F. Wells, C. B. Copp and T. J. Allen are interested.

Quebec.

J. McOuat, Lachute, Que., has been on a visit to Montreal.

J. Dibblee, of W. F. Dibblee & Son, Woodstock, N.B., has been visiting Montreal hardware circles.

G. C. Davis, Frothingham & Workman, Montreal, is on a shooting trip in the Laurentian mountains.

General sympathy will be extended by the trade to Alex Gibb, Montreal, who lost his wife recently after a short illness.

J. R. Kinghorn, Montreal Rolling Mills, has been nominated for a seat on the Council of the Montreal Board of Trade.

T. F. S. Jackson, Edmonton, was in Montreal this week. Mr. Jackson is starting a commission business in the western city.

A. W. Mann, is now in charge of the smelting works of the James Robertson Co., Toronto, in Montreal, taking the place of Mr. Broadhurst.

Ralph L. Sheinwald, President of the Standard Paint Co., New York, has been visiting the Montreal headquarters of the Standard Paint Co., Canada.

The eleventh annual report of the Montreal Builder's Exchange, presented at a recent meeting showed that while the past year had not been so favorable to the building trade as some of its predecessors the directors felt that the prospects for the year were of a bright nature. Believing that it would be of the greatest benefit to their increasing membership, the directors had decided to secure a whole flat in the new Eastern Townships Bank Building. The co-operation of the members was asked in bringing about a permanent exhibition of building materials. J. N. Arcand was elected president, and J. W. Hughes, vice-president.

Trade Announcements

Catalogues, booklets and other printed matter issued by manufacturers, jobbers, etc., for distribution to the retail trade will be reviewed in this department. Senders of catalogues, etc., for review should draw attention to new lines and retailers, when sending for samples, etc., should mention this paper to show that they are in the trade. Retailers sending for catalogues and other matter supplied by manufacturers or jobbers, should write on their regular printed letterhead to ensure receipt of same.

Brass and Steel Goods—A neat 16-page loose-leaf catalogue of cast brass and steel refrigerator, cabinet and general hardware, issued by Brass and Steel Goods, Limited, Belleville, is ready for distribution. The lines shown include pad-locks, key-locks, show case hardware, brass hinges, refrigerator catches, locks and fasteners, and trunk and suit case hardware. Retailers jobbers and hardware manufacturers will all find the catalogue a valuable addition to their file.

Reorganize Lake Superior Corporation

British Capitalists Purchase the Securities of the Holding Company and Liabilities to Banks Are Liquidated—Additional Capital to be Brought in.

An important epoch has been reached in the affairs of the Lake Superior Corporation of Sault Ste. Marie. Ever since the Corporation was started it has had many difficulties to contend with. Some of these were of its own making. One of its chief difficulties at the start was the fact that like similar industries in new countries, its original cost was excessive. This was a serious handicap.

About five years ago a crisis was averted by the Government of the Province of Ontario guaranteeing a loan of two million dollars. Just about the same time there was also a complete reorganization of the corporation's executive officers, and a holding corporation, The Canadian Improvement Company, was formed to take care of the assets.

When the new executive took control it was found necessary to purchase some $2,500,000 worth of raw material while of funds available it had scarcely half a million dollars.

British Capitalists Invest.

Now the securities of the Lake Superior Corporation have been secured by a group of capitalists, chief of whom is Robert Fleming, of London and Edinburgh, a gentleman whose name stands high in the financial world. Associated with Mr. Fleming is F. S. Pearson, the engineer of London and New York, who will take a prominent part in the direction of the undertaking. He is already interested in the Canadian iron and steel industry, being a director of the Dominion Iron & Steel Co. and of the Dominion Coal Co.

The process of reorganization is not yet complete, not will it be until toward the end of the month. In the meantime the liquidating of the corporations liabilities has been accomplished. Hardware and Metal has been informed by one of the executive officers of the corporation that on Tuesday, January 12th, the last dollar owing the banks had been paid off. including loan guaranteed by the Ontario Government, $1,000,000 of which was paid off some time ago. Eighteen months ago its liability to the banks aggregated about $2,500,000.

The next move of President Warren and the directors is to secure additional capital to extend and improve the various plants of the corporation and to complete the construction of the Algoma and Hudson Bay Railway. Grading on this road is practically finished. Negotiations are now being carried on with a view to securing the necessary capital, and it is expected that by the end of the month the necessary money will have been secured and the process of reorganization completed.

The Officers of the company are: President, Chas. D. Warren; 1st Vice President, J. Tatnall Lea; 2nd Vice-President, Thomas J. Drummond; Treasurer and Secretary, Walter P. Faust.

The capital stock authorized and outstanding is $40,000,000; first mortgage bonds authorized, $10,000,000; outstanding about $9,000,000; income bonds authorized and outstanding $3,000,000.

Thirteen Subsidiary Companies.

The subsidiary companies owned and operated by the Lake Superior Company number thirteen. They are: Algoma Central & Hudson Bay Railway Company, Manitoulin & North Shore Railway Company, Algoma Commercial Company, Limited, Algoma Iron Works, British-America Express Company, Algoma Steel Company, Limited, Lake Superior Power Company, International Transit Company, Trans-St. Mary's Traction Company, Tagoma Water & Light Company, Sault Ste. Marie Pulp & Paper Company, Michigan Lake Superior Power Company, Lake Superior Iron & Steel Company, Limited. All of these except the nickel and pulp plants are at present in operation.

According to the report of the directors, presented at the annual meeting in October, 1908, the operations of the various subsidiary companies during the preceding fiscal year showed a net surplus of $1,072,000, an increase of $214,879 over the previous year, and this in spite of the fact that the steel plant had been closed down for a considerable time. No interest, however, was paid on the income bonds, as the earnings of the corporation had to be retained, the financial panic of 1907 making it unsafe for the subsidiary companies to depend on outside sources for necessary working capital.

Two Blast Furnaces.

The Algoma Steel Co., one of the subsidiary concerns of the corporation operates two blast furnaces, each of a capacity of 250 tons of pig iron per day. Since the steel works were established these furnaces have been unequal to the demands made upon them and an increase in the capacity of these furnaces to 500 tons per day is necessary for their own requirements.

The Bessemer plant consists of two convertors of four tons capacity each. The rail mill which is the first started in Canada consists of three stands of rolls. The plant is laid out with a view to handling rails from 30 to 60 feet in length and of eights up to 100 lbs. per yard.

In addition to the Bessemer convertors there are two basic open-hearth furnaces each of a total capacity of 400 tons. The capacity of the blooming and rail mill is 600 tons per day.

The output of pig iron by the Algoma Steel Co. during the last three years was: 1905, 66,235 tons; 1906, 130,902 tons; 1907, 135,852 tons. The output of standard steel rails was: 1905, 98,822 tons: 1906, 159,740 tons; 1907, 142,958 tons.

The open hearth furnaces started by the Lake Superior Iron & Steel Co. last year produced 25,321 tons of open hearth rails.

The bounties earned by the iron and steel plants of the Lake Superior Corporation during 1906 and 1907 totaled $833,483, being $272,076 for pig iron and $611,407 for steel ingots.

JOY RANGE PLANT SOLD.

The Canadian Heating & Ventilating Co., Owen Sound, have purchased the plant and business of the Joy Manufacturing Co., Toronto. The Joy Co., which has been making Malleable Ranges for about four years, has been taken over as a going concern, and the plant will be moved to Owen Sound and the business amalgamated with the Canadian Heating & Ventilating Co.

J. R. Joy, who has been superintendent of the Toronto plant will move to Owen Sound and continue to supervise the manufacture of the Joy Malleable Ranges. H. N. Joy, Manager of the Company, is retiring and will devote his activities to other interests.

The reasons prompting the sale are the better facilities for marketing the goods enjoyed by the Owen Sound Co. they having branches established at Toronto, Winnipeg, Vancouver and Montreal. They will, therefore, be able to place Joy Malleable Ranges on the market with a better connection and with considerable saving in freight and travelling expenses, that were necessary in operating the plant in Toronto.

There will also be an additional advantage in being able to manufacture the many articles in the foundry at Owen Sound which had to be purchased by the Company operating the Toronto plant.

Many difficulties were encountered in building up the Joy Malleable business as it was found difficult to secure satisfactory malleable castings from Canadian malleable foundries. This has been overcome, however, and the Canadian Heating & Ventilating Co. ought to be in a position to put a high-class malleable range on the market, and compete successfully with the high-priced malleable ranges imported into Western Canada from the United States.

COBOURG'S NEW INDUSTRY.

The Provincial Steel Co. which was chartered a fortnight ago with headquarters at Cobourg will take up the re-rolling of steel rails, which have become worn and run over at the edges, after having been used on the main lines where traffic is heavy. After being re-rolled at Cobourg the rails will be used for sidings where a slightly lighter rail can be used than on the main line. It is claimed that owing to the establishment of the G.T.R. Ferry, operating throughout the year, coal can be laid down at 80c per ton cheaper than any other point in Ontario.

Hardwaremen Bigger Than Their Business

An Interesting Story of How a Hardware Merchant is Helping to Improve the Breeding of Horses and so Increase the Income and Spending Capacity of the Farmers in His District.

In the economy of things he who can make two blades of grass grow where only one formerly flourished has been hailed as a true benefactor and reformer. In a similar sense he who by personal effort and campaign of education adds to the individual and collective wealth of the community in which he resides is worthy of all honor. The man, who enhances the prosperity of those around him and points the way to greater productiveness plays an important part in the life of the individual and the State.

There are in every centre a few men who are bigger and broader than their business. They find time to devote attention to matters tending to add to the wealth and contentment of the town or city in which they live. It may be in the municipal arena, the cause of charity, the promotion of new industries, the building of houses, beautifying the locality, improving the highways, looking after educational and moral interests or organizing a live, progressive Board of Trade. In countless ways they serve their fellows with faithfulness and zeal, and still find time to conduct their own affairs ably and well. No man can render greater service to those around him than he who gives his time and talent to the upbuilding of a cause that adds to the thriftiness and earning power of the farmer and the output of the farm.

Among the business men of Ontario who are taking the initiative along this line, is William Black, hardware merchant of Durham, Grey County, Ontario. Solely through his influence and untiring advocacy the town in which he resides, now boasts a monthly horse fair which has aroused much enthusiasm in the community and has started on a scale that ensures the permanent success of this institution. The first fair was held last month, and the next will take place on January 19. The fair, it may be explained, is for the purpose of buying and selling horses and one stipulation on the part of the management is that all animals offered must be in good condition. At these monthly gatherings the streets are thronged with farmers and the merchants reap a harvest from the large volume of trade. Buyers are present from Montreal, Toronto, Brampton, Guelph, Listowel, Harriston and other towns. A most successful beginning has been made and purchasers will soon begin to know one another better and the class of horses that are in demand.

At the December fair about 250 horses were offered and a number of profitable sales made. The horse market is unusually quiet at present, and some of the animals were not in good condition, but, with succeeding fairs, the promoters are confident there will be a decided improvement. A few of the animals were too young and others were not in the best shape. The most useful and popular horse there was the kind which Mr. Black has been encouraging the farmers to breed. It was a carriage gelding, weighing about 1,200 pounds, and sold for $225 to a merchant tailor of Durham. The animals ranged in weight from 900 to 1,600 pounds.

For years the farmers of Grey County in the vicinity of Durham have been breeding unsuitable and unsatisfactory animals for the market and realizing low prices. Mr. Black saw that they were not proceeding along right lines, and he has been urging his friends and neighbors to raise a class of horse that would command the highest price, a

WM. BLACK, DURHAM.

kind that would find a ready sale and bring from $50 to $100 more than the owners have been receiving. With the object of giving practical application to his ideas and affording the farmers an opportunity to add to their income last year he and another resident bought a fine, well bred stallion and placed him on the road and the average four-year-old colt from this horse, so the farmers freely acknowledge, is worth one-third more than the foals which have been reared in the past.

Interviewed on the result of his work and how the farmers were taking to the plan of breeding for more profitable foals. Mr. Black, who has taken an interest in horses in his section for several years, said: "Last season was the first we owned the horse. We have bred him to 124 mares, and I think about 90 will prove in foal. For the service fee we charge $10. Our horse produces different kinds of stock, according to the kind of mare he is bred to. From one style of mare he will produce the finest carriage horse that can be found. He will also produce a hack horse, a driving horse suitable for a doctor or a clergyman, a delivery horse, a military horse and the most serviceable farm horse that was ever needed on any farm. I am glad to say that the farmers fully appreciate what I am doing in connection with breeding, and in feeding their horses and preparing them for market, which precaution they were very dilatory about previously. It is impossible to sum up the added wealth in the pockets of the residents in this section, since I began this work. I am well satisfied, however, with the progress that the farmers are making in the breeding line. When I began taking an interest in horses here six years ago, the farmers were not raising suitable animals—at least not according to my taste and judgment, and I was obliged to procure a stallion, not as a money-making venture, but in order to give expression to the views I held on the important industry of proper breeding and to show the farmers how to produce the right kind of equine flesh—the kind that would readily sell and command the highest figure. I am glad to be able to say that my campaign is having a good general effect throughout this section. This district will, I have no doubt, soon be unsurpassed as one of the best horse raising communities in the country."

Mr. Black also takes a deep interest in municipal politics. He ran for Mayor of Durham at the last election, and, in a spirited contest, was defeated by only a few votes. It may be mentioned that he is secretary as well as founder of the Durham horse fair, and conducts a most successful and up-to-date hardware business, handling shelf and heavy hardware, builders' supplies, graniteware, silverware, etc.

A careful estimate of the added wealth to the community tributary to Durham as a result of the superior and more serviceable class of horses now being raised is $10,000, which means that the breeders have that much more money to spend every year. This sum freely circulating in a town among the merchants, and the farmers brings more general prosperity and larger returns as every movement tending to increase the amount of available cash, creates more business and results indirectly in raising the value of factories, stores, houses, land, rents and other things which make for "good times"

William Alexander Bell, aged 45, for the past ten years Toronto traveller for the Imperial Varnish & Color Co., died on Sunday, after an illness of many months. For a number of years he was employed in the City Clerk's office, and later went to the Imperial Varnish and Color Company.

Develop the Sporting Goods Department

With the breathing time that the early part of the year gives the retail merchant, a fine opportunity is afforded of studying out ways and means of improving the sporting department. This part of the hardware trade is a very important one. Not only does it compare favorably with other lines as regards profits, but it has the great advantage of being less affected by "hard times." Trade may be bad and money scarce, but the sportsman will not be hindered from pursuing his recreation under the best possible conditions, and that means by equipping himself with the best article. Be the times hard or soft, the sporting department is one that brings an unfailing source of trade to the hardwaremen. The dealer, therefore, should till this profitable ground to the uttermost, and it is now that he can best think out the means whereby this tilling can be rendered more thorough.

Examine the Stock.

In the first place the general inventory now going on gives him the opportunity of thoroughly examining the stock, and of judging the lines that sold the best during 1908. It may be that a certain type of fishing tackle was entirely sold out, while others were dead stock and now remain on his hands. He will therefore resolve to concentrate his buying this year on the good sellers, and to clean off the old kind as soon as possible at bargain prices. And so on, if necessary, in the case of other lines. The merchant may also find that he had figured his prices too low on a certain class of goods, and that he had not reaped the most advantage from his trade. The remedy is easy. One of the greatest errors that the merchant has to guard against is the figuring of profits too low. He is apt to forget the extraneous circumstances that necessitate a higher percentage on some articles than on others, and that an article which sells over and over again can bear a lower profit than the one which sells less frequently. Again, in talking of profits, a man who gauges the requirements of his district with great foresight may make more profit at 30 per cent., than another at 50 per cent. He knows that there is a demand for a certain class of goods at a certain season. He orders so that his stock is ready for this demand. He does not wait until customers are in the store before he sends to the jobber. He is there with the goods and he sells out. The other man has to refuse orders because he has not the goods, and finishes his season with a heavy stock that has to be carried over or sacrificed. Especially will this be applicable in a year like the present when trade will open out early, and when the man who has the goods will reap the greatest benefit.

Push Developing Lines.

Bearing in mind the important facts which the past year has shown him the merchant can start on a much stronger campaign. Certain lines which were only taken up in a tenative way, may be on the advice of a traveller, proved a most excellent investment. He will therefore make a strong effort to push these lines this year, placing a much larger order with the jobber. For instance, the store may be situated on a main road largely frequented by automobilists. A few accessories necessary to automobiling, such as special tools, batteries, horns, etc., carried on trial may have sold wonderfully well, for accidents and mishaps occur to the best regulated car. The merchant, therefore, should resolve to extend his stock, especially if he has noticed a development of the traffic along the road, and what is equally important, he should make up his mind to advertise the goods. Carry a conspicuous sign or notice that automobile requisites can be had at the store.

Be Ready With the Goods.

A near-by lake or river may be developing in popularity as a fishing resort. Take this into account when ordering the fishing tackle. There may be some talk of forming a yachting or boating club in the district. The merchant should do his best to encourage this movement by personal help in its organization, or by other means, not forgetting the business end of securing the trade by being well prepared for it. In all such movement, whether it be in baseball, tennis, or golf, the merchant should be ready with the goods. That is the great and essential point.

Location in the Store.

Then again the merchant should ask himself the question: "Have I given my sporting department a good selling position in the store. Have I so displayed my stock that customers are attracted." A great deal depends upon the location of a department. The goods that are hidden away in a dark portion of the store are under a serious disadvantage. Not only are they overlooked by a customer, but it is irritating to have to examine a gun, rod, or racquet, as the case may be, in a light that is not good, thus necessitating an adjournment to the front part of the store to view the article properly. And a sportsman is very particular on this point. He wishes to examine the article thoroughly for on its qualities depends the best enjoyment of his sport.

Displaying the Goods.

Very much depends upon the interior display. If fishing tackle is attractively arranged, golf sticks neatly placed in stands, yachting or boating supplies well displayed, customers are at once interested. And it must not be forgotten that it is not so much the customer who enters the store to buy a specific sporting article who demands the strongest attention of the merchant so far as attraction is concerned, but the customer who enters in the first place to buy something else. And here lies the advantage of a good interior display.

Then we have the windows. Does the merchant consider that he devoted as much space as he might have done to his sporting displays. Does not the increasing growth of his sporting department demand more attention in the windows. These questions the dealer should at once answer. He must not forget that there can be no greater selling force than his window displays, and no better advertisement for the store generally. A sporting window at any time of the year is the most attractive window that a merchant can put in.

A Growing Demand.

Thus, going over his campaign for the coming season, the merchant can put himself in good shape. He may decide to advertise more freely, to carry larger stocks, to develop certain lines for which the peculiar location and propensities of his district have created or are about to create a demand to display his goods more frequently, and to identify himself more personally with the athletic spirit of the community. Whatever course he may decide to undertake, he may rest assured that the development of his department will be worth his while. The demand is an ever growing one, while the profits are not so cut as they are in other lines, and at the same time the opportunities for developing the trade are much greater and certainly more interesting. The growth of his sporting department can be made at the same time a source of profit and of pleasure to the hardwareman.

GIVE THE TRAVELER A HEARING.

"Yes sir, the man who refuses to see a traveler makes a mistake every time if he will look at the matter in a calm reflective light," said the manager of a large establishment to Hardware and Metal this week. "I believe he can get pointers, even if he is stocked up with goods and does not need anything, that will well repay him for the time taken up in conversation or in looking over samples.

A traveler called on me some weeks ago. I was pretty busy, so when he asked me how my supply of globes was I pointed to my stock and replied that I was stocked up to the neck. "Well," he added, "I would like to have you look at my samples." I hesitated but finally said that I would give him a few minutes.

In getting the prices I learned more about buying and the prevalent quotations than I had for months past. I found that he was twenty per cent. lower than what I had been paying even under the most favorable arrangement. "Are these your regular prices," I asked, and he assured me that they were. I knew that a glass combine had existed on the other side but I was not aware that his house had broken away from it. The representative added that the bottom would soon drop out of the whole affair and I found that he was right.

I firmly believe that goods well bought are half sold as I have found it true in my experience. Yes, sir, time spent with travelers often repays you in many ways and I always make it a point to give them a friendly reception no matter whether I am stocked up with goods or not," concluded the jobber.

The Toronto Bolt & Forging Company, Toronto, have issued a very large calendar about 20x36 inches, the figures being large and easily discerned. Above the date pad are fine views of the company's rolling mills and bolt works at Swansea. Requests for this calendar should be forwarded at once.

PUBLISHED EVERY SATURDAY.

WILL BE A BIG YEAR.

The expressions of opinion published in our January 9 issue as to trade prospects for the year are all marked with the utmost confidence in the future. There are no signs of doubt as to the trend of business; no lukewarm assertions that trade may be good if such and such a thing permits. But the positive declaration that trade will be good—a declaration based, not upon mere optimism itself, but upon tangible indications that are apparent to every business man who has bestowed thought upon the situation. And over and above all each manufacturer and each jobber is resolved to make his assertion good by exacting the largest share he can of the prosperity that he knows is within his reach. Thus we shall have wheels within wheels quickening upon each other, and all contributing to the great volume of business that will characterise the trading of 1909.

And the retail merchant can play his part, and a mighty part, too, in the great advance. He can encourage the consuming demand. He can by his window displays and by the completeness of his stock attract the purchaser into his store. He can, by permeating his store with a general cheerfulness of belief in the development of trade, encourage that trade. People economized all last year. They believed that the monetary conditions of the country necessitated that course, forgetting in their short-sightedness that they were fostering the very drawbacks which they so much regretted.

It is the merchant who can shake consumers out of the rut of economy. He can tickle their appetites and tempt them out of their fast. Let him show to his customers that he is confident of the trading prospects of his district, and confident of securing his share of it. His confidence will inspire confidence, and consumers relieved of the bogey of doubt, will purchase as they should have purchased last year. Following out this attitude the merchant will not order from hand-to-mouth, but will book ahead liberally as he did in former years, thus backing up and encouraging manufacturers and jobbers in the course they have decided upon.

There is no reason to doubt the future. In the first place, the year starts under much better conditions than did 1908. There have been many months of steady building up. Concerns which were severely shaken by the depression, because they had developed beyond their strength, are now back upon a firm basis. The magnificent harvest has enabled farmers to liquidate those heavy obligations that they had in cases incurred through land speculation and too great an eagerness to get rich quickly, while all of us have learned the lesson of moving progressively but steadily.

The whole country breathes vitality and strength. There is the consuming economy of a year to be added to the natural development of a country that is going ahead by leaps and bounds. Capital poured into the country last year and it will do so again this year, while railway construction will be developed more vigorously than ever. Thus from the Atlantic to the Pacific will there assuredly be a great development of trade. The constituents are here, the power is here, the energy is here. It must come, and it will come.

LINSEED OIL ADVANCES.

An advance of four cents in the price of linseed oil this week verifies Hardware and Metal's advice of a month ago that "the dealer who buys now for spring delivery is likely to be in a favorable position." At that time raw oil was quoted at 55 cents in Toronto and Montreal, a figure about as low as it could be expected to go under present conditions, this low figure being due to competition amongst the crushers.

In Hardware and Metal of December 12. editorial announcement was made of an agreement being made between the crushers, but a hitch arose and prices broke to the 55 cent level. Many firms took advantage of the opportunity to book their season's supply, but others, including some jobbers, waited too long, not expecting the crushers to get together again.

Hardware and Metal can now definitely announce the completion of the mutual agreement foreshadowed five weeks ago, all the Canadian crushers having reached an understanding. Jenkins & Hardy are secretaries of the new association, which is aimed to make the market more stable, the crushers setting the price for the jobbers and the latter getting their rebates on carload orders providing they maintain the prices.

The new price of 59 cents per gallon for raw, in quantities of from one to four barrels is within the fraction of a cent of the cost of English oil laid down on this market, including, of course, the duty of $1.25 per 100 pounds, equalling about 12 cents per gallon. The price of American oil, laid down here, including the duty of $1.65 per 100 lbs. (about 15 cents per gallon) would be about 64 or 65 cents per gallon. It will be seen, therefore, that the duty at present low prices of oil runs from 25 to 33 per cent.

Under the new arrangement prices will probably be steadier, they being governed, of course, by the import price of English oil. And now that the market is strengthening the demand should increase, as buying is always greatest on a rising or firm market.

TO BE LARGE CONVENTION.

Indications are that the convention of the Retail Hardwaremen of Ontario, at Hamilton next month, will be the greatest event in the history of the hardware trade in Canada. No previous convention has been attended by over 100 retailers, but reports received have forced the officers of the Ontario Retail Hardware and Stove Dealers Association, to revise their first estimate of 150 and figure on about 200 retailers registering at the convention. Even this estimate is considered low by many in close touch with the trade, Hamilton jobbers having made an estimate that 250 retailers will attend. In addition to this between 50 and 100 representatives of the jobbing and manufacturing houses will visit Hamilton during the convention.

The program this year is better and more elaborate than arranged for any previous convention. Some of the best known men in the trade in New York and Montreal have been invited to assist in the educational program being drawn up. Then there will be the ever popular "Question Box" discussion. And new features include the visiting of factories to see how hardware is manufactured and the exhibitions of samples

by manufacturers about 20 well known Canadian and United States firms having already engaged space for displays.

Altogether it looks as though the coming convention is going to be an event to be long remembered and Hardware and Metal urges every retailer to make an effort to visit Hamilton on Feb. 9, 10 and 11. If for nothing else it would be the occasion for a brief relaxation from business—and a few days spent in the congenial company of other hardwaremen out for a good time and open to give and receive information helpful in making their business more profitable.

If any retail hardwareman has a question regarding his business which he would like to have answered, let him attend the Hamilton convention, and either put it in the "Question box," or ask some retailer from another town. And if any one in the trade has doubts about the advantages of having such an organization as the Retail Hardware Association and hesitates to pay the small membership fee required let him attend the Hamilton convention and investigate. If he fails to receive his money's worth and returns home disatisfied the editor of Hardware and Metal will be very much surprised.

THE ANNUAL INVENTORY.

The first thing the successful hardware man will want to know each year is how he stands with his finances, what profit he made last year and what goods is he overstocked in. As soon as possible, therefore, after Christmas he should take stock. Some put off this important work until as late as February, while the majority choose January as the most convenient time. Still others, and some of the most successful retailers are following the jobbers in completing the work between Christmas and New Year's.

The inventory must be taken before the books can be properly balanced and the profit on the year's business shown. But even more important than knowing how last year stood is to know what to do in the year to come—and knowing, to begin early. Stock-taking will reveal what lines have been over-bought and the sooner the inventory is taken the earlier can an "after the holidays" sale begin. If a dealer attempts to conduct such a sale before taking stock he is more than likely to overlook some line which ought to be cleaned out but which he does not know is overstocked.

It costs money to carry stock over from season to season, while profits are most easily made in turning stock into cash as many times as possible during the year. It may be handy at times to have a supply of goods bought a generation ago but the departmental store method of getting rid of unsaleable goods and using the proceeds to secure a stock that will turn over quickly is the modern and most profitable business plan.

Each dealer must decide what is "dead stock." The writer knows a hardware man who would not consider iron pots and frying pans bought a decade ago as dead stock, and he knows others who would consider modern enameled ware dead if they couldn't turn the stock into cash twice a year. Conditions vary and no rule can be set down as infallible. But the point is that the retailer should take his inventory as near the beginning of the year as possible so that he can select the lines he wants to unload and then do his utmost to turn the dull season into a busy one by offering such inducements as will bring customers to the store and buy the lines which are tying up money which ought to be at work earning profits on up-to-date lines.

NEW TURPENTINE INDUSTRY.

An interesting development in the paint and oil industry of Canada is the incorporation this week of the Canadian Turpentine Limited, a company which has been organized for the purpose of manufacturing spirits of turpentine by the new process, also of fine tar, fine oil, and other products of Norway red pine. The head office is at Montreal, and the works are being erected at Barry's Bay, Ont., and will be in operation in about two months.

Repeated attempts have been made to inaugurate this industry, but this time it is understood to be on a solid basis, and likely to be a source of profit to the country, as there is abundant material available. The names of the provisional directors have not yet appeared, but they include Professor Donald, official analyst to the Dominion Government, and R. Munro, managing director of the Canada Paint Company, Montreal. The new process produces turpentine at a less cost than the old, and the quality is equally pure.

PAYS TO BUY EARLY.

Dealers should regard with attention the growing strength of the United States markets, and not leave their ordering so late as to stand a chance of being squeezed. Advances from time to time have indicated the advancing trend of prices across the border and this week we have to report an advance on box wood rules of from 7 to 15 per cent. on all lines, this making for instance No. 68 $1.15 per dozen. No doubt a contributory cause is the cost of production, wood becoming much dearer as time goes on, but still straws show which way the wind blows and the wind certainly seems to be blowing for higher markets generally. In any case, the dealer makes no mistake in ordering his goods early.

RAILWAY COMMISSION EARNS PRAISE.

After sitting for nearly a week in Montreal and Ottawa the Railway Commission swept away the new classifications and rates of the Canadian Express Companies, which have been in vogue since the beginning of the year, causing great complaint all the way round. The alterations were allowed, said Judge Mabee, under a misapprehension, and must be at once revoked, the old rates coming into operation again. Thus the mercantile community is relieved of the many changes in the new schedule, the majority of which appeared to provide simply for advances in rates. Judge Mabee, in his decision, dealt especially with the unfairness of the charges on returned empties, and the unreasonableness of the weight and measurement rule.

A strong point in the proceedings was the contention that express companies in accepting parcels for delivery were carriers and not forwarders, and therefore should assume all responsibility for the safe delivery of these parcels until they reached the hand of the addressee. It is certainly not fair that the shipper should stand the loss that may be experienced by the express companies handing over a parcel at any outside place to an irresponsible carrier to deliver. The express companies should be made common carriers under the Railway Act, fully responsible for fire, default of persons in their service, and other negligence of carriage.

It is time that the whole question of the express companies' charges and classifications were thoroughly revised. This is for the Railway Commission to do. Whatever may be unreasonable on both sides of the question as between the companies on the one hand and the mercantile community on the other, should be cleared up before the Railway Commissioners. After the present storm it is certain that particular attention will be paid to any further proposed alteration of the tariff by the express companies.

On all sides expressions of approval are heard of the firm action taken by the Railway Commissioners, and the commission is bound to be regarded with greater confidence and respect by merchants and the general public as a result of the incident.

Hardware and Metal Markets

(For detailed prices see Current Market Quotations, page 74.)

MARKETS IN BRIEF.

Montreal.

Tin—Cut of ½c.
Turpentine—Increase of 2c.
Linseed Oil—Advance of 4c.
Paris Green—1c lower.
Boxwood Rules—Advanced from 7 to 15 per cent. on all lines.

Toronto.

Turpentine—Advance of 4c.
Linseed Oil—Increase of 4c.
Tin—Slightly easier.
Plumbs and Levels—Slight decline.
Boxwood Rules—Advanced.
Cordage—New list expected.

MONTREAL HARDWARE MARKETS.

Montreal, Jan. 15.—A very much brighter tone is observable in the markets this week. Orders have increased in general shelf goods for immediate delivery, while booking for spring goods such as lawn mowers, ice cream freezers, green wire cloth, screen doors and hinges is steadily developing. Lawn mowers especially are showing good strength. Of course the fact that travellers are now at work on their territories is largely responsible for this improvement, but in addition to inquiries and general indications show that dealers are displaying much more confidence in the prospects and are beginning to cover their requirements more thoroughly than was noticeable this time last year. Jobbers are still busily engaged with representatives from the United States, and are placing most satisfactory orders. A good year is being relied upon, and measures taken accordingly.

Taking everything into consideration the year is opening out in very fine shape. Lumbermen's supplies after being on the quiet side are now showing much better strength, and cant hooks and cross cut saws are moving well. Carpenter's tools are in better demand.

The markets are very firm in tone. Box wood rules have been advanced from 7 to 15 per cent. on all lines, this making No. 68, for instance, $1.15 per dozen.

BUILDERS' HARDWARE—A spurt is noticeable in these lines. A good demand is expected to develop as stocks are reported light. Discounts on door sets are 50 and 10, escutcheons 50 and 10; escutcheon pins, steel 50, brass 55, spring hinges per gross, No. 5, $17.50; building paper O. K. No. 1 per roll, 75; No. 2, 70.

SPRING LINES — An encouraging movement is noticeable in the booking for spring. Lawn mowers are going very well. Green wire cloth, poultry netting, screen doors and screen hinges are also in better request. Screen doors, stained, $7.80; grained, $8.10; poultry netting, 60 and 2½; green wire cloth, $1.70 in 100 ft. rolls.

SPORTING GOODS—Skates, hockey sticks, and snowshoes are quiet, the weather locally not being so favorable as it might be for these sports. We quote Dominion rim cartridges and C.B. caps, 50 and 2½ per cent.; B.B. caps, 50, 10, 2½ per cent; crown black powder, 20 per cent.

BOLTS AND NUTS—A fair movement characterises bolts and nuts, the advance last week apparently having the tendency to stimulate trade. Discounts on carriage bolts ⅜ and smaller are 70; machine bolts, ⅜ and less, 60, 10 and 10; coach screws, 75; stove bolts, 80 and 7½. Wire nails are still quoted at $2.30.

SCREWS — A better movement is noticeable in screws, all sizes receiving attention. Discounts are maintained at 85 and 10 off for flat head bright; 80 and 10 off for round head bright; 75 and 10 for flat head brass, and 70 and 10 for round head brass.

HOUSEHOLD UTENSILS—Tin ware and granite ware are showing much better strength, and good trade is opening out. Carpet sweepers continue slack, but there is more life to wringers, washing machines, food choppers, and sad irons. We quote Sad Iron, Mrs. Potts, No. 55, 75c; No. 50, 80c per set; Asbestos, $1.50; cake makers, $17.25 per dozen; bread makers, $18 per doz. and upwards.

LUMBERMEN'S SUPPLIES — Lumbermen's supplies are showing stimulation, and cant hooks and cross cut saws are now moving well. Good trade continues to be done in axes, axe handles, and boot calks. We quote, Boot calks, $1 to $1.25 per 1000; Wing calks, $6.50; cant hooks, $12 to $16 per doz.; axe handles, $1 upwards; axes $6 upwards.

TORONTO HARDWARE MARKETS.

Toronto, Jan. 15.—Trade is beginning to liven up after the holiday dullness, stocks being depleted in most staple lines and the general feeling that the coming year will witness a revival in building and industrial activity helping to encourage dealers to fill up the vacancies in their stock. On the other hand hardwaremen are being hit by the open weather in Ontario so far this season, such winter lines as skates, snow shoes, toboggans, snow shovels, etc., not selling as freely as the trade would desire. The holiday sales of these goods were very disappointing in some districts and it looks as though much stock will be carried over until next winter.

Forward orders for spring goods are reported to be very satisfactory, and good bookings are being made for ice cream freezers, lawn mowers, screen doors and windows and green wire cloth.

During the past week prices have been revised on planes, boxwood rules, plumbs and levels, etc., the changes being slight, except in the case of boxwood rules, which are advanced from 7 to 15 per cent. The rearrangement on plumbs and levels are understood to work out a slight reduction with planes showing very little change. The reason for the readjustment is said to be a revision made by the Stanley Rule and Level Co., who have been operating a plant at Roxton Pond, Que., for some time.

Next week we expect to be able to announce new prices on cordage and binder twine. Conditions in the primary markets warrant a decline in prices this season and when new lists are issued we expect prices will be lower, not only on cordage, but also on binder twine.

SEASONABLE LINES—Reports received indicate that skates and snow shovels are selling slowly owing to the lack of snow. Toboggans and snowshoes are also hit by the open weather. No. 19 snow shovels are quoted at $2 net.

SPRING GOODS—Booking business is satisfactory according to the jobbers, an improvement being looked for over last year. Lawn mowers are probably the best sellers, though screen doors are being booked in large quantities in fear of a possible shortage. Refrigerators are also being ordered in considerable quantities. We quote 9 in. 3-wheel lawn mowers at $3.30 to $3.37; screen doors, stained, $7.80, and grained, $8.10 base.

WIRE—New prices on barb wire f.o.b. Toronto are: Galvanized barb, $2.85, and plain twist, $3.20. Coiled spring wire continues at $2.75 f.o.b. Toronto for No. 9. Galvanized wire is quoted at Pittsburg, instead of Cleveland, base sizes, 6 to 9, $2.25. Less than car lots 10c higher. Wire nails are unchanged at $2.30; poultry netting at 60 and 2½, and green wire cloth $1.70 in 100-foot rolls.

BUILDERS' HARDWARE — An increased inquiry is noted and reports everywhere indicate greater activity in this line this year. Door sets, locks, escutcheons and bells are quoted at 50 and 10. In builders' supplies Canadian Portland cement is quoted at $1.70 per barrel f.o.b. Toronto, and heavy straw plain and tarred building paper, $37.50 per ton.

HOUSEHOLD UTENSILS — Carpet sweepers are not active but a good inquiry is being received for tin and granite ware, food choppers, washing machines, sad irons, etc. Lamps and lanterns are also selling seasonably. We quote $6.75 for cold blast lanterns.

HEAVY GOODS—Last week's changes in the list has brought increased inquiries for bolts and nuts. Bar-iron is unchanged at $1.95. Stove bolts have advanced to 80 and 7½. Bright and steel wood screws, flat, 85 and 10, and round head 80 and 10 per cent. Brass screws are flat, 75 and 10, and round, 70 and 10.

MONTREAL METAL MARKETS.

January 15.—With the decided slump in the English tin market local jobbing prices have been marked down ½c, and the quotation of 32½ is now obtaining. This decline has had the effect of stimulating the purchasing of those who are in want of metal immediately, al-

though it has tended to hold off orders for future requirements. Falling prices do not encourage confidence. The other metals are fairly strong in tone, with perhaps the exception of lead. Business in copper has been very fair, while in spelter it is improving. Iron and steel products are firm, with an advancing tendency, and it is extremely probable that higher prices will soon be issued. Trade generally is steady and showing increasing strength. The progress is slow but sure.

The dullness apparent in the primary markets of the world makes us all the more satisfied with conditions in the Canadian markets. In our little way trade seems to be moving much more briskly. In New York there is a general feeling of disappointment that the year has not opened with the active business anticipated. The whole situation shows the folly of allowing the wish to father the thought to too great an extent. A dullness is only to be expected. This is the usual time for such a state of affairs, and although conditions were in favor of an exception to the case this year there was no justification for being too sanguine as to the consuming activity. The disappointment, therefore, has only tended to intensify the dullness. The railroads continue to display no particular anxiety to enter the markets, while the jobbing trade is very quiet.

In the meantime tin has weakened badly, while copper is only being held up by those who are engineering for higher prices. Undoubtedly both metals are facing very heavy visible supplies, the only difference in the two cases — although it is a great one—being that many of the large tin operators have been unloading, while copper producers and large sellers are holding off the market. Spelter continues very firm in both the London and St. Louis markets, and has an advancing tendency. Lead has been showing weakness again. Iron and steel conditions are somewhat weaker in the Old Country, and the whole tone of the market is not quite so good. There is no marked alteration in the United States situation. Pig iron prices are being held, with fair business doing. Steel specifications are a little heavier. There is, however, some talk of shading in finished steel products. A comparison of present prices and those of January of last year in pig iron, billets, finished iron, steel, sheets, nails and wire, shows that lower figures are now generally ruling. For instance, foundry iron, both Philadelphia and Chicago, show a difference of 75 to $1.50 respectively. Steel billets are $3 lower, steel bars and angles are also lower, while in wire nails, and black sheets there is a reduction of 10c.

PIG IRON—Trade is somewhat on the quiet side, but orders are coming in steadily. Canadian furnaces are reported active, with prices firm. It is probable that finished iron and steel prices will be advanced shortly as the market is decidedly firmer. Orders for imported pig are fair, and we quote: Middlesboro No. 3, $19.50; Summerlee No. 1, $21 to $21.50; No. 2, $20.50. Cleveland warrants are quoted at 48s. 4d., a reduction on last figures of 8d. Trade is reported not so good, but this weakening may be the result of the customary mid-winter dullness. Conditions in the States are on the dull side, but there is general confidence in the prospects, and prices generally are held firmly. There are reports of shading in finished steel in one or two quarters.

TIN—The decline in the English market has reduced prices locally, and we now quote 32½c for jobbing lots. Business has been steady, and the reduction in prices had tended to stimulate orders for immediate requirements. Confidence in the market has, however, for the time being, been destroyed. The dullness of the American consumption, and the unloading that has been going on in London by the recent big bull operators, are responsible for the weakness in tin. There is plenty of metal in sight.

COPPER—There is no change in copper quotations. The jobbing price of 15½c still obtains, with a fair amount of metal passing into consumers' hands. The recent hardening of prices in New York stimulated inquiries, but absolute confidence in the market is far from obtaining. The announcement by a copper expert that the increase in the stock of refined copper is over 100,000,000 pounds compared with January of last year, shows that even the record exportation to Europe has not kept down the surplus caused by the great production going on. Consumption is quiet in the States, but producers and large sellers still appear confident. They have been trying hard to force the market upwards, but find it increasingly difficult the longer legitimate buying is held off.

SPELTER—Spelter is very strong in tone. Orders are steady, with a tendency to improve. Prices are unchanged, and we quote $5.50. The English market is in a very firm position, and at present holds the record for stability. St. Louis prices have advanced 5c.

LEAD—Lead is unchanged at $3.70 for imported pig. Trail is about 10c less. The English market is weaker again, and there seems a prospect of lower figures ranging. Trade locally is fair.

TORONTO METAL MARKET.

Toronto, Jan. 15.—Continued quietness rules the local metal situation and on the whole prices are somewhat easier, though quotations remain at the old figures. The forecasted and anticipated resumption of business after the holiday season and at the turn of the year has not yet materialized. Buying is still done from hand to mouth, and manufacturers are not stocking up. Jobbers did stock up a little in anticipation of business, but when buyers do not care to take stocks they cannot be forced into making sales. Iron prices are low, copper prices are unsteady and tin is fluctuating. The last named metal declined in London, New York, Montreal and Toronto early in the week, but it is back again at last week's quotation. Stocktaking is still the order of the day and this to some extent has hampered present business.

PIG IRON—Quotations are the same as have prevailed for some time past—Cleveland, $22; No. 3 Middlesboro, $21; Canada Foundry, $18.50. Output is increasing. There is again talk of cut prices in the United States, but with the exception of lower prices in steel plates there is no change as yet across the border, and no tendency towards lower prices here.

COPPER—Unstable prices are still a factor. It is believed in many quarters that over-production is one reason why buyers are shy, thinking that because of this they can do better by waiting. Two companies have recently been formed in the Eastern States to deal extensively in copper and to restrict to some extent the output and production of copper, thereby putting the metal on a firmer base so far as price is concerned. This is no new feature, as a similar plan was tried some three or four years ago, but the experiment was only partially successful. There is plenty of money behind the new companies. The local price is still at 15½c.

TIN—Probably more than any other single line tin is talked of to-day. The price has gone up and down pretty frequently of late. This week opened with a slight increase, but the high figure was held but two days, when it declined again. One good thing is the fact that none of the metals go below the present base. One thing that appears to retard an advance is the knowledge possessed by all interested that there is plenty of tin in stock and in sight. The price is yet $31 to $32, though some was offered this week for $30.

LEAD—Imported pig is at $3.80 locally, and the metal is held firm at the price. At present lead is a very stable article and it does not at all participate in the fluctuations of the other metals.

SPELTER—Trading is steady with this line, though no great volume of business is being done. Quotations remain at last week's figures, $5.50.

SHEETS AND PLATES—Though plates are unsteady in the U. S. they are not so here. Prices are the same. Importations are made in large lots at certain seasons, so the speculative element is eliminated more or less and in consequence there is very little fluctuation in price.

OLD MATERIALS—This line has again gone to the quiet side of the street. All old materials are easy and rubber especially so. Prices are the same as last week, and buyers are paying for: Light copper, 11c to 11⅛c; heavy copper wire, 12¾c; heavy red brass, 11 to 11¼c; heavy yellow brass, 8¾c to 9c; light brass, 6½c to 6¾c; heavy lead, 3c; zinc, 3¼c to 3½c; No. 1 wrought iron, $10; stove iron, $12; machinery cast iron, $14; rubbers, 8c to 8½c.

U. S. IRON TRADE.

Cleveland, Jan. 14.—The Iron Trade Review says: Progressive developments in the iron and steel industry have been almost entirely lacking during the first several weeks of the new year. The general condition of the market is practically unaltered; sentiment and expectancy are favorable, but actual improvement is slow. Some steel makers who had anticipated a sharp turn for the better after the first af the year are inclined to be somewhat disappointed, although it is appreciated that it is quite early to draw conclusions.

It is becoming evident that some factor, generally believed now to be the tariff, is likely to have a deterrent effect upon the motion of the industry toward a normal basis. The usual expectation is that the new tariff bill will not be framed or enacted before June

or July, and that the market will be obliged to undergo this element of uncertainty throughout the first half. It is hoped that even the probability of a radical revision will be discounted by the trade long before final legislative action, but the buying public appears slow to make up its mind upon this question.

The attitude of the railroads in lending little support to consumptive demand by reason of their own difficulties, is changing very slowly for the better. Some evidence for encouragement is presented this week in the application to the mills by the New York Central lines, for 80,000 tons of steel rails for 1909 delivery. This action is virtually equivalent to the placing of the contract, as the specifications governing the manufacture of the rails have been agreed upon between the railroad and the makers. The New York Central is the third line to place a large rail order covering this year's requirements, the others being the Pennsylvania and the Chicago Burlington & Quincy. The Pennsylvania lines this week began to specify against their contract for 135,500 tons, and it is anticipated that the full tonnage will be rolled by the mills during the present winter.

THE FUR MARKET.

Montreal, Jan. 15.—The tone of the fur market is decidedly strong, higher prices being realized than at this time last year, especially is this noticeable in lynx, dealers now offering as high as $12 for good specimens. Fox is scarce, and high prices are going for good skins. Fisher are also in strong request, $9 being offered in some cases. The attempt to farm foxes up to now has proved a failure. We quote: Mink, $5 to $6.50; marten, pale, $4 to $6; dark, $8 to $20; fox, red, $2.50 to $4.50; lynx, $5 to $12; otter, $15 to $25; fisher, $5 to $9; weasel, 25c to 35c; muskrat, 15c to 25c; Canadian coon, 75c, to $1.25; skunk, 40c to $1.25; bear, large, $8 to $10; small, $3 to $5.

OLD EXPRESS RATES RESTORED.

After being in operation for a few days the new classifications and rates of the Canadian express companies, which had aroused complaint all over the country, were abrogated by the Board of Railway Commissioners, sitting in Ottawa on Monday, the old tariff thus coming into force again. During last week sittings were held in Montreal, and it was seen from day to day that the weight of evidence was going against the express companies, and it was not a matter of very great surprise when Judge Mabee intimated on Friday in Montreal that he would cancel the rates.

In the evidence taken at Montreal strong objection was made to the new form of contract, and to the clause providing for valuation charges to insure against liability to loss where the consignment exceeded in charges $50. The necessity of examining goods for valuation was generally considered a severe onus on the mercantile community. It was also contended that if the express companies accepted a parcel they should assume all responsibility for its transportation. Another strong point was the imposition of a charge on returned empties and the weight and measurement rule. It was also pointed out to the Railway Commissioners that the increase in tollage would amount in many cases to about 100 per cent., and that the new tariff was not only unreasonable, but an unworkable proposition. The clause preventing enclosures being made in parcels is also considered objectionable. According to the new regulations agents were instructed to refuse to accept parcels containing enclosures.

J. E. Walsh, manager of the transportation department of the Canadian Manufacturers' Association, made the strong point that the express companies in accepting parcels for delivery became not so much forwarders as carriers, with the asumption of all the responsibilities of a carrier, and that it was not practicable for a shipper to prove to the satisfaction of the express companies a case of fraud or of negligence on the part of the express companies. He did not think sufficient information was supplied to shippers by the express companies relative to tariffs and classifications. There were 122 changes in the new schedule, the majority of which made provision for advances in rates.

It was pointed out by the express companies that in regard to the new rates that there had been no attempt to deceive the board. The new tariff was filed with the board in March, 1907, and the matter was carefully considered by the board.

Judge Mabee took much of the blame for the crisis which had come about, admitting that the new classification had been approved without proper knowledge of what it meant. The board's traffic officer had not clearly grasped the scheme, and he blamed the companies for not furnishing fuller details of the changes. The whole point was that there was a distinct understanding that the rates should not be increased, and they were increased.

In giving his judgment cancelling the rates, Judge Mabee said that it was not on an inconsiderable volume of traffic that the rates had been increased through the charges on returned empties, and the adoption of the weight and measurement rule. It had been shown that the movement under these heads was large and considerable. The increases, it was said, would run up to nearly 100 per cent. When this classification was approved he understood that such charges as were made, were small, and that upon the whole they were a reduction and not an increase. With regard to the charges on returned empties, the effect of the new charge upon only some eighteen or twenty shippers would be to cause an increase of between $25,000 and $30,000 in express tolls upon the volume of business in 1908. Judge Mabee did not understand this when approving the change. "We are," he continued, "of opinion that the order approving this classification be rescinded, and that this classification and variation of the old rules be disallowed." Of course this is not to be regarded as a final disposition of the matter, but merely leaves everything connected with the express business as it stood prior to January 1st.

The order of Judge Mabee, it is stated, has created great confusion, as the old rates were in many cases destroyed by the agents when they received the new notices. It was made plain to the companies, however, that they must inform their agents at once of the changes, and during the time it will take to get copies of the old rates printed the agents will have to get as close to the old rates as their memories will allow them. Ten days' grace was given in which any claims for overcharges will be dealt with by the commission, regard being had to the energy displayed by the companies in informing their agents of the change.

Thus ended a notable episode in the history of the Railway Commission work.

GERMANY AND THE BRITISH PREFERENCE.

From the Standard of London, England.

Great importance attaches to the formation in Berlin of a German-Canadian commercial association for the purpose of promoting trade between Germany and Canada. The association is the outcome of a conference of German merchants, manufacturers, and politicians which met here privately, and determined to take all possible measures to promote the growth of trade between the two countries. An influential executive committee, representing weighty financial and commercial interests, was elected.

The ultimate aim of this association may be defined as the development of such extensive trade relations between Germany and Canada that it shall become extremely disadvantageous to the latter country to maintain the existing preference in favor of Great Britain. Influential German merchants and manufacturers, who are interested in the increase of trade with Canada, recognize that nothing can satisfy them except the creation of conditions of equality under which Great Britain and Germany shall compete for trade with Canada. The efforts that the German-Canadian Association intend to make with this purpose have a political significance. Germany fears that any extension of preference between England and her colonies will inevitably entail a severe blow to their own interests.

Far-seeing Germans believe in the possibility of inserting the thin end of the wedge to prevent the extension of preference within the British Empire by such trade development as is proposed. German firms supplied half the steel rails for the Canadian Pacific Railway and large quantities of German steel material have been supplied for the construction of Canadian bridges. Messrs. Krupp, of Essen, supplied the axles of practically all the heavy railway carriages on the Canadian railway, so that enterprising Germans see great opportunities in a profitable extension of their trade with Canada.

C. Worden, hardware merchant, Weyburn, Sask., was a visitor in Toronto during the week.

Hardware Conditions in Great Britain

(By Hardware and Metal's European Correspondent).

Sheffield, Dec. 31.—The year is finishing very quietly. Nearly everyone has had an unsatisfactory time, and there is a prevailing desire not to incur any expenditure which can be conveniently postponed until the beginning of another quarter.

Trade has reached a very low ebb, but it is felt that an improved state of things at an early date is inevitable.

One very satisfactory feature is that the threatened dispute in the engineering trade, which I mentioned last month, has been avoided. The men agreed to accept the decision of the arbitrator, Sir Hugh Bell, who is the president of the Iron & Steel Institute, and Sir Hugh held that a case had been made out for a reduction of two shillings per week in wages. While the men have accepted the decision, they have done so with very little grace and I am afraid that they will not look kindly upon the suggestion to form a permanent conciliation board in the district.

A Tin Plate Story.

I notice that the fairy tale manufactured in a London newspaper office about a gigantic tin plate combine, to control the industry throughout the world, has reached Canada, but I have the best authority for stating that there is not an atom of truth in it.

The industrious inventor of the paragraph stated that "for some considerable time the dumping of foreign tin plates in the United Kingdom has caused considerable anxiety to British tin plate makers." As a matter of fact, not one single box of tin plates has come to this country for years. Readers of Hardware and Metal will be interested to hear that the United States was our largest customer last year, India coming second and Germany third. Trade with America is increasing rapidly and mills have been running continuously. New mills are being erected at Cwmfelin, Upper Forest, Norriston, Pontardawe and St. David's Works.

American vs. English Patterns.

H. Wilkins, managing director of Martin, Hall & Co. silver and electroplate manufacturers, of Sheffield, has been on a business tour in Canada and is firmly convinced that the bumper harvest will mean good business.

In an interview on his return, he expressed the opinion that British manufacturers would stand a better chance of doing trade in plate if they discarded the idea that the Canadians want American patterns, which are often elaborate and vulgar.

Certainly, there seems to be no reason to believe that, because the Americans were first in the field, British manufacturers should copy their style. At any rate, an opportunity will be given for testing the virtue of the British pattern in competition with the American and I have no doubt that it will be given the palm for elegance and artistic design.

The Best Wanted.

I find on every hand a healthier tendency on the part of consumers: they have begun to realize that the best is the cheapest. The housewife has found that low-priced cutlery is never satisfactory and never serviceable. It wears out much sooner than a good article and never has a good edge for five minutes together. The manufacturer for a long time has responded to the demand for inferior goods, and now he finds there is a healthy revulsion against them. Customers ask for the best steel and the retailer with big stocks of inferior goods finds that buyers are fewer.

It must not, however, be supposed that ivory-handled cutlery is in common request. Owing to the prohibitive price of ivory, enhanced by the constant demand from America, ivory-handled cutlery sells only in small quantities and a knowledge of the state of ivory market and ivory supplies leads to the belief that ivory will became a rarity before very many years have passed. It is not only the housewife who is discarding the "cheap" article, but the manufacturer is doing so also. Cheap files, largely from America, have had a long vogue, but they break easily and very soon lose their good qualities. In many works records have been made of the "life" of the so-called cheap and of the higher-priced files, and it has been found that the higher-priced article is the cheaper in the long run.

It is the same with tools used in the engineering trades and elsewhere, and there is a constant inquiry for the best grades of high-speed steel. Altogether, the tendency is satisfactory, both to the manufacturer and the consumer.

Export Trade.

The Board of Trade returns for November indicate that in some branches British trade with Canada is on the upgrade, but in others is far from satisfactory.

For example, the value of exports of unwrought tin to Canada last month was £11,830, more than twice as much as in November, 1907, with its total of £5,371, and well ahead of the November, 1906 total of £8,350. On the year, however, 1908 is behind both 1907 and 1906.

Tinned plates too, are better than in the corresponding month of 1907. The value was £24,657, compared with £21,188 in November, 1907, and £43,074 in November, 1906.

Galvanized sheets were of the value of £24,466, compared with £15,557 in November, 1907, and £30,167 in November, 1906.

On the other hand, pig lead and manufactures of pig lead were £6,287, only about half the November, 1906, total of £12 580 and a fairly long way behind the November, 1907 value of £7,918.

In cutlery there is a good deal more headway to make, for the November value was £6,426 compared with £7,291 in November, 1907 and £8,461 in November, 1906. But the Sheffield manufacturer does not despair of getting the figure up to the level of times gone by.

Hardware was £5,161 in November, compared with £4,534 in November, 1907, and £3,579 in November, 1906.

The steel exports to Canada are very small. In November the weight of steel bars, angles, rods and shapes or sections was 2,979 tons, certainly better than 1,996 tons in November, 1907, but very far short of the total of 7,035 tons in November, 1906.

High-Speed Steel Litigation.

Steel manufacturers in this country are eagerly awaiting the decision of the United States judge, who has had placed before him the details of the action of the Bethlehem Steel Company of Philadelphia, against a user of high-speed steel. The latest information here is that judgment has been reserved.

It will be remembered that the company aver that their patent rights in the Taylor-White process entitle them to say that steel shall not be hardened at the particular temperature for which the Taylor-White process provides. Strange to say, the manufacturer of the steel is not being interfered with, probably because the plaintiffs see that if they can restrain the user they restrain the manufacturer at the same time.

Therefore, British manufacturers who make high-speed steel have combined to fight the case, for they readily see that judgment against the user means that there is an end to the export of high-speed steel to the United States. A large number of firms in Sheffield and elsewhere do a big business in this line with the States, and it is therefore easy to understand their anxiety to stop the inauguration which the Bethlehem Steel Company seem anxious to initiate.

There is no telling where the matter would end, for no doubt the company, if successful in one case, would consider the advisability of testing their position in Germany and other continental countries where they have taken out letters patent.

A counter-blast has been arranged in the shape of a combination of high-speed steel makers in the States and their fellow manufacturers in Great Britain, who are associated for the purpose of the present action. They propose to resist the move of the Bethlehem Company to a finish; and before such formidable opponents probably the men of Bethlehem will deem it unwise to prolong the litigation unnecessary.—R. A.

Maritime Provinces

St. John Iron and Hardware Association's New Officers — Hardwaremen Taking Stock—New Hardware Company.

HALIFAX.

January 11.—The hardware trade is very dull just at present, and the jobbers, taking advantage of the dullness, are stock-taking, so as to determine the results of the year's business. Business during December was, on the whole, about as good as the previous year, taking into consideration the many low values, which, of course, have a tendency to keep the amount of the sales down. While the majority of the buyers expected a change in the prices of tarred products at the first of the year, these, for the present remain unchanged. It is generally understood, however, that there will be a sharp advance before the spring. The dealers are anticipating a heavy demand for haying tools next season. The demand for fishing supplies during the past season has been good. Some years ago American nets and twines had practical control of this market, but now the business appears to be divided with the Scotch nets and twines. The wholesale dealers have received notice of the following changes in discounts:—Galvanized pails, 40 to 50 per cent. off; coal hods, 40 to 50; stove pipe and elbows, 40 to 45; pieced ware, 35 to 40; galvanized buckets, 45 to 50; galvanized ware not mentioned, 40 to 50 off.

Albert W. Smith, of the wholesale hardware firm of George E. Smith Co., says:—"Wholesale buyers are feeling somewhat annoyed at the manner in which the anti-dumping clause in the customs tariff works out in practice. Under present ruling conditions wholesale houses are compelled to sell goods ahead and protect their customers against an advance in price. This is rendered doubly difficult at present by the "anti-dumping clause." No matter how careful a wholesale buyer may be, he is liable to lose money by it. For instance, certain foreign manufacturers consider that they can sell an article for a certain price. They negotiate with a wholesale buyer with a view to making a sale. The merchant buys in what he considers to be the cheapest market, which in this case would be considered a foreign market. He then instructs his travelers to dispose of his purchase for future delivery at a certain figure. In the meantime, perhaps, the market for this particular commodity has advanced, and the customs promptly impose the anti-dumping clause on this importation. The result is that the merchant stands to lose in every case. From the Canadian manufacturer's standpoint this is a good proposition for their own particular benefit, but it is not doing the wholesaler, the retailer, or the consumer and the country at large a very great injustice. When a dealer is willing to pay the regular customs tariff, and when after he has bought the foreign market changes, and the anti-dumping clause is applied the effect is to greatly increase the expense of importation and prevent our business men from buying in the cheapest market.

"It is to be hoped," says Mr. Smith, "that the Customs Department will see its way clear to remove the offensive clause from the tariff and give our dealers an opportunity of investing their money in the most advantageous manner. The Canadian manufacturer can never expect to receive the support of an intelligent public as long as he fosters and supports unfair and prohibitive customs regulations."—J.H.

ST. JOHN, N. B.

January 12.—At a meeting of the St. John Iron & Hardware Association, held on January 4, the following officers were elected: John A. McAvity, President; Miles E. Egar, Vice-President; W. H. Thorne, Thomas McAvity and W. S. Fisher, Directors. A very interesting paper on the subject, "Cash as Credit," was read by W. S. Fisher.

Hardware merchants are all busy now taking stock. Since the first of the year the employes have been working until 7 o'clock in the evening, and good progress is being made.

For three days, January 6 to 8, St. John was practically isolated from the outside world as a result of a heavy gale and snowstorm on the 5th and 6th. The I.C.R. was tied up for about 24 hours, and the C.P.R. did not get a train in or out from Tuesday night until Friday afternoon, owing to washouts along the line. Dozens of bridges all over the Province were wrecked, and many thousands of dollars in damage done. The holding up of mails was a great inconvenience to the business men.

A company is being formed to further develop the iron deposits in Gloucester County.

T. M. Burns, Bathurst, holds an option on a property known as the Ellis iron areas, at Milstream, Beresford parish, which a company will take over as soon as preliminary arrangements are completed. Asked as to the company's plans, Mr. Burns said beyond the intention to develop and prospect the area, which was about a mile square, nothing definite had been decided. It was possible that the property might be disposed of to the Drummond interests, which owned areas in the same district.

A comparative statement of the exports of lumber from this post for the years 1907 and 1908, shows a decrease of over 73,000,000 feet in the past year.

Employes of St. John business houses seem to have developed a bowling fever. A league has been formed with 14 teams, known as the Commercial Bowling League, and a number of prominent hardware firms are represented. The first game was played on Tuesday, December 5, in Blode's Alleys, between T. McAvity & Sons, No. 1, and the Dunlop Tire & Rubber Goods Co. aggregations. The latter won by a score of 1169 to 1124, and scored four points.

Letters patent have been issued by the Provincial Government incorporating Carlotta E. Rigby, A. Roy Rigby, Brighton; John H. Rigby, R. Foster Rigby and Nellie M. Rigby, St. Croix, as the Rigby Hardware Company, with a capital stock of $9,900. The company will have its place of business in Hartland and will conduct a general wholesale and retail hardware business, and will continue the business heretofore conducted at Hartland by Carlotta & Gigby.—W. E. H.

Ontario Trade News

New Glue Factory at Kingston—Canadian Cordage Co.'s Meeting at Peterboro—Belleville Hardware Company Change—Brass Works at Brantford to Enlarge—The Vulcan Co., London, to Make Stoves—Letter Boxes Sell Well at Chatham.

OTTAWA.

January 12.—Most of Ottawa hardware stores and sporting goods houses are giving discounts on sporting goods this month.

The Hardware Association had nothing of special importance on its order paper for its last regular meeting, but as its next meeting on the first Friday in February will be the annual one, some items of interest are anticipated.

Prospects are bright for the erection of another big building on Sparks Street on the site of Ahern & Soper's premises by this firm. The proposed building will be a six-storey structure of steel and concrete.

Another apartment house is also announced for erection on Albert Street, facing the City Hall Square. It will be erected by H. N. Bate, and will adjoin the Aylmer Apartments, which front on Slater Street.

The Ottawa Car Company has received an order from the Halifax Street Railway for two pay-as-you-enter cars, similar in style to those in use by the Ottawa Electric Railway.—G. E. M. H.

BELLEVILLE.

Jan. 11.—The local hardware merchants in this city reported business very brisk during the holiday season and are looking forward to a continuation of the same. The weather has been very mild, in fact, sleighing has been out of the question since Christmas, wheels being used. The hardware men announce a surplus in snow shovels. The coal men are deploring the lack of cold weather and the ice men are beginning to worry about the ice crop.

During the last week an important transaction took place when T. S. Carman, proprietor of the Ontario Newspaper, and one of the biggest real estate owners in this city, and who has been always greatly interested in the Belleville Hardware Company, purchased 80 more shares in stock of that company from Sir Mackenzie Bowell. He has practically secured control of that company. The price paid was $150 per share, the par value of each is $100 per share. This is another sample of the good judgment shown by Mr. Carman in his investments.

Great news was sprung on the citizens this week when the announcement came that 135 men had been added to the staff of the Rolling Mills, the 9-in. and 18-in. resuming operations with full staff. The companies have orders ahead to keep them going for several months, getting out bar iron and horseshoes, the latter department being in full swing.

The local hardware dealers report the greatest sale of skates in years. Nearly every college, of which there are many, and every business place having hockey teams. Never before has there been so much enthusiasm shown for hockey.

The civic elections this year created interest, the contest being between L. W. Marsh and Wm. H. Panter. The result was a decided victory for Mr. Marsh by the majority of 185. Needless to say, the victory was a popular one as was was evidenced by the reception Mr. Marsh received the night of the election.

Mayor Marsh was born in Frankford, June 29, 1871, his parents moving to Belleville when he was between three and four years of age. In 1893 he took a commercial course at the Ontario Business College, and in August of that year took a position as accountant with the G. & J. Brown Manufacturing Co., of this city, which position he held until January, 1897, when the company went into liquidation. In February of that year he, together with Mr. Henthorn, his present partner, made arrangements for the continuance of the foundry business, and since that time and up to the present he has been in charge of this business. Through his business education and training he has been able to make a success of it, the output of the business having been trebled since the time he took hold of it. His firm now employs from 50 to 100 hands, according to the demands of the business, and has a pay sheet of from $25,000 to $35,000 per year, which is of much advantage to the city in many respects.

Mr. Marsh sat in the City Council as alderman for five years, from 1903 to 1907 inclusive, and in January, 1908, contested the mayoralty with ex-Ald. Allen McFee, being defeated by 29 votes.

His election this year by the handsome majority of 185 shows the estimation in which he is held.

KINGSTON.

January 12.—All the hardware merchants report a fairly good trade, this week. There was, of course, the usual slack period after the holidays, but now everything points to good business. In the line of sporting goods, there has been a good demand for skates and hockey sticks. All the rinks are open, and there has been good skating on the harbor for a week.

Ald. Robert Elliott, of Elliott Bros., hardware dealers and plumbers, has been honored this year with the chairmanship of the Light, Heat and Power Committee. He is a practical man, and is sure to make good. Ald. Angrove, foundryman, was re-elected chairman of the Property Committee, which position he ably filled last year.

Andrew McIlquham is erecting a glue factory in Victoria Street. The building will be completed in June.

Charles Jackson, attendant at the Armories, has secured a patent for six years for the manufacture of his automatic target, which has been in use by military authorities for many years.

Last Monday evening one of the fastest hockey matches of the season was played at Kingston by teams representing the retail hardware firms of S. J. Horsey and A. Strachan, vs. Edwin Chown & Son, jobbers. At times the class of hockey played put the Stanley Cup matches to shame. Charles Simpson, upon whom the Strachan-Horsey organization depended, was unable to find his skates, and this fact, no doubt, was the cause of their defeat. At times, Referee Camic found it very difficult to keep track of the players, their greatest offence was loafing (on the fence), but considering all circumstances, he kept the players well in hand. Any broken joints were quickly "soldered" up by the tin men and the game went on. The goal judges had a rather difficult task, but as far as they can remember, the score ended 15 to 1 in favor of the wholesalers.

The by-law for a bonus of $10,000 to the Warmouth Piano Co., to re-establish their factory, and which was defeated election day, will be submitted to the people again on February 4. The Council agreed to this, and the Board of Trade is putting forth every effort possible to have the by-law passed this time. It was defeated by 47 votes last time. Other cities are anxious for the works, and have made tempting offers.

Plans are being prepared for the reopening of the Frontenac Hotel, Ontario Street. It is proposed to have a passageway between the Frontenac and the British-American Hotel, both to be under the management of Walter Telfer. —E. G. B.

NAPANEE.

January 5.—One of the windows in M. S. Madole's hardware store has been decorated lately in a manner which has attracted a great deal of attention and is the subject of a great deal of discussion because of the novelty of the thing. The artists were Chas. Eyvel and W. J. Robinson, two members of the staff. The subject is a miniature marsh and is intended to call attention to the money to be made out of trapping. The background of the window is arranged to represent a rail fence. The rails are small round cordwood sticks. Evergreen trees and shrubs are arranged in such a way as to give the appearance of a small bush. The bottom of the window is worthy of notice as it shows a muskrat's home and surroundings. The mound is made of a bushel basket inverted and covered with moss and leaves. A stove pipe covered in the same way is used to form an entrance to the mound. A short distance in front of the entrance is a piece of tin and represents a bit of open water. Moss and dead leaves are laid over the entire bottom of the window and to any but a close observer looks like the brown earth. Near the mound is a log and peering over it is a coon with a startled look on his face and gazing at him from the other end of the log is a weasel. A grey squirrel may be seen at the top of the rail fence. Placards are placed about giving facts about the fur industry. It is well worth observation and the originality of the scheme will be better realized after seeing it.—W.W.

PETERBORO.

January 11.—Local hardware houses have nearly completed stock-taking, after which it will be possible to secure an idea of the amount of business done during the past year.

A note of warning has been recently passed around to the citizens with regard to a peddler who has been selling from house to house a brand of solder which is practically useless. One man who made a purchase states that the peddler claimed his article to be as good as any found on the market, but on trying to use it he found it absolutely worthless. He disposed of a rather large quantity of the article, and on leaving the houses always stated that the article to be soldered must be left several days in order to allow the solder to harden. One of those who bought a sample of it states that the solder is still like putty and will likely never harden.

The annual meeting of the Canadian Cordage Co. was held last week, when the financial statement and auditor's report was presented to the shareholders. It was stated in the report that during the past year the lumbering and shipping trades were affected by the great financial depression which resulted in a substantial curtailment of the volume of the company's sale of rope and lath yarn, although there was at the same time an increase in their twine sales. Owing to the financial depression which resulted in the depreciation

in value of the heavy stock the company had on hand in the beginning of October last, rather great loss was sustained. The fibre market dropped, with the result that it was practically impossible for any manufacturer to make a profit. The directors regretted that there were no available profits with which to pay a dividend upon the common stock, but since the first of the season the company had been running close to its full capacity and better results are anticipated in the future. It was decided to have a full investigation into the management and affairs of the company in respect to the gross profits during the last two years. The meeting closed with the election of directors and appointing of officers.—B.L.

HAMILTON.

January 11.—It is felt that a new note has been struck in the mercantile and business world generally in Hamilton this year. Although the year is young yet there is a briskness and business activity flaming up which seems to inspire new life and to augur well for the success of this year for the city, the mercantile and manufacturing interests and the citizens at large. It can safely be said that 1908 was a very unsatisfactory year for Hamilton, and of a nature, the repetition of which would prove a severe blow to the business interests of the city. While many manufacturers and business men were loath to confess the real state of affairs in regard to their business, now that there is a brightening on the horizon, they are inclined to be more frank and are for the most part admitting that little progress has been made by the city at large, which in business is really a loss. However, with the holiday season and the elections over and the appointment of new men to office, new life has been inspired, and confidence and hope are the result. Already many of the industries which have been closed or running on short time for several months, are taking on full staffs and a few of them are running nights.

In Hamilton much will depend on the city council and the feeling is prevalent that a general movement for the advancement of public and private interests will take place. It is pleasing to note that this movement has already been forecasted by the new mayor, John I. McLaren, in his inaugural address. The most important steps advocated by him, which affect the business interests, are the appointment of an industrial commissioner, the filling in and redeeming of marsh lands for manufacturing purposes and the improvement of the docking facilities. Almost equally important is the instalation of a civic power plant and the introduction of the Hydro-Electric power as means of competition with the local power monopoly with a view to guaranteeing to manufacturers and residents a uniform rate for electric power. A striking evidence of this latter requirement was given recently by the Otis-Fensom Elevator Co., when negotiations were in progress to induce the company to refrain from removing to Toronto. It was learned that the company was developing its own power cheaper than it could secure it from the Cataract Power Company.

The appointment of an industrial commissioner is of vast importance to the merchants and manufacturers, as Hamilton has not been getting its share of new industries of late and the consequence is that there has been more men out of employment and less money in circulation. The duties of industrial commissioner were performed by the assessment commissioner in former years, and many fine industries were secured, but owing to the growth of the city the assessment duties have grown so that separate officers are required. An encouraging feature is the prospect of obtaining competition from the Hydro-Electric Commission, in view of the decision rendered last week in the courts to the effect that a contract made by the city with the Cataract Power Co. for five years was only valid for o' year. The reclaiming of marsh lands will mean the building of new factories and this and other proposed works should provide occupation for many contractors. Apropos of this, it is proposed to locate a new site for a new city hospital building and while this may not be accomplished this year, it promises well for the future.

W. K. Snider who has been appointed hotel commissioner by the Provincial Government, is a brother of Judge Snider, of this city. His appointment, while meeting with much favor, was somewhat of a disappointment to the friends of Col. Stoneman, of this city, a Knight of the Grip, who, it was thought, would be appointed to the new office. Col. Stoneman is popular with the profession and being a man who has done a lot of traveling in his day he was considered to be well qualified for the position because of his knowledge of the inconveniences and dangers which beset the traveling public.

The fire losses in Hamilton during the past year were $10,000 in excess of 1907. None of the fires affected hardware institutions. The total loss was $97,761.04.

One of the busiest concerns in the city at present is the Chadwick Brothers' brass manufacturing works. It is working night and day, One of the biggest contracts is an order for automobile lamps and brass work for such machines for the McLaughlin-Buick Company, of Oshawa. The firm is also fulfilling large contracts for stop cocks and other brass work for the city waterworks department. It has just completed some of the brass work to be used in the new $30,000 fire station, including brass poles, etc. Owing to its increasing business the firm is undertaking the erection of an addition, 150x65 feet, at a cost of between $5,000 and $10,000.

The contract for the hardware supplies for the technical school which is being built in connection with the Collegiate Institute, has not yet been let by the Ontario Government. The brickwork of the building is completed and the contract, which will be well worth the while, will have to be let soon. Joseph Rodgers & Son have the plumbing contract for the new building, which will run between $4,000 and $5,000.

Adam Clark & Son have the contract for the plumbing in the new East End fire station, amounting to about $1,000.

At a meeting of the Board of Trade last Thursday, W. B. Champ, of the Hamilton Bridge Works, was unanimously elected president for the ensuing year. Mr. Champ is a young business man who is going ahead fast, and under his guidance the Board of Trade should boom. The meeting also carried a motion to petition the Government to appoint two senators from Hamilton.

The Hamilton Stamp & Stencil Works has been re-organized and has secured a charter with a capitalization of $40,000.

Among the patents recently granted was one to the late W. J. Copp on an appliance for stoves and ranges. The application was made for the patent a short time before Mr. Copp's death and has just been granted. D. L.

BRANTFORD.

Jan. 11.—The three by-laws which were submitted to the ratepayers on Monday last were defeated by large majorities. They were to vote $100,000 for the erection of a new collegiate institution, $5,000 for a nurses' home, and $20,000 for Niagara power purposes, to build a distributing plant in connection with the Hydro-Electric power scheme. Some further steps will be taken with the erection of a new collegiate institute, and the by-laws will likely be re-submitted in April.

The total value of the building permits for 1908, as issued by the engineer's department, amounts to $289,855 a decrease of $220,190 from 1907. As there were no large factories or additions to factories last year, the record is a very satisfactory one.

A number of local firms claim to have been the victims of a Hamilton firm dealing in floor oil, and linseed polishing soap. Last spring a representative called and took their orders on the condition that if the shipments were not up to sample they could be returned. The shipments were not up to the standard, and were returned, but the Hamilton firm refused to take them. The railway company, it is understood, is suing the consignees for transportation charges, but the local merchants are standing together to fight the suit.

The Forest Brass Works have received orders for five times the capacity of the present plant. In order to meet the demand it is proposed to increase the capital stock by organizing a joint stock company, with an additional capital of $10,000, much of which is already subscribed. With a free building and no taxes for ten years, the works have a great advantage over concerns in other towns.—A. W.

ST. THOMAS.

January 11.—The different dealers are busy taking stock and putting on sales of left-over goods. As the stove trade is over, every one is giving reduced prices in order to clear off the balance of stock.

Metal workers and furnace men say they have had one of the best seasons they have experienced.

The new houses that have been put up the past year had specifications covering up-to-date plumbing and heating systems.

The James Smart Co., Brockville, supplied a new heating system to the School Board, for which they asked payment, but have been held back on ac-

count of the weather not having been severe enough to thoroughly test it yet.

The $20,000 by-law to the Standard Implement Co., Port Stanley, was defeated, as the required number failed, 151 votes being necessary. The by-law was supported by 126.

Harry Flowers, an old Ingram & Davey clerk, is paying a visit here. Harry is now located with the Regina Hardware Co.

The different factories have all been busy taking stock, and are resuming business with full staffs.

Visitors to this city comment on the way citizens keep their homes looking good. Besides the work of painters, the sale of ready-mixed paint is large. As a general thing the different shop men do their own painting.

Decatur, Bull & Co., Montreal, have arranged to handle the different lines made by the Erie Iron Works. G. A. T.

INGERSOLL.

Jan. 11.—Chas. Hislop is in town shaking hands with old friends and acquaintances after a three years' absence. He went to the West three years ago, settling in Carstairs, Alta., where he has since conducted a flourishing hardware business and he has high hopes as to the possibilities of the future in that growing town. Before going to the West Mr. Hislop was for a number of years in the employ of W. H. Jones, who has long been established in the hardware business in Ingersoll. Mr. Hislop is a young man progressive and at all times attentive to his business interests, and it was with pleasure that his friends here learned of the good fortune with which he has met in his western undertaking.

The new quarters of the Royal Bank of Canada, at the corner of Thames and King Sts., will prove a distinct ornament to that section of the town. Although some of the exterior work is yet to be completed the building is now occupied.

W. H. Jones, who, in years past, was prominently associated with the affairs of the town, will this year occupy a seat at the Council Board. He was elected alderman by acclamation. Mr. Jones is a man thoroughly alive to all civic questions and his well-known executive ability enables him to render valuable service. It was with deepest satisfaction that many citizens learned that he would once more assist in the transaction of the town's affairs.

While the weather has been unsettled of late, the roads have been in good condition as compared with the snowdrifts of previous winters and all things considered, there has not been such a noticeable "after Christmas" dullness about trade. The local dealers were will pleased with the holiday trade. More money appeared to be in circulation than a year ago and people bought freely. The open weather has enabled the country people to go about their usual work with only slight interruptions and as a consequence the hardware merchants have not noticed the falling off in trade which invariably follows the Christmas season.

LONDON.

January 12.—Seasonable quiet continues in the hardware as in other lines of trade. The heavy snowfall of Monday night has given us good sleighing, which should have the effect of brightening things up a bit.

John Rose, for a number of years with the Hubbs Hardware Company, has accepted a position withe Purdom Hardware Company, and it is understood will go on the road for the latter firm.

A new wholesale crockery firm has been formed in London, John Dromgale, J. Collamore and two others of W. J. Reid & Co.'s old staff being interested in the new enterprise. Mr. Dromgale was with the Reid people for forty-two years.

The Vulcan Company, which some time ago purchased the plant of the William Malloch Company, intends going into the manufacture of furnaces, stoves, elevators, etc. As yet, however, the concern has not got in full running order.

Certain parties in this city are considering taking over the Mann Brass Works, which went into liquidation some time ago. There should be a good thing in this for any one desirous of going into special lines of manufacture.

Hon. Adam Beck's scheme for augmenting the city's water supply by means of artesian wells, is likely to make good. He has contracted for the sinking of a dozen wells, and if they turn out all right the city can have them at cost; otherwise Mr. Beck stands the loss. It is to this scheme that is due the defeat of the by-law submitted to the ratepayers by the water commissioners on Jan. 4.—F. J. Y.

CHATHAM.

January 12.—The new City Council, with Mayor W. H. Westman in the chair, was inaugurated yesterday. The new Mayor's inaugural address was a comprehensive document, extremely optimistic in tone, and dealing with industrial growth and economy in civic management, a large number of important innovations and reforms being suggested. Incidentally, Mayor Westman urged upon the Property Committee the consideration of a by-law to govern sanitary plumbing and sewage matters.

J. C. Wanless, the hardwareman, was on Monday evening reappointed one of the city's representatives on the Board of Health, an office which he has now held for several years.

The new city mail delivery system is to be inaugurated on Wednesday morning of this week. Local hardwaremen have rather missed a chance in not booming letter boxes, door plates and similar devices in connection with the new system. For a short time a couple of Englishmen located on Centre Street had this business pretty well to themselves, having left their cards at all the houses.

J. C. Wanless has been advertising letter boxes lately, and reports doing a brisk business. To one property owner he disposed of no less than 40 boxes in one order. A great difficulty in connection with the business lies in the fact that it is hard to secure a supply of letter boxes, many of the Detroit wholesalers, according to Mr. Wanless, having fewer in stock than he has himself. There has been a great rush for them on the part of the public.

In business sections there are to be three mail deliveries daily. The system, however, will be more a convenience to residents in outlying districts than to merchants in the centre of the city.

The Retail Merchants' Association are to hold their annual meeting on January 19, when officers will be elected for the ensuing year. It is expected that the presidency this year will go to a hardwareman. Quite a number of important matters are slated for discussion at the meeting.

Business latterly has been rather quiet, chiefly owing to bad roads. At the present moment, with quite a heavy snowfall, there is promise of sleighing, which would help business immensely, bringing the farming people into the city.

Frank Crump, formerly of Campbell & Crump, tinsmiths, left this week to take a position with the Preston Metal Roofing Company.

J. W. Husband, the Wallaceburg hardwareman, is spending a month in Hamilton.

Beginning with January 21, Ridgetown merchants will close their stores at 6 o'clock every evening, Saturdays excepted. This is a notable advance in early closing, and the time, following the busy Christmas season, is opportune for making the experiment.

The close of 1908 marked the retirement of J. C. Shaw, head of the J. C. Shaw Hardware Co., of Wallaceburg, from that town's municipal life, in which he has played a conspicuous part for years. During the past year Mr. Shaw has capably filled the Mayor's chair.

C. G. Elliott, Comber, contemplates purchasing the premises, owned by R. O. Y. Ainslie, which he at present occupies, and had secured an option.

W. H. Goodhue, the new proprietor of the hardware business at Ridgetown, formerly carried on by J. A. Beattie & Co., has arranged to secure the store in the McKinlay Block, occupied by John Grass, on March 1. An arch will be cut between the two stores, both of which will be occupied by Mr. Goodhue.

Clovis Desmarais, formerly of Stoney Point, has opened a general store at Staples, and is adding a full line of hardware and stoves.

Harry Flowers, of Regina, Sask., formerly of J. C. Wanless' staff, is spending a vacation with friends here.

Solomon Huff, of Stephens & Douglas' sales staff, who was injured in a runaway nine weeks ago, was able to leave the hospital last Wednesday, and is now getting about with the aid of crutches.

New machinery was recently installed in the Wallaceburg Brass Works for the

manufacture of metal rings for gem sealers.

Geo. Mahler, of Chatham, and Harry Mahler, of Dresden, have entered into partnership with John Tolmie in the basket manufacturing business at Dresden. New premises have been secured in the Hicks Block, and it is intended to enlarge the business.—W. E. P.

FORT WILLIAM.

January 11.—The building permits of 1908 reached the highest mark ever attained by the city, and place Fort William third in the Dominion for building growth. The total value of permits issued was $1,552,000, covering 424 buildings, of which many are costly and substantial business blocks. The largest single permit was taken out by the C. P. Ry. Co. for the working house on Elevator D, and following this came the Cuthbertson block, on the corner of May St. and Victoria Ave., the hospital and the Presbyterian church. The Board of Education has spent $79,000 on school buildings, and the Sisters of St. Joseph have erected a large boarding school on Arthur Street, at a cost of $25,000. Of the most important business buildings besides the Cuthbertson block are the Murray building, on the opposite corner of Victoria Ave. and May St., and business blocks built by John King & W. S. Piper, D. Laidlaw, J. Enzer, Graham & Horne, J. & T. M. Piper, John Morton, W. J. Ross, H. Harkness and the Herald Printing Co. Dr. T. E. Dean and M. H. Braden also built the new Palace theatre. Of the public buildings the hospital cost $75,000 and the Presbyterian church $65,000. The city has also erected a new building in the West Ward, for fire hall and police station, at a cost of $14,000. The list of permits does not include the work of the Grand Trunk Pacific Ry. on their property which is incorporated in the city, and where they have commenced work on the first unit of their big elevator, which will cost over a million dollars.

The city has double-tracked all that portion of the street railway that runs through the principal business section of the town, and have paved the streets with asphalt block paving. Under the advice of their experts they have used the girder rail, which has a groove in the rail itself for the flange of the wheel, and this has met with some criticism, owing to the difficulty experienced in keeping the track free from snow, which forms a line of ice in the groove. While considerable difficulty has certainly been experienced in keeping the cars running over this girder rail during the recent snows, it is claimed that this type of rail is the best possible for paved streets.

The agreement just entered into with the C.P.R. for further exemption for taxation will involve a large expenditure in the city by the company, and will mean an immense amount of structural steel being used here in the next few months. Under this agreement the company will pay $30,000 per year into the city treasury for the next fifteen years and will build two steel swing bridges, one across the Kaministikwia river, and one across the McKellar river at an estimated cost of $700,000, these two to be completed in eighteen months. In addition to this the railway company has acquired over 300 acres of land upon the islands at the mouth of the river, to which these bridges will give access and they purpose erecting an immense coal handling plant there which will employ a large number of men, both in construction and operation.

Among other industries which are likely to materialize this year is a shipbuilding yard and graving dock, which will also be located upon one of the two islands, in the delta of the Kaministikwia river.

Interior of W. R. Burke's Hardware Store at Gainsboro, Sask.

The Prairie Provinces

Emerson & Fisher, St. John, May Establish a Branch at Saskatoon—Hardware Store at Gainsboro.

SASKATOON.

January 2.—A let-up in business is expected now that the holidays are over. Previous to Christmas a very good trade was done at the stores and merchants have every reason to feel grateful that the year, opening as it did, has ended so prosperously.

The Western Plumbing and Heating Co. have taken up their quarters in the new cement block erected by them on 20th street west. The building is two storeys, with a basement where goods will be stored. The ground floor is utilized by the offices, show-room and workshop. The firm reports business very good. The new quarters give them much more room for the display of goods and a bigger business may be looked for. The first floor of the building has been divided into suites of rooms, which the company will rent. The first floor is now being finished by the contractor. The building is heated by steam.

F. M. Sclanders, the commissioner of the Board of Trade, has returned from a trip to Montreal and St. John, N.B. While in the east Mr. Sclanders interviewed a number of wholesale merchants and manufacturers in the interests of the board. He is confident that several manufacturing concerns will locate here during the present year. Emerson and Fisher, one of the firms interviewed, will probably locate here at an early date, as they are anxious to establish distributing points for their goods. This city they think would suit their purpose very well, located as it is on three lines of railroads. The future of Saskatoon, Mr. Sclanders thinks, never looked so bright.

GAINSBORO, SASK.

January 2.—The accompanying illustration shows the interior of the hardware store of W. R. Burke, in Gainsboro', Sask. Mr. Burke is an energetic young hardware man who in the course of some four or five years has succeeded in building up an exceptionally good business in that western town.

R. C. Chown, of the W. W. Chown Co., Ltd., Belleville, called at the Toronto office of Hardware and Metal on Wednesday. Mr. Chown reports trade good and says large orders have been received from dealers in Eastern Ontario, for hand-made sap buckets, a specialty made in their tin shop.

British Columbia

Favorable Building Indications at Vancouver—Metal Men Dine—Masonic Temple for New Westminster.

NEW WESTMINSTER.

January 9.—The Masons of this city have plans ready for a large new temple. It will be two stories in height, frame, and of pleasing architecture. The cost will be in the neighborhood of $20,000.

VANCOUVER.

January 9.—Weather that the householder would call "the plumbers' delight" is now here. It came with a rush last Monday, and all week the thermometer has been close to zero. The result has been that numerous water services were frozen up and plumbers have been kept very busy trying to bring relief to the people affected. It is not realized just how much water is necessary to metropolitan life until something of this kind happens. It is even more so than in those sections where the proverb is quoted, "You never miss the water till the well runs dry." The plumbers, however, do not relish this rush of business. Not that they do not mind making a little money but the larger firms especially are busy with contracts and they were busy anyway. Frozen pipes mean that contract work must be set aside for the time being.

With a record above all others for the past year in building, the first week of the new year starts in with very favorable indications that 1909 will not be behind. During the past week the value of permits issued was $74,170, a very good showing at a time of year when building is supposed to be off. Not only that, but plans are being prepared for several large blocks. One firm, Parr & Fee, have placed before the building inspector plans totalling a value of $250,000. The largest of these is for an hotel for Bauer & Harrison, to cost $150,000, and will be located at the corner of Howe and Hastings Streets, just across from the new post office. It will be 70x120 feet, seven stories high. The Banfield building at the corner of Bute and Melville, will cost $20,000, and will be used for rooming purposes. Another similar building will be built by Gordon & Campbell, at the corner of Hornby and Dunsmuir, to cost $25,000. Douglas and Thorley will build on Granville, at an expenditure of $20,000. The Fuller block will cost $15,000, while the Godson building at $50,000, and improvements by F. Filion at $15,000 give a large total for a fine start for the year.

The Master Sheet Metal Workers' Association, of which R. C. Hodgson, of Hodgson & Stearman, is president; H. A. Slater, vice-president; A. P. Stewart, secretary, and F. W. Cunningham, treasurer, held its second annual dinner at the Irving Hotel. The courses were described in terms of the trade as follows:—Galvanized goose with coppered spuds; crimped turkey with cranberry solder; and corrugated potatoes with swedged peas. Toasts were responded to by the following members and guests:—Our Country, E. S. Wilband; Our Association, S. N. Jarrett; The Officers, Mr. McLeod; Our Guests, H. A. Slater and S. N. Jarrett; The Ladies, Messrs. Crawford, Morrison and Grill.

NELSON.

December 26.—The first electric smelter for the treatment of zinc to be established on the continent has been started in this city, the initial operation proving a success. It has been in construction for the past year, but is now producing spelter and lead, silver bullion from mixed zinc-lead ores. Frederick T. Snyder, of Chicago, is the inventor of the process, while the manager of the Canada Zinc Company is Robt. Irving, a number of local men being interested. The plant represents the expenditure of about $125,000, and five years of experimental work in the development of the method. Owing to the great value of the system in enabling ores to be worked that would not otherwise pay a profit, the Provincial Government has assisted the enterprise to the extent of $20,000, and the result is already apparent in the increase in the values of the properties carrying mixed ores of zinc. This new plant also saves the copper in the ore as a copper matte and is a departure in the smelting of ores in the use of a current of electricity in place of a blast. This enables the zinc to be saved in the smelting of any ore. In the blast furnace, the blast burns the zinc. The electricity is generated at Bonnington Falls, on the Kootenay, where there is an immense amount of power available.

Nelson has the honor of having the first works of its kind on the continent, although similar plants have been in operation in Sweden, where the treatment of ore by electricity has met with a high degree of success for about three years. A small experimental plant was established at Vancouver, but the plant at Nelson is the first to be established on a commercial basis. In Sweden conditions are extremely favorable to this method of treating ore, as electric power can be secured for $5 or $6 per h.p., while at Nelson the price of city power is $30. One of the problems which the promoters of the works here had to face was to reduce the cost of power, and to do this a system has been worked out by which only about half the power is required to operate as would be used in similar work in Sweden. The success of the Canada Zinc Company will revolutionize mining in British Columbia, in fact, one cannot realize just what it will mean to the vast number of low grade properties in this province.

B. R.

January 9.—Hamilton Byers, manager of the Ashdown Hardware Company, has gone on a visit to Calgary and district. James Lawrence, who was formerly in charge of the Nelson branch, has returned here and will relieve Mr. Byers during his absence. Mr. Lawrence has been in charge of the Ashdown Hardware Company's store at Winnipeg.

VICTORIA.

January 2.—The holiday season is now a thing of the past. Holiday trade was, on the whole, much better than was generally expected. The weather conditions with the exception of a couple of days, were very good, nice bright shopping days. Owing, perhaps, to a certain extent, to the fine weather and a generally healthy condition of trade, most dealers report an improvement over the year, before which was as welcome as it was unexpected. There were quite a number of neatly dressed windows, especially among the hardware and cutlery dealers. E. G. Prior & Co. had a prettily laid out show of Xmas gifts in carvers, knives, razors, etc. One of the prettiest windows was that of Fox's Cutlery store, who made an especially attractive display of cutlery. The B. C. Hardware Co. and Shore's Hardware Co. had also bright, attractive windows.

Work will soon commence on the construction of the large surface drain from the end of the present corner of Cook and View Streets, to the sea shore, near the cemetery. The work will call for an outlay in the neighborhood of $45,000, and will be the most expensive portion of the system to be installed under the scheme provided for in the recent by-law authorizing the expenditure of $150,000.

With the thermometer very much nearer the zero mark than it has been for over sixteen years, Victoria is this week in the grip of a very severe blizzard. With the glass at 6 above and the wind about 50 miles an hour from the north, weather conditions are very far from normal. The plumbers have been kept very busy attending to frozen pipes of which there are very many. The skate dealer has had to get his dusty packages down from the shelves and hand them out to the eager skater, so "'tis an ill wind that blows nobody any good." The coal and wood dealers and the hardwareman with anything in the shape of a stove finds himself rushed filling orders. Cold weather may look good to the Easterner, but not so to old Victorians.—W. B. C.

DAWSON, Y.T.

January 9.—Patents have at last been received by S. A. D. Bertrand, superintendent of public works in the Yukon, for a road grading machine which he invented two or more years ago. The machine has been used in this country with great success. The machine comprises two cutters or shares set at equal angles and distances from the centre line, with a divided axle having an eccentricity between its pivotal point and supporting wheels, a lever being rigidly attached to each half of axle, the means being suitable for attaching said cutters or shares to said axle. There are two grading shares or cutters, crank axles and carrying wheels therefor, said shares converging toward one another from the front to the rear of the machine, and journaled on said crank axles, levers secured on said axles and whereby said shares may be raised or lowered, and a draft connection attached to the forward portion of the shares. The grading shares can be lowered or raised independently of each other. The forward end of the frame and shares may be tilted, the whole giving a machine adjustable to almost any kind of roadway, and providing for the overcoming of obstacles met with in the work.—C.E.

Store Cleaning Time

The Christmas rush is over and hardware merchants will find the next month the most opportune time to make those changes in their stores which they have probably been contemplating for some time.

It will pay you to get your store in good shape before the Spring rush commences.

If you want a new show case or counter and wish to dispose of your old one, first write out a brief description of it, insert in HARDWARE AND METAL and you will no doubt find some dealer between Halifax and Vancouver who is looking for a chance to buy at a reasonable figure the very articles you wish to sell.

Do you want to buy a new desk? A "want ad" will find some dealer who is re-arranging his store and is anxious to dispose of such a desk at a bargain price.

Have you a set of tinner's tools for sale?

Do you wish to sell some old shelf boxes in order that you may replace them with new ones?

Have you a screw cabinet, a wire cloth rack, a rolling step-ladder and all those fixtures which make your store look neat and enable you to give your customers quick service?

There are a hundred little services our "want ad" department can perform for you.

Rates (payable in advance)

2c. per word for 1st insertion.
1c. per word for subsequent insertion.
5c. additional each insertion when box number is required.

Hardware and Metal

Write or phone our nearest office.

MONTREAL TORONTO WINNIPEG

CONDENSED OR "WANT" ADVERTISEMENTS.

RATES.

Two cents per word first insertion; one cent per word subsequent insertions.

Five cents additional each insertion where box number is desired.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost must accompany all advertisements. In no case can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

RULES FOR COPY.

In addressing replies care of HARDWARE AND METAL don't fail to give box number.

Replies addressed to HARDWARE AND METAL boxes are re-mailed to advertisers every Monday, Wednesday and Friday.

Requests for classification will be followed where they do not conflict with established classified rules.

Orders should always clearly specify the number of times the advertisement is to run.

All "Want" advertisements are payable in advance.

AGENCIES WANTED

Manufacturers of hardware lines both at home and abroad watch our paper each week. If you want to secure the exclusive agency for any line for the whole Dominion, for a Province or for your own city or town you will find a Want Ad. will put you in touch with the right firm.

WE WANT TO SELL YOUR GOODS Canadian and American established firms wanting resident selling agents for Canada write A. H. & R., Manufacturers Agents, 1757 Queen West, Toronto. (6)

ARTICLES FOR SALE.

Don't keep any fixtures or tools around your store for which you have no further use. They are worth more to-day than they will a year hence. Don't keep money tied up which you could use to secure discounts from your wholesaler.

BEING in the hardware business and selling supplies to the best makers of maple syrup in a district noted for the purity of its maple products, I solicit correspondence from merchants who want a pure article in this line. D. J. Macnab, Lanark, Ont. (3)

BUSINESS CHANCES.

Does your business need more money? Would you like to secure an active or silent partner? An outlay of 50c. or $1 for a small ad. under the heading, would probably put you in touch with the right man.

PATENT NOTICE The owners of Canadian Patents Nos. 95125, 95126, 96650 and 102647, for improved processes for working silica glass and making articles out of fused silica, and for an improved furnace for working silica, are desirous of finding Canadian manufacturers who will take a license under their patents. The processes are being satisfactorily carried out in Great Britain and a considerable number of articles are being made and sold. Applications for licenses may be addressed either to THE THERMAL SYNDICATE, Ltd., of Neptune Bank, Wallsend-on-Tyne England, or to OWEN N. EVANS, Solicitor of Patents and Expert, Merchants' Bank Building, Montreal, Canada. (5)

BUSINESSES WANTED.

The business of your next door neighbor may be for sale, and you would not know anything about it. The only way to get replies from the trade everywhere, is to advertise in a paper which reaches the trade everywhere in Canada.

TO BUY hardware business, stock $3,000 to $6,000. Give full particulars and terms on which payment may be made. Box 776, HARDWARE AND METAL, Toronto. (3)

BUSINESSES FOR SALE.

Somewhere in Canada is a man who is looking for just such a proposition as you have to offer. Our "For Sale" department brings together buyer and seller, and enables them to do business although they [illegible] of miles apart.

HARDWARE and tinsmith business for sale in one of the finest farming sections of western Ontario. The very best of reasons for selling. Address Box 775. HARDWARE AND METAL, Toronto. (3)

ESTABLISHED tinsmith and furnace business for sale in best building district in Toronto. Have installed 216 furnaces in season of 1907-1908. Reasons for selling, leaving the city. A full set of tools and machines. Cheap rent. Have 25 furnace contracts already signed for 1909 Apply Box 780, HARDWARE AND METAL, Toronto. (4)

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

AGENTS WANTED with good connection with hardware trade to handle a specialty which has had a good sale with hardware men and booksellers and stationers in the United States. The line has already been introduced to the bookseller trade in Canada, but separate agents are wanted for the hardware trade in Montreal, Toronto and Winnipeg. Apply, stating agencies you now have, to Box 779, HARDWARE AND METAL, Toronto. (6f)

WANTED in every town and village, a representative to take charge of the circulation of our various publications:—Hardware and Metal, Canadian Grocer, Financial Post, Plumber and Steamfitter, Dry Goods Review, Printer and Publisher, Bookseller and Stationer, Canadian Machinery, and Busy Man's Magazine. Good financial standing and business connection a strong recommendation. Just the position for a retired business man for his spare time. The MacLean Publishing Company, Limited, Toronto.

WESTERN CANADA HARDWARE MARKETS

Corrected by telegraph up to 12 noon Friday, Room 511, Union Bank Bldg, Winnipeg.

Added to the holiday dulness the Canadian West has been battling with the coldest snap in ten years during the past week, and, consequently, things have been somewhat quiet along the lines of regular trade. Stocktaking is about finished in the retail houses, and returns are being made up. Wholesale houses are jogging along filling small sorting orders, but really putting in an extremely quiet time.

Although in regular lines the week has been deadly dull, the West has not been inactive by any means, and some of the announcements of the week are among the most important for many months. At the head of the list probably is the establishment by the Canadian Pacific Railway of a "Grain Traffic Department," which will have jurisdiction from Fort William to Laggan. Thos. S. Acheson, who has for some time acted as traveling freight agent for the C.P.R., is now appointed to the head of this department, and will be known officially as "Grain Agent of the C.P.R." Important questions in connection with grain matters have heretofore been handled by the various general freight agents, now all questions relating to the transportation of grain will be handled by the new department. The step has been decided upon owing to the enormous increase in the business attendant upon the movement of the Western crop. Every year brings new problems in the handling of grain, and it is felt by the C.P.R. that all such questions can best be met by a special department, a department whose entire time, energy and ability will be devoted to the movement of the Western crop. This action on the part of the C.P.R. is a popular one.

Proposed Railway Extensions.

While on the subject of the Canadian Pacific it might be mentioned that at present writing William Whyte, second vice-president of the road, is in the East making arrangements for the work of this year. He is asking for $30,000 000 to be expended upon Western lines. This is a very large sum in view of the fact that the double-tracking is now practically completed, which has been one of the heaviest items in construction work for the past three years. The money asked for is mainly for extending lines that are already begun. Among the new lines or rather extensions that will be pushed this year is the one from Stoughton to Weyburn. It is expected that this line will ultimately reach Lethbridge and in doing so will pass through an exceptionally fine farming section of Southern Alberta, much of which is suitable for the cultivation of fall wheat.

It is expected that some 100 miles of this road will be completed during the present year in order to accommodate the large number of farmers that have moved into the more eastern section of the country, that will eventually be served by this road.

The present year is one that should rejoice the heart of all makers of rails, structural steel and railway supplies generally for all plans are tending in the direction of a most exceptional railway development.

Message Rates Reduced.

The Winnipeg Jobbers' and Shippers' Union have gained a victory that will be much appreciated by all business men. This is a reduction of the night rate on commercial messages to 50c for ten words from Winnipeg to Vancouver. Heretofore there has been no reduced night rate between Winnipeg and the coast, although there has been a rate equivalent to half the day rate from points in Eastern Canada to the coast. Jobbers in Winnipeg have long felt that this was a most unjust discrimination and the announcement of the new rate has been received with much enthusiasm.

During the week the contract was let for an additional elevator at Port Arthur. This elevator will be the property of the Thunder Bay Elevator Company, Limited, and will have a capacity of 1,500,000 bushels. It will be located 1,000 feet west of the Antikokan Iron Works at Port Arthur, and the elevator and the site together will cost, with trackage, $550,000. It will have three unloading tracks and a complete system of nine interlocking pits, each with a capacity of 2,000 bushels, and will be able to unload 200 cars every 10 hours and to load into vessels at the rate of 50,000 bushels per hour. Already the contractors, the Barnet, McQueen Co., of Fort William, have commenced operations on the driving of piles and they are under heavy penalties to have the elevator ready for use on September 15 of this year.

The question of Government ownership of interior elevators is going to prove one of the live issues of the winter. It has already been broached in the Saskatchewan House, and Premier Scott intimated that the Premiers of the three Provinces were seriously considering the matter. He further intimated that if the Provincial Government should undertake such an ownership it would only be as a complete monopoly. This question will also be the piece de resistance at the annual meeting of the Manitoba Grain Growers' Association, to be held at Brandon during the current month.

The matter is a very serious one, and the quieter and more thoughtful of the farmers are very dubious of any good resulting from Government ownership of interior elevators, although all are agreed as to the wisdom of Government (that is Dominion Government control) of terminals. This, of course, is practically achieved at the present time.

Wheat Market Dull.

Although the wheat market has been a dull one all week it has been remarkably strong and towards the end of the week there was a decided improvement in export inquiry. The fact is, Liverpool stocks are small, and though our prices are high, they are nearly 6c under the American. To this must be added anxiety as to the damage done winter wheat by the extreme cold weather and the absence of a snow blanket.

At present it would appear that there are still some 13,000,000 in the hands of Western farmers available for market. Stocks in the interior to come forward are about 18,000,000 bushels. Receipts have been almost nothing during the past week.—H.

Hardware Markets.

The extremely cold weather is having its effect on business, preventing travelers from covering their territory as rapidly as usual and having a depressing effect on retail sales. The outlook is, however, very promising and the wholesale and retail trade alike are in much better spirits than in January of last year. Values are steady this week and there are no quotable price changes of importance.

Price Quotations.

WIRE—Barbed wire, 100 lbs., $3.25; plain twist, $3.40; staples, $3.40; annealed wire, $2.90 base; oiled, 10c extra; bright iron, $3.10 base; brass spring wire, 32c base: plain galvanized, wire, 6, 7, and 8, $3.50; No. 9, $3.10; No. 10, $3.60; No. 11, $3.70; No. 12, $3.30; No. 13, $3.40; No. 14, $4.25; No. 15, $4.75; No. 16, $5.

STARTS ON NEW CATALOGUE.

Revillon Bros., Edmonton, are compiling a large general hardware catalogue and they have engaged Theodore Korb to supervise the work. Since Mr. Korb came to Canada a few years ago from Louisville, Kentucky, where he was catalogue and advertising manager for the Belknap Hardware & Mfg. Co., he has prepared hardware catalogues for several of the largest wholesale houses in Canada, both in the East and the West. Revillon Bros. have put their catalogue in good hands.

PRESENTATION AT WINNIPEG.

J. W. Driscoll, who for over a quarter of a century has managed the local branch of the McClary Mfg. Co., and retired at the end of last year from their services, is an old timer in Winnipeg. He arrived here in 1882 to open the local branch of the McClary Mfg. Co., and has been in charge of the western business of the company since that time.

As an expression of the good feeling existing between Mr. Driscoll and the office, traveling and warehouse staffs of the McClary Mfg. Co., they gathered in Mr. Driscoll's private office and through Mr. McMillan, the accountant, expressed their feelings of regret at the parting with him, and wished him prosperity, good health and long life, and asked him to accept, as an expression of their good feeling and kind remembrance two beautiful and elaborate electric library lamps. Mr. Driscoll replied giving a brief description of the pioneer work of the country, in which he had played an important part during those stirring times of originating trade, and whose energy had been rewarded in the past years by a large increase in the company's western business.

Mr. Driscoll has not decided as to his future plans, but it is understood he will engage in a private enterprise if he does not decide to retire permanently from business, in which event he will remove to California.

SELLING DANGEROUS COAL OIL.

The first information for the sale of dangerous coal oil has been laid by Inspector Earl, of the Inland Revenue Department, against D. A. McIlquhan, hardware merchant, Alexander, Man., who, it is alleged, sold kerosene which caused the death of Miss Raymond about three weeks ago. Inspector Gosnell obtained a sample from the barrel, which flashed at 65 points, twenty points below the required standard.

Your customers want

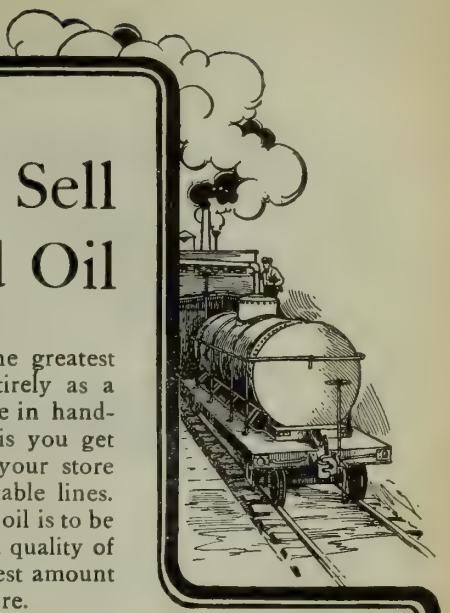
Baling Wire

We have a large stock and solicit your orders.

EDMONTON, ALBERTA

When writing advertisers kindly mention having seen the advertisement in this paper.

You Want to Sell More Linseed Oil



The sale of linseed oil is of the greatest importance to the dealer, not entirely as a source of profit in itself, but because in handling the demand for staples like this you get people in the habit of coming to your store when they want other more profitable lines.

The first step in selling linseed oil is to be sure that you have a bang-up, good quality of oil, so that you will secure the greatest amount of favorable advertising for your store.

SHERWIN-WILLIAMS LINSEED OIL

is as good oil as it is possible to produce. It is made by the "screw press" process which extracts the oil at a lower temperature than is usually employed, so that the mucilaginous matter which generally finds its way into the oil is left in the cake. Sherwin-Williams Screw Press Linseed Oil is vastly superior to the average commercial linseed oil. Every dealer should carry a stock of it. Full particulars and prices furnished upon application.

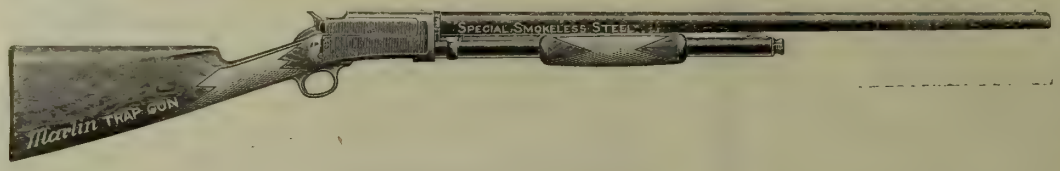
Novelties for the Hardwareman

NEW MARLIN TRAP GUN.

The new Marlin Trap Gun, which has just been announced, is the first special model made by the Marlin Company for trap work, and is a 12-gauge take-down, 6-shot repeater, built with expert knowledge of trap-shooting requirements. It has a hand-made butt-stock of imported



The New Marlin Trap Gun.

Circassian walnut, finely modeled, with the superb London oil finish, and fine checking; a simple, strong and quick repeating mechanism with highly polished operating parts, with a special smokeless steel barrel, claimed to be unequalled in shooting ability.

The high quality of material and workmanship make it handsome, harmonious and distinctive, yet the excessive, expensive ornamentation has been eliminated, allowing the gun to be sold at the moderate price of $38, catalogue list, including a good profit for the dealer. It will also be made with butt-stock of any desired length and drop, at a slight additional charge

A descriptive folder with a large illustration of the gun in colors will be sent in quantity to any dealers who will address a postal card to the Marlin Firearms Co., New Haven, Conn.

ACME FLEXIBLE STEEL MAT.

A line which is growing in popularity is the Acme Flexible Steel Mat, shown in the accompanying illustration. It is

Acme Steel Mat.

made of the best cold rolled stripped steel, thoroughly galvanized to prevent rusting, and is so made that it rolls up like a rug and can be stored away when not in use. It is very sanitary and self-cleaning, and can be used to advantage in private homes, stores, schools, churches, hotels, offices and cars.

PERFECT MAPLE EVAPORATOR.

There is a demand throughout Canada for a small evaporator, at a reasonable price, that will make good syrup, especially for people who have small bushes, say from 150 to 400 trees. People of this kind do not care to buy the large expensive evaporators. They want something that will make good syrup, and not take five years to pay for it. Then again, there are some people who only want to make for their own use. The Steel

Perfect Maple Evaporator.

Trough and Machine Company, Tweed, Ont., have begun to manufacture the evaporator illustrated to meet this want. The body is made of heavy sheet steel and the pan of first-class heavy tinned steel. To make the price as low as possible, they have arranged the fireplace to be lined with brick on both sides and bottom and half-way back on flue. The storage tank is placed at the back of evaporator. Turn the tap and let sap run into the last division, from here it will boil from one division to another until it thickens in the first division directly over the fire, where it can be held by closing slide in first partition until it is finished, when it is taken off through outlet as syrup. It is economical on fuel and a fast boiler for the simple reason that the bottom of the pan is exposed to fire full length, and pan sits down inside of outer lining so cold air cannot strike it on the sides, on the principle of double windows. Circulars giving prices of the evaporator, storage tanks sap buckets and smoke stack will be sent to any dealer on request.

CALENDARS RECEIVED.

Francis Hyde & Company, Montreal, have issued a remarkably pretty calendar depicting a row of Dutchmen enjoying their pipes, and smiling in sweet content upon the world. The calendar also contains some useful information regarding the weights of various materials; Portland cement, brick work and hints on cement using and the making of good concrete.

M. & L. Samuel, Benjamin & Co., Toronto, are supplying their customers with a medium-sized calendar showing a clear view of their new warehouse and office building at the corner of King Street and Spadina Avenue, Toronto. This shows up in white on a jet black background, giving an odd but attractive appearance.

Bristol Fishing Rod Calendar.

The new calendar of the Horton Manufacturing Company, Bristol, Conn., is reproduced in colors from an old study by Oliver Kemp. A healthful, out-door sport, realistically shown, gives to the picture a vigorous aspect that one delights in seeing. A strip of woodland in the background forms an irregular, rugged sky line. The scene is in the late afternoon and the crimson tint of the afterglow is reflected in the still waters of the lake. The calendar is about 29x20 inches. It will be sent by the company on request only to dealers who handle fishing tackle and write on their business letterheads mentioning Hardware and Metal. It will be mailed to others on receipt of 15 cents.

Hammer the Hammer

TRADE MARK IVER JOHNSON

Every house should have burg'ar insurance in the form of a revolver. Protect your home with a revolver that is not only straight-shooting and hard-hitting, but is safe in itself.

Nothing will fire *this* revolver but pulling the trigger. Let it fall, kick it across the room—"hammer the hammer"—*nothing doing* until you pull the trigger.

NO OTHER REVOLVER AS GOOD—NO OTHER SELLS SO WELL.

Think what a great opportunity the dealer has here!

Our advertising in all the big Magazines and Sporting Periodicals has made the Iver Johnson the standard the country over. The absolute tests we invite have convinced people of the superiority of these revolvers. This explains the big sale.

The Iver Johnson goods are never given away as premiums. We never sell by mail where we are represented by a dealer. Send for Dealer's Catalogue, or order of your Jobber.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal waterworks and sewerage systems, railway or mining news, etc.

Industrial Activity.

The Western Milling Co.'s elevator at Calgary, burned at a loss of $50,000, will be rebuilt.

Ahearn & Soper, Ottawa, will enlarge its plant by the erection of a big office building next summer.

The Barnett, McQueen Co. has the contract for building the 1,500,000 bushel elevator at Port Arthur.

It is probable that the C.P.R. will let the contract for the 2,000,000 bushel elevator at Victoria Harbor in a month's time.

The Harold Sanderson refrigerator factory, burned at Paris on Christmas Day, will be rebuilt on a larger scale at that place.

The Provincial steel plant at Cobourg is almost completed. The G.T.R. is putting in a siding to connect with the company's yards.

Again there is talk of John W. Gates building a big steel plant at Toronto or some other place in Ontario to utilize Moose Mountain ore.

The Massey-Harris Co. will increase its capital by $2,000,000 on February 1 to further add to the development of the company's business.

The Dain Manufacturing Co., of Ottumwa, Iowa, have decided to locate their Canadian factory at Welland, and will build there in the spring.

There is a probability of the Dominion Iron & Steel Co. at Sydney, C.B., enlarging its operations by manufacturing lime and the various by-products of its iron plant.

The excavation of the new G.T.P. elevator at Fort William is well under way and plans for structure are in preparation. The Canadian Bridge Co., Walkerville, which has the steel contract, is ready to begin its part of the work when the spring opens.

Railway Development.

The C.N.R. have decided at last to build the line between Port Arthur and Sudbury.

The Delaware & Hudson propose running a branch into Sherbrooke from its Montreal line.

The C.P.R. will probably build a railway from Sudbury to Gowganda, the new silver field.

The construction of the first hundred miles east of Prince Rupert is being pushed and will be ready September 1.

The spending of $5,000,000 on improving and extending the Algoma Central is said to be the intention of those behind the Lake Superior corporation.

The C.P.R. expect to spend $30,000,000 on western lines this year. The Moose Jaw-Lacombe, Sheho-Lanigan, Wilkie-Battle River, Lethbridge-Macleod, and Mowbray extensions will be pushed.

Tracklaying will be commenced immediately by the Great Northern at Keremeos, B.C., as well as on the Spokane-Portland line. Grading is being done by the same road between Allison and Princeton.

Railway surveyors have been working along the line of the Kootenay Central the last summer, between Golden on the main line of the Canadian Pacific Railway and Galoway, on the Crow's Nest branch a few miles west of Fernie. This line will be completed this year.

The Canadian Northern Railway has applied to Parliament for permission to construct lines from Nepigon Bay to the N.T.R., from a point on the Montreal-French River branch to a point on the Hutton branch; from a point on the Sudbury-Port Arthur line to the N.T.R. at Abitibi River; from the C.N.O. line into the Temiscamingue country. The railway also asks for an extension of time on various other lines projected in Ontario.

A report from Calgary states that a progressive campaign of railway building in Southern Alberta is being arranged for the present year. A party of surveyors is now working in the vicinity of Pincher Creek and the lines proposed will keep them busy for three months. In connection with the roads which are to run northeast from Calgary to Saskatoon and other points in the Saskatchewan Valley, the amount mentioned for the guarantee of bonds is $10,000 per mile.

Municipal Undertakings.

The new waterworks tunnel under the bay at Toronto is proving satisfactory.

The Light, Heat and Power Co. again threatens to shut off the electric lights at Montreal unless an agreement is reached.

Victoria has secured $1,200,000 with which to instal a new water system. It is proposed to lay pipes from Sooke Lake, 15 miles from the city. It will take two years to complete.

Public Buildings.

A new firehall will be built on Charles St., Vancouver.

An addition is proposed to be built to the present general post office at Toronto.

The Dominion Government has again taken up the post office building question at Toronto and will likely build near the new station when the viaduct matter is settled.

General Building Notes.

R. E. Sherlock, Lethbridge, will build a $17,000 business block.

Douglas & Thorley, Vancouver, propose to build a $20,000 hotel.

A. Filion, Vancouver, will spend $15,000 on additions to his building.

The Codson Block, a commercial building at Vancouver, will cost $50,000.

The National Finance Co. will erect a $30,000 business block at Vancouver.

The Canadian Bank of Commerce will erect a $40,000 bank at Lethbridge, Alta.

Toronto's building permits for the first week of the new year were valued at $42,500.

Bauer & Harrison will erect a $150,000 steel and concrete hotel at Vancouver.

Victoria's building permits for one day last week totalled $8,000, most small dwellings.

J. G. and E. Y. Lightheart, Vancouver, will spend $15,000 on a block of six dwellings.

Gordon & Campbell will erect a $25,000 store and apartment building at Vancouver.

Plans are being prepared for the erection of a new three-storey hotel at Lethbridge.

The Banfield building, a $20,000 tenement structure, will be erected this season at Vancouver.

The Vancouver Horse Show Association have been granted a permit for a $45,000 structure.

A $15 000 building to be called the Fuller Block, will be erected at Vancouver this season.

Plans for buildings valued at $250,000 are being considered by the Vancouver building inspector.

P. Burns & Co.'s block at Wetaskiwin, Alta., was burned at a loss of $70,000. It will likely be rebult.

Permits numbering 32 and valued at $74,170, were issued at Vancouver during the week between Christmas and New Year's.

HARDWAREMEN ELECTED.

Robert Elliott, of Elliott Bros., hardwaremen and plumbers, Kingston, was re-elected an alderman in the recent civic elections. T. B. Angrove, foundryman, was also re-elected.

J. D. Smith, Baysville, has been chosen a member of his Township Council for another year.

W. H. Jones, Ingersoll, is another hardwareman who has been honored by re-election as alderman for 1909.

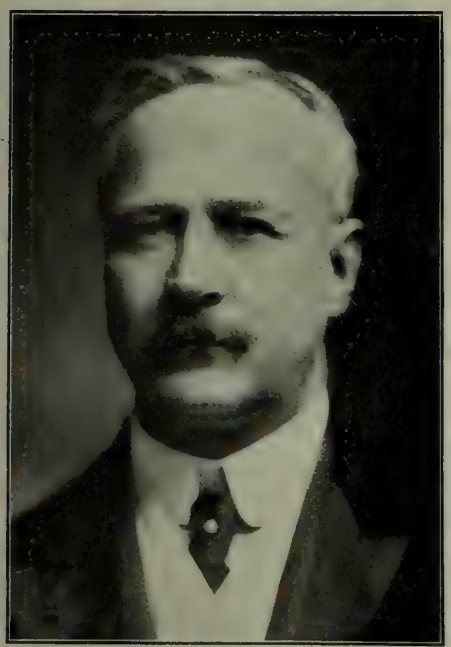
J. C. Shaw, last year's Mayor of Wallaceburg, did not seek re-election.

Mr. R. E. Smith, formerly road foreman of engines of the Canadian Pacific at Medicine Hat, Alberta, Can., has been appointed master mechanic on the same road, with headquarters at Medicine Hat.

News of the Paint Trade

WHITE LEAD MAN ELECTED.

John Hyde, Secretary of the White Lead Association, Montreal, was elected an alderman of Westmount, Montreal's fashionable suburb, in the municipal elections last week.



ALD. JOHN HYDE, WESTMOUNT, Q.

REFINING PETROLEUM.

An ordinary still in a refinery holds 1,200 barrels or more. When it is first heated all the volatile products that pass over are assembled together in a tank, and in this condition are known as "crude naphtha." From this, by redistillation, are obtained gasoline and benzine. It is only when the refiner comes to substances that boil at a much higher heat than water that he runs the stuff off by itself, to be converted into lamp oils.

Sixty hours or more will pass before a 1,200-barrel still is run dry, and long before this the oil that passes over is too thick for burning in lamps. But what next distils over finds other and important usefulness in the domain of lubrication. Beginning with oil that will make a watch go smoothly, it steadily gains in viscosity until, with a degree of solidity resembling that of butter, it will serve for greasing the hot cylinders of locomotives.

Even in the fluid distillates, however, are to be seen solid flakes which are identified as paraffin wax—a product that is separated out in enormous quantities by chilling and squeezing in filter presses, for a great variety of commercial and industrial uses, such as the manufacture of candles, laundry gloss, artificial honeycombs, matches, wax flowers, covers for preserve jars, artificial straws for lemonades and juleps, and waterproof paper.

At last the refiner notes the advent of a curious substance known as "paraffin butter," which is valuable for roofer's wax and as a material for coating fly-paper of the "tanglefoot"

Floorglaze Enamel

We say it is the best solid color floor finish made. We can prove it and so can you, in the easiest and most profitable way possible. Stock a sample order, and see how it brings the customer back for more and do not forget the satisfied customer has lots of friends. Ten shades. Write for color card and prices.

The **Montreal Rolling Mills Co.**

variety. It is just about the stickiest thing on earth—on which account, and also because it has a horrible smell, there is no danger that this kind of butter will ever find its way into the market as a substitute for the product of the dairy.

Finally the refiner opens the still and removes from it the ultimate residue—the last thing left behind, which is coke. It is this black substance, especially valuable because of its freedom from ash, that is the source of our electric light carbons. Thus the series which began with lamp oil winds up with carbon for the electric arc, and between these extremes the by-products have oiled every railroad car in the world, have lubricated the machinery of every factory, have greased the wheels of every wagon, and have given aid in one way or another to every imaginable form of industrial enterprise.

Paint and Oil Markets

MONTREAL.

Jan. 15.—Strong developments in linseed oil and turpentine are the chief features of the paint and oil markets this week. As the result of a mutual understanding a new schedule has been issued by the linseed oil crushers bringing the prices more in harmony with the market in England, while the strength of the market in Savannah has stiffened turpentine locally with the prospect of prices going higher. In other lines there are no changes.

There has been a marked improvement in business, and the year has opened out very favorably. Orders and inquiries are numerous, and the markets are showing considerable strength. Travelers are now out on the road, and prospects look very favorable.

TURPENTINE—With the strength of the markets at Savannah quotations have been marked up 2c, and we now quote 58c for single barrels. Trade has been good, and the market is very firm.

LINSEED OIL—Coming to an understanding crushers have at last put a stop to the cutting that has been going on recently as a new list of prices has been issued, advancing old quotations 4c. This should give a stability to the markets that has hitherto been lacking. Shipments have improved. We now quote: Raw, 1 to 4 barrels, 59c; 5 to 9 barrels, 58c; boiled, 1 to 4 barrels, 62c; 5 to 9 barrels, 61c.

GROUND WHITE LEAD—The demand in white lead has improved. Supplies seem in good shape, and the market is firm and unchanged. We quote: Strictly pure, $5.50 to $6, according to brand; and No. 1, $5 to $5.50 f.o.b. Montreal.

RED LEAD—Shipments are very much the same as they were last week. The market is still reported as being steady to firm. We quote: Genuine red red lead, in casks, $4.50; in 100-lb. kegs, $5; in less quantities, at $6 per 100 lbs.; No. 1 red lead, casks, $4; kegs, $4.50, and smaller quantities, $5.50.

COLORS—Liquid paints are doing well for spring shipments. Stains are moving in better bulk, and altogether trade is opening out well.

PARIS GREEN—Trade has been very good, and the larger dealers are now placing their orders. There is a tendency to ease prices, and business can now be done at 1c below prices published last week. We quote: 1-lb. packets, 50-lb. case, 20½c; ½-lb. packets, 100-lb. case, 22c; 1lb. tins, 100-lb. case, 21c per pound.

WHITE ZINC—The market continues on the dull side with no change in quotations: Dry V.M. Red Seal, 7½c; Red Seal, 7c; French V.M., 6c; Lehigh, 5c; white zinc ground in oil, pure, 8½c; No. 1, 7c; No. 2, 5¾c.

PUTTY—Putty continues to be a good seller. The market is firm and unchanged. We quote: Standard putty, 880-lb. casks, $1.65; in 100-lb. drums, $1.90; bladder putty, 400 lbs., in barrels, $1.90; in 100-lb. cases, $2.05; in 25-lb. drums, $2; 25-lb. tins, $2.05; 12½-lb. tins, $2.25 f.o.b. Montreal.

TORONTO.

January 14.—A decidedly firmer tone is noted in the price quotations this week. Both linseed oil and turpentine have advanced four cents, and the leads are firmer. Eastern markets quote a drop of one cent in Paris green, but the prices of a week ago still rule in Toronto, though a decline would not be a surprise. All jobbing houses seem to have a better feeling one toward the other, and cutting appears to be a thing of the past. There is certainly a better understanding and the price quotations given out are pretty much of a kind.

January is a quiet month for immediate business, but even so there is a much better trading going on than was the case a year ago. Spring orders are good, is the report of all houses and travelers who come in at the end of each week are quite enthusiastic at the prospect of this year's trade.

TURPENTINE—This line has advanced twice since last week. A two-cent advance was made on Monday and a further two-cent rise went into effect on Thursday. Quotations are now 61c for single barrels and one cent less for larger quantities. Two houses have advanced prices only three cents. There is also some new process turps being sold at a little lower prices than what is asked for old process. It will be remembered that three years ago when turp prices were very high a number of so-called substitutes were put on the market and sold as turps. The only kind that was worth while, however, was the turpentine distilled from pine roots. this is called "new process" turpentine.

Not a Minute Too Early

to give serious thought to taking up the "ENGLISH" LIQUID PAINT Agency, for next Spring.

The dealer in your town who has a stock of these well-known, well-advertised and well-liked Paints, will get the trade.

THE PAINT AND THE PRICE

Doesn't it stand to reason that you can sell a lot more moderate priced paint than you can of the high priced kind—providing the quality is as good? That's just the proposition we are offering. We claim that there isn't a prepared paint on the market at any price that is better in quality than MOORE'S PURE LINSEED OIL H.C. PAINT, and that it is even better in quality than most others. It covers better and has greater hiding power. We use only pure linseed oil and the most durable pigments thoroughly ground together. When you begin selling Moore's Pure Linseed Oil H.C. Paint you get the reputation of selling better paint at closer prices than your competitors. That's the kind of reputation which pays.

Get busy after New Business

Go after the man who is building and the man whose house looks like it needed paint. But be careful which **kind** of paint you recommend to him. He's going to paint **again** some day, and he has many friends who may need paint.

If he buys paint from you that peels, cracks and wears off in a year or so, he won't come back to **you** for paint again. And his friends and neighbors are going to **hear** all about that poor paint. **Play safe—take no chances**—sell him

MARTIN-SENOUR PAINT
100 Percent Pure

A paint that you can recommend as strongly as you like and we stand back of you. Martin-Senour Paint is pure—that is why we can stand back of it—why you can stand back of it—why buyer comes back for more of it. Ask for Government investigation and see where it stands in their test of paints.

You want more good profitable paint business, and we want a few hustling dealers. Let's get together. We don't know who or where you are. If we did—we'd send you some welcome news right now. Won't you **tell** us on a postal—who you are and **where** you **live?**

The MARTIN-SENOUR CO., Ltd.,
Pioneers of Pure Paint
Montreal **Chicago**

The Winnipeg Paint & Glass Co., Ltd., Winnipeg

The Maritime Paint & Varnish Co., Ltd., Halifax, N. S.

It would not be surprising if prices went even higher. There is some speculation going on down South, and dealers are able to take care of all that is offering. Stocks are not so great now, as the season's supply is known, and until April, when the quantity of the new season's stock can be gauged, there is likely to be higher prices.

LINSEED OIL—An advance of four cents is noted all along the line. Quotations are: 1 to 4 barrels, 59c for raw and 62c for boiled; 5 to 9 barrels, 58c and 61c; 10 to 20 barrels, 57c and 60c. There has been an agreement reached and an end has been put to the cutting. There are a number of orders on the books for oil at the old figures, but new buyers will have to pay the advanced prices.

PARIS GREEN—Government standard pure Canadian manufactured Paris green is at the prices published last week. Montreal reports a decline of a cent, but so far the local market is not affected. Barrels of about 600 lbs. are at 19½c.

GROUND WHITE LEAD—A firmer tone is noted in both white and red lead. Pure white is $6.25, and No. 1, $5.65; a medium grade is at $5.80. Genuine red lead is still being sold at $4.50, though $4.80 is the quotation of at least one house.

STAINS AND VARNISHES—Prices are unchanged, though there is more firmness noted. With the advance of turpentine quotations may go higher. As yet, however, with the active season still in the future there is no prospect of an immediate change.

PETROLEUM—Still active business is being done. Being a winter line, the sales are frequent and the trading well worth while. Prime white, 13½c; water white, 15½c; and Pratt's Astral 17½c, are still the current quotations.

TAKING STOCK.

A paint stock is one of the easiest to take inventory on. And just for this reason it is quite often not taken. It is impossible, however, for a man to know accurately what is on his shelves and what is not unless he takes a systematic and figurative count. Quite often cans are put back in the wrong place or work themselves behind others, which results in an all out apparent condition of this or that kind when it is really not the case. The man who takes an inventory may also find he is carrying a larger stock than he supposed. Behind the solid line of cans there is often found small cans of stain or enamel which have slipped off the tops of those in front or probably shoved there for general appearance's sake.

For making a spring order the inventory sheet will prove far better than the stock sheet, says an exchange. It will also be a verification for the present totals on the stock sheet. The spring order is the heavy one, but it should not be compiled by a proprietor's eye nor by his stock sheets. There is no doubt but what the overstocked conditions quite often result from just this inaccurate way of assuming totals.

Taking inventory is in a way cleaning house. It means the taking of everything and for everything one must look everywhere. Under counters and shelves, drawers used for something else and out of the way corners are great retreats for stray cans of paint. How they got there nobody knows, still they are constantly found. Cans out of order and in with other colors is a common condition and one that emphasizes the caution against ordering from only a look at the shelf. Often small cans of a specialty received a few years ago, and present poor sellers, are found probably on the top of the top shelf or under the counter. If dusted and placed on the front show case they would sell like hot cakes. As we said above, taking inventory means peering into every corner and nook and looking behind every row and pile, and we venture to say that the inventory taking proprietor who fails to find something misplaced will be as rare as the blue moon.

The easiest way to take paint inventory is to begin with the house paints and work down to the specialties. Every can should be looked at to see if it is the same as those around it. Colors quite often get mixed. When the list is completed and before the extensions are made it should be gone carefully over to see that there are no two of the same kind appearing in different places on the sheet which would mean the cans had been separated. When counting always begin at the top shelves and work down.

SOME PAINT GOSSIP.

Thomas Russell McArthur, head of the firm of McArthur & Co., manufacturers and importers of paints and artists' materials, Montreal, died recently in Montreal from hemorrhage of the stomach.

A great deal of interest will be taken in a series of about twenty cases which will come up before Local Master Bishop at Ottawa, in connection with the Canada Turpentine Company, now insolvent. About twenty men in the capital subscribed to the company's stock, only paying a portion of the amount they subscribed. Among these twenty about $4,000 remained to be paid on their holdings. Then the company went out of business. The property near Barry's Bay was sold for $10,000, while the claim of the bondholders amounted to $11,000 and there were several other creditors to meet. Action has therefore been taken by Mr. Crawford Ross, liquidator, against these shareholders to make them pay up the remainder of their subscription. They are called upon to pay good money on stock of a firm that is already out of business. In nearly every case they are objecting to the payments, claiming that they were led to take stock in the company through misrepresentation and fraud. Then each has special reasons for objecting to the payment. Each of the twenty cases will have to be taken up separately.

is a varnish finish for interior work that will excite the admiration of your painter customers on account of its truly excellent quality. It is especially adapted for hallways, bathrooms, dining rooms, kitchens, window sills, bar fixtures and general inside work requiring a finish of extreme durability. It produces a beautiful lustre over natural, painted or grained woods, and a smooth dull finish is easily obtained by cutting down with pumice stone and water. It dries free from dust in from 7 to 9 hours, is very elastic and will not scratch or mar white.

Cut 10—Outdoor Cabinet

The Bowser will keep your property absolutely safe from gasolene fires and explosions because it keeps explosive gases from forming.

It will increase your profit on gasolene because it stops the usual loss of from 15 to 50 per cent. through evaporation, leakage and waste. It draws new trade because it is placed in front of the store where it continually advertises the fact to automobilists and others that you sell gasolene.

The Bowser costs you nothing because it pays for itself by its own saving of gasolene. Ask us to send Gasolene Catalog 5445. It's free.

S. F. Bowser & Co., Limited

66-68 Fraser Avenue - TORONTO

If you have an old Bowser and want a new one, write for our liberal exchange offer.

The "Railroad" Special

The strongest Wrench made and one that will stand the most severe service because the head and bar is drop forged in one piece from open hearth steel, the screw and jaw deeply threaded and every part is carefully made from high grade material. Fitted with our indestructible iron handle.

Adapted for use in mills, factories, railroads and in any place where a strong, serviceable Wrench is required. Used by the largest manufacturers and railroads in the world.

The most economical Wrench on the market.

CURRENT MARKET QUOTATIONS.

January 16, 1909

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Amatite ROOFING

Needs No Painting

If you had a sample of Amatite in your hand you would see in an instant why it needs no painting or coating to keep it waterproof.

It has a rough surface of *real mineral matter* on the weather side.

It is evident to anyone that it is no more necessary to paint such a surface than it is necessary to paint a stone wall. Stone needs no paint; neither does Amatite. It is strong enough in itself to bear the brunt of rain and wind and sun without a protective coat of paint.

To paint Amatite would be a waste of time and trouble.

Amatite will last for many years without any care whatever. It is made to be *trouble proof* as well as *weather proof.*

A roofing that consists of smooth materials, made to receive a heavy coating of paint, is not a roofing at all—the paint is the real roof. If you are told that certain roofings don't need painting when first laid, don't be deceived into thinking that they are like Amatite. The first coat of paint has been applied at the factory—that's all, and it will wear off in a little while and require renewal.

No paint is good enough to make a durable roof; a thick layer of pitch faced with a real mineral surface, is far better—and that means Amatite. **Free Sample and Booklet**—A Free Sample with Booklet will be sent on request to our nearest office.

Read a Few of the Comments of the Leading London Dailies on the Supremacy of the Ross Rifle at the 1908 Bisley Meet.

"Long range Champion, breaks all records, a rifle of wondrous precision." *London Morning Post, July 16th.*

"Records broken at Bisley. A fine Canadian rifle." *London Daily Express, July 16th.*

"Record scoring with the Ross rifle." *London Daily Telegraph, July 15th.*

"Champion of the year." *New York Herald, July 16th.*

"Performance phenomenal by the Ross rifle." *London Field, July 18th.*

"The new Canadian rifle has made an unexpected and altogether successful appearance." *London Daily Mail, July 15th.*

"Great triumph for the Ross rifle which has beaten all the world's rifles." *London Standard, July 15th.*

"Many experts declare that Ross rifle better than new U.S. Rifle." *Nottingham Guardian, July 17th.*

"An individual triumph, the Lee-Enfield hopelessly beaten." *London Morning Post, July 15th.*

"The Ross rifle achievements were truly remarkable." *London Evening Standard, July 15th.*

"Great victory for the Ross rifle from Canada." *London Daily Express, July 15th.*

"The rifle of the future is the Ross rifle." *London Times, July 16th.*

"A 'plague of possibles' with the Ross rifle." *London Sphere, July 15th.*

THE ROSS RIFLE CO., - QUEBEC

Hardware Store Business Methods.

Price $1.00

220 Pages, Bound in Cloth.

The authors of the articles in this book are for the most part practical and progressive Hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. NINE of the FORTY subjects discussed are:

Rules and Regulations for the Hardware Store.
The Hardware Buyer.
Good Methods in Stock Taking.
Prices and Catalogues.
Collecting Accounts.
The Merchant and His Employees.
Changing Business Conditions and How to Meet Them.
Profit Figuring System.
Starting in Business.

SEND $1.00 TODAY, and the book will be mailed by return.

Not "Just as Good,"
but a GREAT DEAL BETTER

THAT'S the claim we make for Taylor-Forbes Lawn Mowers—that they are better value than any imported machines. WHY? Because all our machines are self-sharpening—cross-bars, girts and shafts being double the weight and strength of any imported machine. Steel plates for cylinders and knife-backs in all our machines are double the thickness of any imported machine All cylinder wings are made of malleable iron—cast iron is used in imported machines. All Taylor-Forbes machines are made with loose half-boxes and permit of quick and easy adjustment, while American machines, being made solid, cannot be adjusted. All wheels on our machines are three times the weight of any imported machine. The highly carbonized flat steel pawls on our machines are vastly superior to the little wrought iron pins used on imported machines.

Don't Wait for Something to Turn Up. Try a "WANT AD."

CARBORUNDUM

Carborundum is admitted to be with the exception of the diamond the hardest substance made and cuts all other abrasives with ease. The crystals are hexagonal in shape and possess a sharpness superior to all other cutting materials.

It is infusible at the highest and insoluble in any of the ordinary solvents.

Carborundum products embrace:—

Crystals
Grains
Powders
Wheels
Cup Wheels
Sharpening
Razor Hones
Combination Stones
Dental Wheels
Axe and Scythe Stones
Oil Stones
Rubbing Stones
Scouring Stones
Slip Stones

In fact every form in which abrasives can be used it has no equal.

Toronto **St. John, N.B.** **Winnipeg** **Calgary** **Vancouver**

¶ The illustration shown on the left is a D. Handle of the prevalent type with its prevalent defects.

¶ From time to time attempts have been made to manufacture a better one, but till recently no effective substitute has been produced.

¶ In the right hand illustration is shown the ONLY and latest effective Split D. ever constructed. The three features worthy of your attention are:

1. The hand grip has the grain of the wood in a lateral position in place of vertically as in the old type of D.

2. The solid drawn steel cap is constructed to cover the ends of the split stem, and also covers the tenoned ends of the hand grip.
This is completed by putting a rivet through the hand grip, the split fork and the solid caps drawing all compactly together, and as there is practically no expansion, or contraction of the lateral hand grip, the whole is held snugly together.

3. It allows of the stem being fixed so that the edge of the grain can be placed vertically, which cannot in all cases be done in the old style D.

¶ This handle is supplied on request in all our Lines without extra charge and are fully guaranteed. Ask your Jobber for them.

Chicago Flexible Shaft Co., 250 Ontario St., Chicago

McDONALD ADJUSTABLE PIPE ELBOW PATTERN

(Patented in Canada and in the United States.)

THE machine illustrated in this circular is designed for laying out pipe elbow mitres. With it the mitre for any angle from zero to 90 degrees for an elbow in any number of pieces can be accurately determined in a few seconds without the use of drawings or sheet metal patterns. For example: If a pattern is desired for a 12-inch, two-piece, 60 degree angle elbow, proceed as follows: Place bevel on sector (see Fig. 1), follow up the vertical line of figures near the right edge of sector, until figure 12 is reached, which represents the diameter of the pipe; then follow the line leading from 12 until it intersects the bevel blade, which will indicate the Fig. 7. Now set the upright scales on the machine to Fig. 7 (see Fig. 2) which will adjust the flexible spline at the top of the machine to the exact mitre required for a 12-inch, two-piece, 60 degree elbow. If a different diameter of elbow is required, unclamp the screws on the horizontal bars (see Fig. 2) which makes it possible to adjust the machine to any desired diameter. Fig. 3 represents the machine when it is set for a 3-inch elbow. The size of the device when not in use is 7¼ inches wide by 18½ inches long. This device is bound to prove a time-saver in any establishment where a considerable number of elbows are made. Assuming a foreman's time to be worth 30 cents per hour, if he saves an average of ten minutes per day by using the adjustable pattern, he will have saved enough money in one year to pay over 100 per cent. interest on the investment represented by the purchase price of the machine. As a matter of fact, any practical sheet metal worker knows that this machine will often save hours per day rather than minutes. There is absolutely no trimming required when a mitre is made by the McDonald pattern. The McDonald Adjustable Pipe Elbow Pattern is guaranteed to do the work we say it will do, and to be strong and durable. With ordinary care it will last a lifetime.

The machine, as represented in this circular, is No. 1, and includes all diameters from 3 to 12 inches. Finished in dull nickel finish. Shipments made f.o.b. New Glasgow for Canadian orders, and Boston for United States orders. The McDonald Pipe Elbow Pattern can be supplied in larger sizes on special orders.

No. 2, including sizes from 6 to 18 inches.
No. 3, from 12 to 30 inches.

MEN WHO SELL THINGS

By Walter D. Moody.

This "Salesman's Blue Book" gives the up-to-date methods of solving the problems which confront the average seller of goods. These practical and stimulating suggestions, written in vigorous and entertaining style, are based on twenty years' experience. It is specially written for Manufacturers, Merchants, Employers, Salesmen and all Sellers of Goods, for it will show them HOW TO INCREASE BUSINESS. The three maxims of this book are—"How to Get Out of the Rut"; "How to Increase the Efficiency of Your Selling Service"; "How to Encourage a Higher Standard of Salesmanship on the part of Your Men or in Yourself." 259 pages. Net, $1.00. By Mail, $1.10.

Why the "Galt Kind" Pays the Dealer——

The high quality of "Galt" Sheet Metal —its features of design and construction —has already established a reputation in every locality where it has been used. There is money in this reputation for the Hardware man who is introducing or selling Sheet Metal Building Goods.

1909 will certainly bring a big demand for Metal Roofing, Siding and Ceiling and Lath, for buildings being built or repaired. Our goods and our advertising make this a demand for the "Galt Kind." Get ready to supply it by asking us at once for catalog, prices and particulars of our proposition.

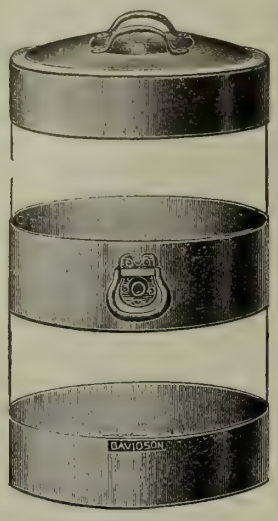
Davidson's Broad Hoop Roll Rim Bottom

Milk Can Trimmings



IN COMPLETE SETS

"Broad Hoop" Pattern—Composed of the following: 1 Broad Hoop Bottom, 1 Cover, 1 Centre Hoop 6 inches wide, 20 gauge, 1 Broad Hoop, 1 pair Cover Handles, 1 pair Side Handles.

Diagram showing how strongly our Roll Rims are constructed

A combination of strength and durability

Our bottoms have HEAVY ROUND ROLLED EDGES which make them doubly durable, and saves all wear and tear to Factory Floors and Waggons.

BOTTOMS ARE CONCAVE and drain to the centre, and are therefore easy to wash out.

THEY DO NOT CORRODE like those which drain to the side.

OUR MILK CAN TRIMMINGS ARE UNEXCELLED for ease of making up, and our Patent Roll Rim Bottom makes a strong, neat and fitting completion to any milk can.

We also carry in stock Tinned Iron, cut to size for milk can bodies, which we can supply promptly.

Diagram showing how strongly our Roll Rim Bottoms are constructed

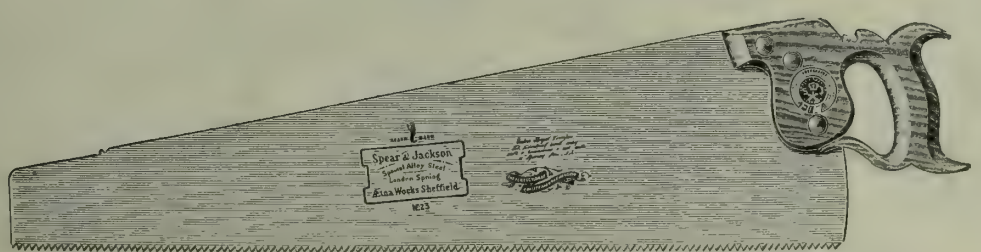
CANADIAN WORKS, 112 Adelaide Street East, TORONTO

LOOK OUT!



¶ Live business men should always be on the look-out for new lines which are going to take on, because by not carrying them they lose trade and reputation.

¶ We recommend them, therefore, to be quickly on the trail of our new No. 23 Handsaw, which has already met with great favour, partly because men wanted a straight back to compare in quality with our 87 and 87A, and partly because we have hit on a mighty good thing in our new alloy saw steel.

¶ There's "just a little something" in it which makes the difference your customers will notice.

The New Way

You can remember
Even in recent years,
How buying was solely
A matter of the goods,
A wrangling o'er this point,
That point—nothing concrete
For your shrewd thought-scales
To weigh.

Mark you, we make
Our product as perfect
As products can be made.
The proof—sixty-one years
At it.
And on a larger scale each year.

But we don't forget
That claims of quality
Fly here and there
Without the kind of proof
We've just given.
Which puts it up to us
To show we have an
Argument there's no
A-getting round—
We mean our
Selling Aids.

Take, for example,
The "Samson" line
Of Milk Can Trimming
A line of goods that
Are very live just now
As far as retailers
Are concerned.

It simplifies the matter
When we say that
We Get the Patents
We Get the Machines
We Get the Men
We Be-Get the Goods.

It clinches the matter
When we say that
To these mighty strong points—
Made into one—
We place that name
"McClary's."
A name known o'er
This continent's top half
Because we've advertised it
With our dollars.
A name that sells goods repeatedly.

So when you buy
The "Samson" line
You do get goods
That have the merit—
All possible advantages,
All features,
All freedom from weak spots.
And to boot
The power of "McClary's"—
The name that makes the sale for you.

Is that not a plan
That appeals right readily:
"To save your selling time,
Quicken your profit-getting"—
Well, it strikes us as hard sense.

Now won't you
Button-hole our traveler
Re "Samson" Milk Can Trimmings —
The very F-I-R-S-T Line?

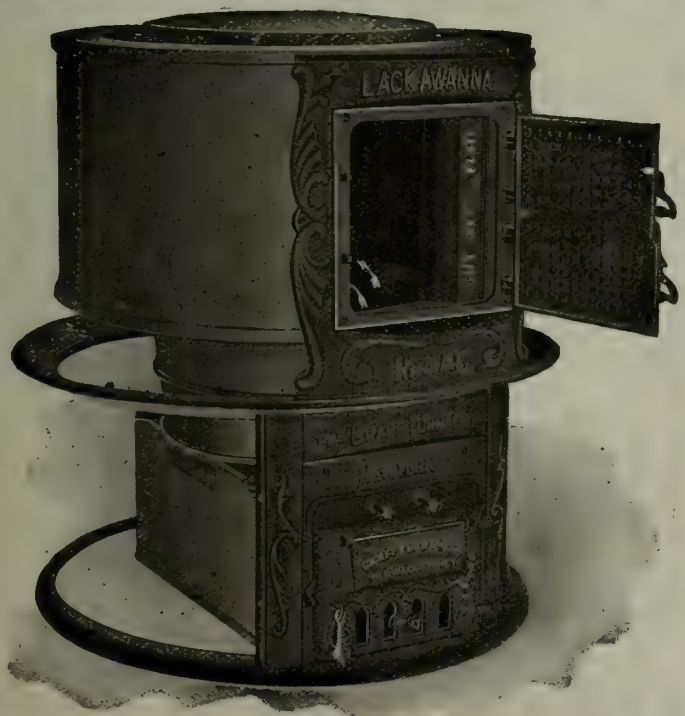
Radiating Surface is Extra Large

in the



Lackawanna Furnace

The flue in the Lackawanna is shaped like a horse-shoe and the air consequently passes up through the radiator as well as around it. Thus an unusually large surface is exposed to the products of combustion, resulting in great fuel economy. When hard coal is used a cut-off plate is inserted on one side of the flue, compelling all smoke and gases to pass entirely around the flue to the smoke collar in the side—avoiding all possibility of smoke and gases going around one side only as is often the case where the draft is expected to divide equally at the front and go both ways.

How a Hardware Clerk Reached the Top

The Stirring Career of Walter H. Cottingham, Who Has Just been Elected President of the Entire Sherwin-Williams' Organization—Characteristics of a Prominent Canadian, Now One of the Foremost Figures in the Great Industrial World—A Record of Inspiration and Enthusiasm.

The story of how men in any enterprise climb the ladder of success is always instructive and inspiring. It is full of human interest that quality which arouses the indifferent to action, the struggling to renewed effort, and the successful to greater achievements.

Not very many years ago Walter H. Cottingham was weighing putty and nails in the retail hardware store of McKee & Davidson, in Peterboro; a few days ago he was elected president of the entire Sherwin-Williams' organization, one of the greatest business concerns on the globe. At fifteen years a junior clerk; at forty-three occupying the highest office that the directors of an establishment which ranks foremost in the paint and varnish world of two countries, can bestow.

How did he rise? He had no influential friends, wealthy relatives or other levers sometimes used to give men a lift, and Walter H. Cottingham is a Canadian, of whom his countrymen are proud. As a boy he possessed enthusiasm and the ability to see the essential things in whatever he undertook. He had the gift of imagination. The most renowned leaders in any line of endeavor have been visionaries, and Mr. Cottingham always dreamed of future prominence and power with all the enthusiasm of youth. To-day he pays tribute to imagination as an integral element of success. "Factories of air must precede factories of brick and warehouses exist first in the imagination" is one of his business maxims. He has traveled the rough road to eminence alone and is a splendid example of that class who always excel the self-made man. He believes there are two things which largely determine a man's success in business—his knowledge of his own business and an intimate acquaintance with human nature.

The little village of Omemee, a few miles north of Peterboro, was his birth place. His first job was with the hardware store in Peterboro where he spent one year, after which he was attracted to Montreal with its greater field of operation. It was during the first five years of his residence in that city, working with a commission merchant in hardware and paints, that he gained preliminary knowledge of the paint business and its great possibilities, as well as his comprehension of human nature.

In 1887, Mr. Cottingham launched out in the troubled sea of commerce as an independent maker of gold paint and other specialties. So modest and unostentatious was this undertaking that scarcely a ripple was raised on the commercial ocean. Failure and shipwreck were predicted for him and his enterprise. He received lots of advice, by far the larger part of which was to stay on shore where it was at least safe. Columbus got the same advice continuously from the day he stood the egg on end until he picked up the seaweed floating off the American shore. In the new firm Mr. Cottingham was manufacturer, salesman, buyer and most of the incidental positions that go to make up the staff of a manufacturing concern. But he wasn't so poorly equipped as a casual glance at his establishment or a Dun report would have one believe. He made his own paint; he knew what was in it, and, consequently, could sell it without misgivings. His stock of enthusiasm was inexhaustible, and his faith in himself and his proposition strong and unwavering.

Walter H. Cottingham in his Office.

At the age of 25 years (1891) Mr. Cottingham was a miniature captain of industry. The following list of industries in which he was at that time interested will show what good use he made of his time. He was proprietor of Walter H. Cottingham & Co., makers of paints and varnishes; senior partner of Cottingham, Robertson & Co., package dyes and dye stuffs; proprietor of the Windsor Chemical Co., makers of gold paint and gold specialties; proprietor of the St. Lawrence Canoe & Boat Co., makers of and dealers in canoes, boats and fittings; director of the Non-Chemical Laundry Co. It then occurred to him that he was getting his eggs distributed in too many baskets, so he gathered them all into one basket and devoted his energy to watching that basket. He saw the increasing demand for paint and varnish, so the Walter H. Cottingham Co. grew and flourished under his now focused attention. They secured selling agencies for the leading English and American paint and varnish makers, among them the Sherwin-Williams Co. This arrangement had not been long in force before the energetic manager saw the opening for the manufacturer in Canada of high-grade goods, and following up this idea he induced the Sherwin-Williams Co. to join with him in manufacturing their goods in Canada. The firm name was now changed to Walter H. Cottingham Co., Limited, and a subsidiary company was organized for the manufacture of varnish, it being called the Cottingham Varnish Co. The goods, which, under his new arrangement he had undertaken to make and sell were the highest priced in the United States, and higher than any other brand sold in Canada. The outlook

was not bright to any save the proprietor. As his goods were higher priced than others the question of high cost was an obstacle to be surmounted, and he and the few travelers which he had gathered around him tackled it with so great avidity and enthusiasm that, at the end of a few years, that obstacle no longer existed. He talked to his small force as he still does to the 250 salesmen now in his charge, with such a warmth of enthusiasm and optimism that they became more capable travelers and better men. Mr. Cottingham imparts enthusiasm to others as the sun warms that which it shines on. Roads that look steep, hazardous and absolutely impassable, lose their terror after a five-minute talk with him. The angle of vision changes and barriers that appeared to be made of stone turn out to be only "near-stone" and not in the least formidable.

In 1896 the Walter H. Cottingham and the Cottingham Varnish Companies were merged with the Sherwin-Williams Co., and they had by this time become such important factors in the Canadian paint and varnish market, that under the new arrangement, the proprietor was made a director of the Sherwin-Williams Co. and manager of the Canadian business. In this capacity Mr. Cottingham displayed the keen business acumen and power of organization that marked him as a general of commerce. He immediately attracted and held the attention of the home office at Cleveland, and, when the business demanded a man who could properly guide and aid its further growth, all eyes were turned to Montreal. In 1898 Mr. Cottingham was appointed to the general managership of the entire company, to which, in 1903, was added the title and responsibilities of vice-president. A few days ago, at a meeting of the directors held in Cleveland, he was appointed president of the entire Sherwin-Williams' organization, both in the United States and Canada, Mr. Williams retiring from the presidency and being made chairman of the board.

During the 12 years which Mr. Cottingham has guided the destinies of the Sherwin-Williams Co. their operations have largely increased, and he, while still a young man, has the gratification of knowing that the reputation and sales of his company are yearly growing under his guidance.

If there is one characteristic of Mr. Cottingham that stands out above the others, it is his great personal enthusiasm and power of imparting it to others. In this enormous business, whose field is practically the world, it is necessary that organization and economies be thoroughly understood and applied, but the growth and general health of the business is largely a matter of enthusiasm. This and the habit of concentration are the two chief forces which have brought Mr. Cottingham into a place of prominence and responsibility which resembles in all respects the one he had in mind when wrapping nails into neat bundles or measuring out putty in Peterboro in 1881.

Mr. Cottingham's love and admiration for his native land has not diminished during his stay across the imaginary line. He still holds his Canadian citizenship among the greatest of his possessions and derives the keenest pleasure in furthering the Sherwin-Williams Co.'s business in Canada. The Montreal plant is but one of many of his charges, but Mr. Cottingham considers it more than any other branch of his business the child of his own brain and activity.

It may be mentioned that when Mr. Cottingham began business in Montreal nearly twenty years ago, he gave an order for advertising to Hardware and Metal, and the advertising has never been out of the paper in all these years. Not only that, but on several occasions since he has taken up his residence in the United States, in addressing organizations and business gatherings, he has drawn special attention to Hardware and Metal as an excellent example of what a business man's paper should be in educating not only the retail merchants but the wholesalers and manufacturers to better methods and higher standards in the building up of business.

Mr. Cottingham left Cleveland this week, taking passage on the Teutonic for England, where he will visit the London factories and offices of the Sherwin-Williams Company.

Quebec Firm's Twentieth Anniversary

Mechanics' Supply Co. Entertain Their Customers and the General Public—Dinner to Employes Follows An Inspection of the Various Departments.

An event of unique character took place at Quebec on Saturday, Jan. 4, when W. H. Wiggs, the proprietor of the Mechanics' Supply Co., held a reception between the hours of 3 and 6 o'clock. The guests were received by Mr. Wiggs, assisted by Guy H. Simpson, manager, and the various heads of the several departments, including W. C. Teakle, of the office staff; Walter Wilkinson, of the mechanical department; Allan Wyse, of the electrical department, and Capt. Arthur Evanturel of the heating department.

During the afternoon an orchestra rendered a choice selection of music, and refreshments were also served throughout the afternoon.

The reception was held to mark the twentieth anniversary of the foundation of the business by its present proprietor, under whose direction it has steadily expanded until to-day it is one of the most modern enterprises in its field in the whole Dominion.

As the guests were conducted through the different departments by the members of the staff, who pointed out the utility of the various articles. The electrical department in particular claimed attention, where the latest lighting appliances and novelties of this electrical age were represented.

Another department which drew forth admiration by its richness and beauty was a suite of bath rooms, finished in quartered oak and marble. The stove and mantel rooms also attracted considerable attention. The company's stock is carried in the main building and two big warehouses connected with it, the stock comprising a full line of light and heavy hardware, machines, engines, heating and lighting supplies. The appointments and finish of the building, the provisions made for the

Mechanics' Supply Co.'s Store Building at Quebec.

comfort of employees and patrons, and the modern methods, conveniences and system adopted to carry on expeditiously and accurately the large business are thoroughly modern.

After the reception the members of the staff were entertained at dinner by Mr. Wiggs, when a very pleasant time was had.

After the usual toast to the King, the health of their host and hostess, accompanied with the names of Mr. and Mrs. Simpson, was proposed. Mr. Wiggs replied in a very feeling manner and gave some reminiscences of his long and happy connection with the hardware trade of Quebec.

Allan Wyse replied to the toast of the Ladies, after which Capt. Arthur Evanturel, one of the oldest employees of the company proposed the toast of the evening, the Mechanics' Supply Company, in which he stated that it gave him great pleasure to attest to the friendly treatment accorded at all times to the employees by Mr. Wiggs, and the example he set them.

Mr. Wiggs replied in French, thanking the other heads of the various departments and saying how essential it was to the success of the firm that everyone contribute their best efforts and thus mutually add to their own welfare.

There were also speeches by Mr. Simpson and by other leading members of the staff. At the conclusion of the dinner Mr. Wiggs showed some splendid lantern travel views. The whole event will be remembered as one of the red-letter happenings in the history of the company.

W. H. WIGGS, QUEBEC.

authorities on a Canadian liner from Halifax, with the result that it took the correspondence from ten to twelve days to arrive at its destination.

George Ross, chief post office superintendent, spoken to about the matter, said one or two specific instances of delayed letters might arise at any time, but all mail matter marked via New York certainly went that way, in fact, all Old Country letters were despatched by the swiftest route possible. The post office employes made a thorough study of the hour of sailing of each ship, her average speed, the number of days usually required for her to cross, etc. All mail went by the quickest route, and everything, particularly in the winter time, was forwarded by New York rather than from Halifax, unless a very slow vessel was leaving the metropolis, and a Canadian leviathan would beat her out.

The Old Country mail sent almost daily from Toronto, alone weighs from 800 to 1,000 pounds, and unless a letter or packet was marked especially to go by a Canadian steamer, all matter was hurried forward by the speediest possible course. This rule, Mr. Ross declared, was invariably followed, and, if any merchant or manufacturer would furnish a concrete example of undue detention, he would have the complaint fully investigated.

Group of Staff of the Mechanics' Supply Co., Quebec.

OLD COUNTRY MAIL DELAYED.

Some complaints have reached Hardware and Metal from manufacturers and business men to the effect that mail matter for England marked via New York was evidently sent by the postal

NOTES.

Wm. McQueen, city clerk of Vancouver, will receive tenders for waterworks supplies—brass work, galvanized iron pipe and lead pipe—for 1909 up to February 10.

You've got to know your business to know how to sell. You'll always find this knowing how is the greatest thing in the world. It's not alone in the dollars that it puts in the till—in the bonds that it stacks up for you in the vault that it counts—it's in the splendid, superb, magnificent, deep-down satisfaction that it gives you when you do a thing and do it right. That's where know-how is greatest—and where it pays best.

Retail Hardware Association News

Official News and Correspondence on Association Matters Should Be Sent to the Secretary of the Ontario Retail Hardware Association, 10 Front Street East, Toronto, and Matter for Publication in This Department Addressed to the Editor of Hardware and Metal, Toronto.

ONTARIO CONVENTION PROGRAM.

Tuesday, Feb. 9.

10.30 a.m.—Executive Committee meeting.

2.30 p.m.—Convention (business session).

8.00 p.m.—Convention addresses by R. R. Williams, hardware editor Iron Age, New York, and Robert Munro, Montreal, followed by "Question Box" discussion.

Wednesday, Feb. 10.

9.00 a.m.—Visit Greening Wire and Canada Screw factories.

1.30 p.m.—Convention (business session.)

8.00 p.m.—Complimentary banquet tendered by hardware jobbers and hardware manufacturers of Hamilton.

Thursday, Feb. 11.

9.00 a.m.—Visit Canadian Shovel, Canada Steel Goods and Canadian Drawn Steel factories.

1.30 p.m.—Convention (open to travelers, etc.) Short addresses by C. C. Ballantyne, Montreal; A. A. Briggs, London, and others, followed by "Question Box" discussion.

8.00 p.m.—Complimentary theatre party, tendered by hardware jobbers and manufacturers of Hamilton.

Friday, Feb. 12.

Hamilton manufacturers invite visiting retailers to visit the blast furnace and other hardware and kindred industries.

ATTENDANCE WILL BE LARGE.

From all parts of Ontario reports are coming that hardwaremen are preparing to attend the Hamilton convention on Feb. 9, 10 and 11, and many new members are enrolling so that they will not have to go through this formality after they arrive at Hamilton. This should be generally done in order to avoid delay as the officers will be busy men at the convention and will not have much time to spare for answering questions or doing work which ought to have been done beforehand.

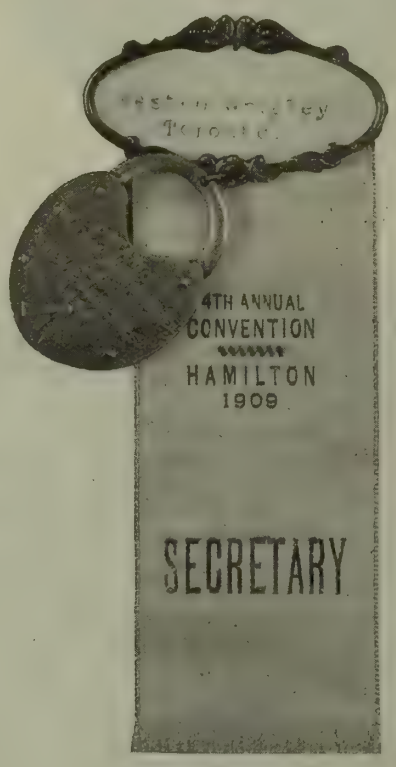
"I shall endeavor to make it convenient to attend. The subjects as outlined, if properly discussed, should be of advantage to all who attend," writes M. S. Madole, Napanee.

"Last year it was impossible for me to attend and I felt as though I had lost something that could not be found. This year I purpose making everything give way for those three days at Hamilton," is how M. W. Howell, Goderich, expresses himself.

And similar letters from the Ottawa River district, from New Ontario, from the Niagara and Bruce Peninsulas indicate that the secretary was right in laying in an extra supply of badges and preparing for at least two hundred visitors.

The badge, as will be seen from the illustration, is a handsome one, besides providing a means of identification and enabling each delegate to introduce himself to any other he may desire to meet.

The printing of names on the badges will entail considerable labor, however, and hardwaremen planning to attend the convention should forward the name of the member of their firm who will represent them at the convention. If the membership fee of $3 is forwarded with the delegates' name to the secretary before the convention, delay in having the name printed on the badge will be avoided.



The Convention Badge.

In every respect this convention will be greater than anything yet held in connection with the hardware trade in Canada, and this means a lot of work for the executive officers, none of whom are salaried officials. If every member does what he can to make the work easy and to make the convention successful and profitable to the members it is safe to predict that Hamilton will be a green spot in the memory of Ontario hardwaremen for many years to come.

The Hamilton jobbers and manufacturers aren't saying much, but they are sawing wood and the entertainment of the delegates will be in the hands of men who have a record for hospitality.

Let every one who plans to go to Hamilton do some thinking beforehand. Is there any question to put in the "Question box?" Can any suggestion be made to make the Association more helpful to the trade. Think over this and then send the secretary the membership fee and the name to print on the badge.

EXHIBITORS AT CONVENTION.

Twenty-two manufacturers have now made arrangements to make exhibits at the Waldorf Hotel, Hamilton, during the coming retail hardware convention and about half a dozen others are considering the matter. In next week's paper a list of about 25 exhibitors will be given.

The arrangements at the Waldorf Hotel are that most of the exhibits will be made in the large sample room adjoining the parlors in which the convention meetings will be held. In addition to this several large rooms have been engaged by other manufacturers for exhibits and some space will also be given up to displays in the large corridors of the hotel.

The hotel will certainly be a great centre for hardwaremen during the convention.

SPECIAL RAILWAY RATES.

Arrangements have been made with the railways belonging to the Eastern Canadian Passenger Association, covering the territory in Ontario east of and including Port Arthur, Sault Ste. Marie, the St. Clair and Detroit Rivers.

Delegates must purchase a one-way ticket to Hamilton and ask the agent for a standard certificate, which, when properly filled in and signed by the secretary of the association at Hamilton, will allow the holder a return ticket free, if 300 or over attend, or for one-third usual fare if 50 or over attend.

Tickets will be obtainable on Feb. 5 with return privileges up to Feb. 15, three days before and three days after the convention, Sundays not included. A representative of the railways will be present at the convention Feb. 10 and 11 to sign certificates. Only tickets sold at places where the rate is 50 cents or over will be counted. Any other information can be secured from the ticket agents.

HAMILTON'S HARDWARE INDUSTRIES.

For many years Hamilton has been known as the "Ambitious City," but a change has been suggested to that of the "Hardware City," on account of so many factories being located there connected with the hardware trade.

The Hamilton Steel and Iron Company, with its recently enlarged plant, comprising blast furnaces, rolling mills,

etc., is the centre around which many industrial wheels revolve and with the exception of rods for the manufacture of wire and nails the chain of activity from the ore to the finished nail would be complete. A further enlargement of the plant is contemplated and in the natural evolution arrangements will be made to produce the rods required by Hamilton industries. In addition to the steel plant Hamilton's list of hardware and metal industries includes:

Hamilton Bridge Works.
Gartshore Thompson Pipe Foundry.
International Harvester Co.
Westinghouse Electric Co.
Union Drawn Steel Co.
Canadian Drawn Steel Co.
Canada Screw Co.
B. Greening Wire Co.
Canadian Hart Wheels Co.
Brown-Boggs Co.
Gurney-Tilden Co.
Burrow, Stewart & Milne.
D. Moore Co.
Bowes, Jamieson & Co.
McClary Mfg. Co.
Canadian Shovel and Tool Co.
Canada Steel Goods Co.
E. C. Atkins & Co.
Gurney Scale Co.
Ontario Lamp & Lantern Co.
E. T. Wright & Co.
Dowswell Manufacturing Co.
Canada Wire Goods Mfg. Co.
Dominion Belting Co.
Allith Manufacturing Co.
F. W. Bird & Son.
F. F. Dalley Co.
Meakins & Son.
Meriden Britannia Co.
Canadian Steel and Wire Co.
Pittsburg Perfect Fence Co.
Frost Wire Fence Co.
Hamilton Cotton Co.
Hamilton Powder Co.
Hamilton Brass Mfg. Co.
Consolidated Hardware Mfg. Co.
Canadian Sewer Pipe Co.
Skedden Brush Co.
And at Dundas there are:
Bertram Engine and Machine Co.
Dundas Axe Works.
Pratt & Whitney Tool Co.

It is safe to say that all of these manufacturers will welcome any delegates to the convention who visit their factories.

"MADE IN HAMILTON" SHOW.

Stanley Mills & Co., Hamilton, are preparing to hold another exhibition of the processes of manufacturing the various classes of goods made at Hamilton. A year ago an exhibition of this kind was held and another "Home Industry Week" is arranged for from Feb. 3 to 13. In many of the exhibits machinery will be in operation, showing the actual manufacture of the goods.

Stanley Mills & Co., as many hardwaremen know, are a departmental store concern with a separate and distinct hardware store, the founder of the firm having originally been a hardwareman. The store adopts modern advertising and window display methods and aims to maintain prices rather than draw trade by cutting. One of their big drawing cards has been the offering of a 5-cent return electric railway fare to all within a radius of about twenty miles. This, of course, tends to draw trade from hardwaremen and other dealers in nearby towns and cities, but Hamilton hardwaremen have not yet been heard to complain of the firm as a price cutter.

The firm has invited the members of the Association to visit their store during the convention and the offer will likely be taken advantage of by many who will be glad to have a nearer view of the up-to-date methods of a hardwareman who has branched out and developed a large mail order business.

Unpleasant and Unprofitable Experience

An Ontario Hardware Dealer Gives His Experience With a Manufacturer of Metal Roofing—Wants the Subject Discussed at the Coming Convention.

Editor Hardware and Metal,—My attention has been called to an article in a recent issue of Hardware and Metal under the heading "Neglecting Profitable Business in Metal Roofing," and I do not think that so undeserved a scolding should be let go by unnoticed by the hardware trade.

Speaking from an experience covering more than a quarter of a century in the Hardware business with which tinning has been associated, I can safely say that there is no line less profitable and more annoying than this same metal roofing business, and when you chose to insert a letter from a manufacturer in which he advises his salesman to cut out the hadrware dealers you could not possibly have chosen a more illuminating epistle or have searched out a firm more antagonistic to the retailer and all that his interests mean. Year by year I do business with many manufacturers and jobbers and find that the general tendency is toward mutual assistance and co-operation, but if this spirit has been in any way destroyed in the metal roofing business I can safely say with the fullest proofs that the Pedlar people, whom you quote, have been most notorious in the promotion of such a downfall.

There is a well-known rule to the effect that an honorable wholesaler or manufacturer will not sell to the public directly if there is any representative of the retail trade to be found as a medium. The firm mentioned, however, pays no attention to such traditions or codes of honor and stands ready at any moment to put the knife into people who have been their agents for years. During the past year I had an especially pointed illustration of this fact. This metal roofing company had sold me thousands of dollars worth of goods in past years and I was the duly accredited agent in my town; their agent called on me one day and asked if there were any prospects in the neighborhood to work on and I readily gave him several, you will therefore judge of my surprise when I learned that he was canvassing vigorously through the country round about and informing the people that he was not selling through me. I at once sought him out and demanded an explanation and was informed that I would receive a commission on these sales. The result is easily stated when I inform you that I never received one cent of commission, that goods were sold to old customers who specified that the order must be put through my firm, and that this agent sold eavetrough to the farmers at wholesale price, telling them that they could get it erected for one cent a foot. Furthermore this agent tendered against us on a job of sheet metal lining, knowing that we were trying for it, and when we attempted to find him and remonstrate with him he hid himself from us so successfully that we were never able to obtain an interview with him. We laid the matter before the house, even going to the president over it, but were met with evasion and equivocation at every turn so that we became completely disgusted. As correspondents this firm, which is so quick to jump on the hardware trade, is notorious, in our office at least and we could relate instances—with illustrations—which would make good material for a funny column if it were not for the disagreeable nature at the time of happening.

Then again you state in your article that metal roofing pays the dealer ten per cent., but we do not think that you would like to earn your salary attempting it. Here is a little object lesson. The Pedlar people advertise in all sorts of journals that their "Oshawa" shingle can be had for $4.50 per square; the farmer seeing this comes to his dealer and leaves an order for shingles, the Pedlar people sell the shingles to the retailer for $4.25, out of which he has to pay freight and cartage, amounting in our case to 17 cents per square. Where does the ten per cent. come in? Of course the immediate answer of the Pedlars is that you must charge the farmer with the freight, but that is not the way any other line of goods is sold and in our experience the farmer absolutely refuses to pay the freight. We have sold hundreds of dollars worth of these shingles in this way simply as an accommodation to customers who had a fancy for that line. Articles advertised at a certain price in newspapers and journals cannot be readily sold at an advance by retail dealers or the public gets an idea that there's an ethiopian in the fuel. The matter is one for which we have found a remedy and I would not hesitate to communicate it to anyone interested. I hope to see that it is fully discussed at the coming Convention and the facts well aired throughout the province.

The Pedlar people are desirous of pulling wool over the eyes of hardwaremen, and failing in that they have gone after a bunch of small contractors who are willing to supply farmers with metal roofing at cost so long as the builder gets the job of putting it on. Rest assured that all the roofing manufacturers are not in the same bunch for some of them will be found to be all that one might desire, but a difficult situation has been created and it will take determined action to successfully fight it.

There is much more that might be said on the same subject, but what I have written here can be proved beyond the cavil of a doubt and I would consider it a pleasant task to demonstrate that proof to anyone interested.

Yours very truly,
AN ONTARIO HARDWARE DEALER.

Views on Insurance Rates

Claims Underwriters Have Lived Up to Their Agreement—City Must Go Farther and Complete Pumping Capacity of the High Pressure System—A Further Reduction Then—What the Key Rate is.

By C. McNaught.

Toronto's long looked for high pressure system is now an accomplished fact. The tests made were passed upon as satisfactory by Mr. Howe, expert of the Canadian Fire Underwriters' Association. In making his report, Mr. Howe points out that the system is only fully effective while the present set of pumps are both in good working order; the disablement of one would seriously reduce the pressure—the vital requirement in the efficiency of all high pressure systems.

The necessity for increased fire-fighting equipment was most completely demonstrated by the conflagration which wiped out a large part of the wholesale and light-manufacturing district of this city in April, 1904, and insurance companies were compelled to reckon with a serious "conflagration hazard."

The immediate effect was the imposition by the companies of a surcharge or "conflagration extra" of $1.00 to the then existing rates in the congested district—a district in which buildings containing large values were closely grouped together and which were subject to complete annihilation should a fire get beyond control—as it was self-evident that the city's water service and fire-fighting equipment were utterly inadequate to cope with such a condition.

Risk Rated on Its Merits.

After the adjustments of the many losses occasioned by the conflagration were completed, the city was "specifically rated" by the underwriters,—that is, each individual risk was rated on its merits under a schedule rating system.

This rating system superceded the "conflagration extra" rates. It is made up of certain fixed charges for items, such as "defects of construction," "class of occupancy," etc.; and to these various charges is added the "key rate" of $1.00, which is based largely on the efficiency of the fire-fighting equipment.

Thus we come to the consideration of the conditions existing immediately after the fire of 1904. Merchants and insurers of all classes affected by the increased rates, while, in most cases, recognizing the justice of the action taken by the insurance companies, immediately began to co-operate with the underwriters in their effort to remedy the condition—and the grant for the high pressure system and the betterment of the fire-fighting equipment was the result.

After conferences between the city and the underwriters an agreement was entered into under which it was agreed that the "key rate" was to be reduced a certain definite amount for each of the several items of improvement that should be completed by the city—aggregating 50c in all.

More for City to Do.

When the city has completed the pumping capacity of the high pressure system, as promised, it will, with the other items now completed, have effected improvements which entitle it to a reduction of the key rate from $1.00 on contents and 75c on buildings to 75c and 50c respectively, in the congested district.

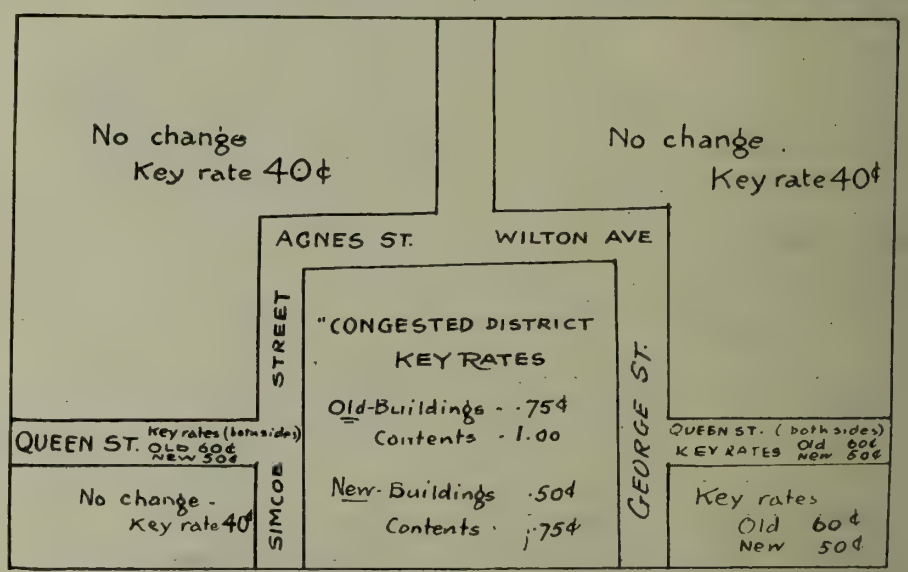
The underwriters, however, in endeavoring to show their absolute good faith and also in just recognition of the improvements completed and to be completed, immediately granted the reduction of 25c in the "key rate" in the congested district and have gone farther than their agreement with the city by also reducing the "key rate" of the intermediate district from 60c to 50c. They regarded the improved conditions as warranting this reduction.

Therefore, from January 1, 1909, all buildings in the congested district now rated on a key rate of 75c, contents $1, and all buildings and contents in the "intermediate" district now rated on a key rate of 60c, will be re-rated on "key rates" of 50c and 75c in congested district and 50c in the "intermediate," these reductions to affect all policies placed or renewed subsequent to Jan. 1, 1909. No refund for reductions in rate are to be granted on existing policies placed or renewed prior to January 1, 1909, unless they are cancelled at short date rates and replaced at the new rates.

This action on the part of the underwriters I think is only fair in view of the fact that when the rates were increased the extra rate was not charged on current policies and was only collected on renewals or new business placed after the increase went into effect.

Some Suggestions.

As a final word I would like to take this opportunity of urging insurers to have their ratings carefully gone into by some competent insurance man. I feel sure that in many cases suggestions for improvement and betterment of the insurers could be offered, which would lead to reduction in rate, altogether aside from the reduction granted because of the high pressure system, etc.; and, equally as important; would result in a lessening of the chance of fire.



Cut showing the exact effect of recent changes in the Insurance Rates in congested districts.

NOTES.

The Aluminum Corporation, Conway, North Wales, has gone into the hands of receivers, the principal creditor being Lloyds Bank. A statement has been issued by the bankrupt company, which says that its failure is principally due to the heavy decline in prices of aluminum. Several years ago the manufacture of aluminum was quite profitable, but owing to keen competition values have steadily declined, and it is claimed that that at the prices at which this material is now being sold there is little or no profit in its manufacture.

A. L. Bach, for six years in the cutlery business at New York and twelve in the same line at Solingen, Germany, has established himself as a buying agent and wishes to arrange to act for Canadian firms.

Electrical Supplies a Paying Side Line

Novelties Sell Well During the Holiday Season—Improvements in Lighting Apparatus—Why Hardwaremen Should Handle Electric Dry Culls.

A prominent feature of the recent holiday season trade among hardwaremen was the extended display of electrical goods, and the evident success attending the venture will no doubt encourage further efforts in this direction, not only as regards occasional trade, but for general selling throughout the year. The number of electrical articles of a useful character now upon the market have so increased that it would be a wise move for every merchant to carry an electrical department. Apart from the common necessities of electrical lighting such as lamps, fixings, etc. —and with the spread of electrical lighting the demands for these goods are increasing—there are such articles as portable lamps, torches, illuminated watch stands, cigar lighters, which can be made good sellers at any time. And ,n addition there is an evergrowing array of household utility goods such as sad irons, coffee heaters, radiators, etc., which can by simple adjustment to the wires of a house save the labor and trouble now associated with the use of the ordinary articles.

In one way and another the employment of electricity is creeping into every house, and it behooves merchants to be abreast with the times. The changes that are continually being made in the constituents of the lamp and the great variety of fittings, give good scope for carrying a wide stock, and at the same time extend the selling range of the dealer. There is a profit in electrical goods that should not be ignored. In carrying an electrical department the hardwareman should not fail to make a good display of his lines.

A purely electrical window should be run occasionally. An attractive display can be made of lamps, globes, fittings, household articles and various self-contained battery goods, such as we have before mentioned. The district should be circularized to the effect that a comprehensive stock is carried of useful as well as ornamental articles.

In this department, as well as in the other ones of the hardware store, the goods should not be made to sell themselves. The merchant should have an intelligent selling campaign. Tools used by electricians should be carried, a good lookout kept for any new contrivance placed on the market that is likely to prove a good seller.

Useful Tool for Electricians.

A useful floor-board lifting tool has recently been invented. Great trouble is often experienced in lifting a swoolen floor board to get at an electric wire without breaking the wood. This tool, which is so small that it can be packed into any tool bag, it is contended, will lift the most obstinate board without recourse to prising, cutting, or levering. The tool comprises a cross-piece of metal which spans the board to be raised. This cross-piece carries two small wood screws, while at either end is another small screw fitted with a foot at the bottom, and a small handle at the top similar to a screw-jack. All that is necessary to do is to place the tool across the board so that the extreme jack-feet secure a purchase on the adjacent board on either side. The inner screws are then driven into the board to be lifted, to secure a firm purchase. By twisting the two miniature jacks at either end, the bridge of the tool is raised bodily for about two or three inches, lifting the board with it. No damage is done to the board, and two little plugs will finish off the small holes left by the screws.

New Idea in Lighting.

Among the various attempts to improve the incandescent gas mantel, a new ingenious invention seems to have surmounted many of the defects noticeable in the ordinary mantel which being of a cotton foundation is fragile and perishable. This new invention is totally different in design from the present mantel. The principle of the invention is based upon the obtaining by fusion at a very high temperature radiant and unchangeable filaments composed of various oxides, which are so fashioned as to possess the appearance of solid glass or porcelain. There is a flat circular crown, from which projects three rows or rods of needles. The mantel thus resembles a brush made of stout bristles, and, although comparatively thin, they are of great strength and will not readily break when placed between the thumb and finger. The mantel is placed over the Bunsen gas flame in the usual manner by means of a special support, the flame being projected into the centre of the mantel by means of a special gas injector in the burner. When the filaments become incandescent they shed a brilliant light, the intensity of which varies according to their number and length. This mantel, it is said, is capable of withstanding extreme differences of temperature, is perfectly rigid, and is unaffected by draughts, wind, or rain. By the introduction of certain coloring oxides in the manufacture of the filaments any tint of light can be obtained, while the mantel can be made up in a variety of forms useful for decorative purposes. It can be used with any gas illumination and with portable lamps. It is economical in gas consumption, and lasts from two to three years.

Electric Dry Cells.

The numerous uses electric dry cells are now put to makes it advisable for most hardwaremen to stock this line as well as carry a general assortment of electrical supplies. Dry cells, for instance, are used for door bells, fire and police alarms, telephone services of every description, ignition service on motor cycles, automobiles, launches, gas and gasolene engines, running of toys, experimental work of all kinds, medical batteries, etc., and as the man who wants a door bell or some wire usually drops into the hardware store to get them, he should be able to get dry cells there also.

Then automobile owners are large buyers of dry cells and gasolene and the hardwareman who is on a main road ought to be prepared to supply the demand from this class. And many farmers nowadays have engines which require batteries, so the hardwareman who sells fence wire or tools can develop a trade in electrical supplies if he cultivates the trade.

In many towns the telephone office is the only place where a stock of dry cells is kept, but as telephone companies use only a low-ampered battery the batteries which they carry in stock are not the best ones for ignition service and the man who frequently pays an extraordinarily high price is seldom getting what he expects.

The hardwaremen in the United States and in the Old Country realized this long ago and although they handle electric dry cells only as a side line they have found it to be a very profitable one. The leading jobbers in the States have established a separate battery department and are selling thousands and thousands of batteries to the retail hardwaremen, and Canadian jobbers are also giving attention to the possibilities of the line.

Until recently electric dry cells were not manufactured to good advantage in Canada, but Electrical Specialties Limited, have opened a large plant at Toronto and are making a point of assisting the dealers who handle their goods by supplying, attractive show cards, window displays, and other advertising matter, through their jobbers, Lewis Bros., Montreal, or from their Toronto factory direct.

The types in which X cells are made are of standard size, namely, No. 6, 2½x6 inches; No. 7, 3x7 inches; No. 8, 3½x8 inches; and the makers claim that tests have shown that X. cells are superior to any imported product.

Tungsten Electric Lamps.

The Canadian General Electric Co., Toronto, are marketing a new incandescent lamp giving a very white light, made in the regular bulb form in sizes from 25 to 250 watts. The smallest size of 25 watts gives a 20 candle-power light of great brilliancy, more than equal, it is claimed, to the ordinary 56-watt bulb, giving a 16 candle-power light. The saving in the current is, therefore, over 100 per cent. with 25 per cent. more light than a 16 candle-power carbon lamp, and figured out on a basis of two hours use each night gives a total of about $3 per bulb during the year. The electric lighting companies have decided not to push the sale of this bulb and there is a good opportunity for hardwaremen, therefore, in bringing it to the attention of users of incandescent lamps. The 25-watt bulb sells at 90 cents, but its saving in power makes it a cheap light in the long run. Instead of having a single carbon filament, it has a cluster of hairpin loops, thus more than doubling the lighting capacity.

Enthusiasm in the matches of the Montreal Wholesale Hardware Hockey Association is increasing, and promises to work up to fever heat before the schedule is through with. Four matches have been played up to now, the Canadian Fairbanks Co. leading with two victories and no defeats. Lewis Bros. and Starke-Seybold have each won 1 and lost 1, while Caverhill, Learmont Co., and Frothingham & Workman have each lost 1.

DANGEROUS COAL OIL IN THE WEST.

It is now some three months since the people of Western Canada were first startled by a series of accidents resulting from the use of dangerous coal oil. The worst disaster was that in Swan Lake, Man. As a result of which several lives were lost but about the same time there was a series of mishaps all, or nearly all of which, were traced to the purchase of oil from one wholesale oil firm in Winnipeg about the same date. The authorities have conducted an examination into the circumstances without definitely locating the responsibility. It is, of course, the height of absurdity to suppose that a score or more of retailers deliberately adulterated their oil, and no one who knows anything whatever of the character of the men in charge of the wholesale firm in question believes for one moment that they have been guilty of any wrong conduct in connection with the matter. At the same time the fact remains that much loss of life and property resulted from the sale in Manitoba of dangerous coal oil—oil that does not come up to the standard required by law. A thorough investigation which will determine the responsibility for the sale of this oil to the retail trade is urgently required in the interests of the general public and the country dealers.

At the present time proceedings have been instituted against a hardware man in Alexander, Man., for the sale of kerosene which was responsible for a death, and it is said that other prosecutions of the kind are to follow. These prosecutions will probably lead to a judicial investigation which will determine the responsibility, but in the interests of the retail trade we would suggest that the proper course is not to prosecute individual dealers, but to conduct a thorough investigation into all the facts of the case. The retailer who has sold coal oil without any reason to doubt that it is of the standard required by law will suffer particular hardship if he is to be prosecuted for accidents for which he is not responsible. For the protection of the retail trade a searching investigation is urgently required.

PROFITS IN METAL ROOFING.

A correspondent in this issue complains that he has found metal roofing business unprofitable, his figures verifying those of another hardwareman who has been buying from the same manufacturer and who has also been selling roofing at $4.50 when the cost laid down was $4.42. The other dealer referred to states that on corrugated iron and siding he gets 7½ per cent., but after paying freight the goods net him 3⅛ per cent. Then he adds: "Can it be wondered that the retailer does not handle metal roofing when he can sell other roofings at a better margin and with less trouble in doing the business?"

It is by no means peculiar that the two men who complain of the business being unprofitable have both been customers of the same manufacturer who, by the way, does not cater to the trade of hardware dealers but, instead, advertises direct to the consumer and charges a higher price to hardware dealers than competing concerns. For instance, the same quality of goods sold by the Pedlar People at $4.50 was sold last season to retail customers at $4.10 by another manufacturer and the price will be even lower than this for the coming year. This shows a margin of ten per cent. in 1908 (less freight) and when a sale of from 30 to 75 squares is made for a barn roof the profit is a fair one, particularly when the sale is made from a catalogue without risk in stocking the goods. And retailers who continue to deal with manufacturers who do not try to protect the trade only help to make it harder than ever for both retailers and the manufacturers who sell through the trade.

Hardware and Metal knows many hardwaremen who made more than ten per cent. on their metal roofing business last year. One man who carries a stock buys in carloads and is able to sell the goods delivered at what competitors must charge freight on. He does not cut prices, however, but takes all the profit he can get by reason of having his goods in stock. The same dealer does not confine his efforts to metal roofing, but also buys prepared roofing in carlots, freight prepaid, and has thus been able to make a margin of from twenty to thirty per cent.

There seems to be no doubt about the ability of some hardware dealers to make a fair margin of profit out of metal roofing, and, consequently, Hardware and Metal urges the trade to endeavor to prevent this line slipping out of their hands entirely.

Much depends upon supporting the manufacturers who are protecting the trade, but the methods of going after the business are also important. Hardware and Metal will deal with this in succeeding issues, and in the interests of the trade asks readers who have been able to develop a fair trade in their district to outline the methods they have adopted. Communications on the subject will, of course, be treated as confidential.

AN ODD WANT AD.

An odd advertisement appeared in Hardware and Metal last week, a hardwareman, D. J. MacNab, of Lanark, Ontario, soliciting correspondence from merchants in other parts of the country who want to secure a pure maple syrup. Mr. MacNab supplies sap buckets and other sugar bush supplies to the farmers who own the trees and he is in a position to secure large quantities of the pure article, which he feels he can guarantee to other dealers unable to secure pure syrup in their own districts. In securing customers for the sugar bush owners he is doing them a favor while also turning an honest penny for himself in a season when trade is none too brisk.

The incident illustrates a point Hardware and Metal has frequently made, that retail merchants should always be on the lookout for special lines to develop in connection with their own trade. This is where money is made, as it is an addition to the regular business and, if taken up in seasons when regular trade is dull, the returns for the time spent is clear profit. Then, too, anything the merchant does to increase the income of the farmers in his locality is bound to result in more business for himself.

The want ad. pages of this paper offer innumerable opportunities for the wide-awake merchant. They are read every week by clerks, merchants, travelers, jobbers and manufacturers in

every city, town and village in Canada. Half a dollar spent in a want ad. brings the message to the attention of thousands of possible buyers. When opportunity knocks at your door, therefore, be careful to remember the key which unlocks the door to let the welcome visitor in.

SETTLING SMALL ACCOUNTS.

The first of the year is the great settling-up time in the business world, and in the process of squaring accounts and meeting obligations our relationship are so interwoven that in order to secure the best and most satisfactory results it is necessary for all to join in the move. If it is the duty of the retailer to wipe out his account with the wholesaler and the wholesaler with the manufacturer, it is surely the bounden obligation of the customer to clear his indebtedness with the local merchant. This is a matter to which not enough serious attention is given, with the result that persons are often careless and think that the merchant can wait. This is a grave mistake, and, if only those who have been accommodated, would stop to think, they would not ask a local tradesman to tarry longer for his money. If a merchant is kind and considerate enough to extend credit to a customer, surely the least that the latter can do, in return for this favor, is to make an honest effort to settle at the first of the year, in full, or, if that is impossible, then in part. How much happier things would be all around if a united, consistent effort was put forth to carry this out. These accounts are in many instances small, but in the aggregate they amount to a good deal and their payment means that the merchant is able to satisfy the financial demands made upon him.

This is so important and far reaching a question that clergymen have felt impelled to speak out on it in the interest of the community and the good of their people. For several years Rev. Canon Davidson, rector of Peterboro, and one of the leading members of the Anglican body in Canada, has on the first Sunday of each new year delivered an impressive sermon on this subject. At the services in his church on Jan. 3 he again took occasion to refer to this subject by urging prompt attention to all financial obligations, particularly small ones. He dwelt upon our inter-dependence in this particular, and how each could contribute his share in making 1909 bright and prosperous if this system was only followed out. He said that the discharge of this duty was a most important and far-reaching one. It should be done for itself and also because it had the effect of enabling others to meet their obligations. It is noticeable that the words of the reverend gentleman have had a good effect upon the people in general, and a hardware dealer in Peterboro informed a representative of Hardware and Metal that, after the delivery of this sound, practical advice from the pulpit each year, several customers, well able to pay, but naturally careless or thoughtless, have awakened up and discharged their indebtedness.

The example of the rector of Peterboro might be worthily emulated by the clergy in other towns.

CANADIAN RAILWAYS HELP TRADE.

There is great dissatisfaction in the States over the fact that the railroads are continuing their economizing in buying, and thus doing a great amount of injury to the development of industrial activity. It is generally felt that if these concerns only showed that they were contemplating entering the markets in something of the strength of past years, that the whole trading of the country would be given the stimulus that it needs at present. Buying in the metal markets is hanging fire, while furnaces and smelters are quieter than they should be. The vigorous stimulation of strong railroad purchasing is needed to set the ball rolling and to carry other consumers along with the momentum.

In Canada things are in much better shape. Both the Canadian Pacific and the Grand Trunk Pacific are looking well to the future, and providing for their anticipated increased traffic in a progressive way. The short sighted policy of economy is not considered, when the best interests of the rolling stock and the trading needs of the country are concerned. The result is that the industrial development of the country is being helped at a time it is most needed, and which help will, in itself, tend ultimately to increase the earnings of the railroads. Thus do we get the co-operation that is so essential to a country's prosperity. The United States railroads might take a lesson from Canadian railroads.

Some little time ago Hardware and Metal announced that both the Canadian Pacific and the Grand Trunk were placing large orders for cars. We mentioned that the Angus shops at Montreal were turning out twenty freight cars a day, that the construction of locomotives had also been commenced there, and that the Grand Trunk had also placed a large order for cars in Montreal. Now an order has been placed with the Montreal Locomotive Works by the C.P.R. for thirty locomotives of what is known as the Pacific type. The Grand Trunk has also placed an order with the same company for twenty-five engines. The result of this heavy purchasing can be easily understood. The Locomotive works will start at full pressure with a thousand mechanics in constant employment. Much metal will have to be bought, more wages paid, each section of the community will be benefitted, and in the end the circulation of this money will tend to increase the earnings of the railroads. There could be no greater drawback to the recovery of a country from depression than for the railroads to abstain from the buying that in ordinary circumstances they would make. If Canadian railroads are far sighted enough to start buying the United States concerns should be the same.

IMPROVING THE DEPARTMENT'S USEFULNESS.

A circular received from the Department of Trade and Commerce at Ottawa during the week shows that its officers are taking well-advised steps to make themselves conversant with the ideas of the business men in whose interests, as well as for the country as a whole, they are working.

The Deputy Minister invites Canadian exporters and manufacturers to give the department the benefit of their views on the following questions: (a) "What would you advise should be done to increase the export trade of Canada?" (b) "What improvement or change do you think desirable in the compilation of the trade statistics published by this department?" (c) "Can you suggest any improvement in the collection and publication of commercial information received from the trade commissioners?" Replies should be marked "Trade Suggestions" on the envelopes.

This is something which manufacturers and exporters in all parts of Canada should take an interest in and give due consideration.

Take an inventory of your assets: Business integrity, energy, initiative and the rest.

Whatever your experience may have cost you, forget it—but don't forget to be wiser, more systematic, more energetic, more cheerful.

Hardware and Metal Markets

(For detailed prices see Current Market Quotations, page 74.)

MARKETS IN BRIEF.

Montreal.

Tin—Cut of ½c.
Copper—Cut of ¼c.
Paris Green—List price in force.

Toronto.

Copper—Down ¼c.
Tin—Now 30, 50.
Pure Manilla Rope—Decline of ½c.

MONTREAL HARDWARE MARKETS.

Montreal, Jan. 22.—Trade has looked up considerably during the week. Orders taken by travelers are now arriving, and a general feeling of confidence is being displayed as to future business. The Northwest seems to be coming to the front strongly, and a good consuming demand is expected from this part of the Dominion. Farmers are now clear of many of the old obligations that pressed so heavily upon them last year, and should prove free buyers. Undoubtedly stocks are on the light side, and shipping to the Northwest, therefore, should play a large share in the trading of this year.

Booking ahead is still on the quiet side, but gradually new lines are opening up. Lawn mowers are moving in better strength, while hose and gardening tools can now be added to the bookings. Lumbermen's supplies are moving well. Builders' hardware seems to be about the same strength.

BUILDERS' HARDWARE—Lock sets, escutcheons, butts, and bolts have been showing somewhat better strength, although the demand can still be considered on the light side. There is no change in prices, and we quote: Discounts on door sets, 50 and 10; escutcheons, 50 and 10; escutcheon pins, steel 50, brass 55. Spring hinges per gross, No. 5, $17.50; building paper, O.K. No. 1 per roll, 75; No. 2, 70.

SPRING LINES—Booking for spring lines has improved, although still on the light side. Hose and gardeners' tools are now commencing to move. Lawn mowers and ice cream freezers are improving, while green wire cloth, poultry netting, screen doors and hinges show stimulation. We continue to quote: Screen doors, stained, $7.80; grained, $8.10; poultry netting, 60 and 2½; green wire cloth, $1.70 in 100 ft. rolls.

SPORTING GOODS—The winter lines are on the dull side, repeat orders coming in quietly. Fishing tackle is commencing to move, and a good season is anticipated. It is a little early for most spring lines to show any strength. Prices are generally firm. We continue to quote: Dominion rim cartridges and C.B. caps, 50 and 2½ per cent.; B. B. caps, 50. 10, 2½ per cent; Crown black powder, 20 per cent.

BOLTS AND NUTS—Trade shows a tendency to improve, and some fair orders have gone through. Supplies are said to be in good shape, and as dealers' stocks are light general conditions seem satisfactory for good trade. We continue to quote: Discounts on carriage bolts, ⅜ and smaller, 70; machine bolts, ⅜ and less, 60, 10 and 10; coach screws, 75; stove bolts, 80 and 7½. Wire nails are still quoted at $2.30.

SCREWS—Screws are in somewhat better demand, and good trade seems opening up. We continue to quote: Discounts are at 85 and 10 off for flat head bright; 80 and 10 off for round head bright; 75 and 10 for flat head brass, and 70 and 10 for round head brass.

HOUSEHOLD UTENSILS — Graniteware continues to show good movement. Tinware is also encouraging. Carpet sweepers are in quiet demand. Food choppers, wringers, washing machines, brooms and pails are in better request. We quote ' Sad irons, Mrs. Potts', No. 55, 75c; No. 50, 80c per set; asbestos, $1.50; cake makers, $17.25 per dozen; bread makers, $18 per sozen and upwards.

LUMBERMEN'S SUPPLIES — Canthooks and cross-cut saws continue to move well, and trade is now more satisfactory, We quote: Boot calks, $4 to $4.25 per 1,000; wing calks, $6.50; canthooks, $12 to $16 per dozen; axe handles, $1 upwards; axes $6 upwards.

TORONTO HARDWARE MARKETS.

Toronto, Jan. 22.—Jobbers report January bookings for delivery in the spring to be far in excess of the business done a year ago. At that time the future was uncertain and buying was very light in consequence. Then light buying all last year has left most stocks short in many lines and with the building trade opening up and prospects for trade in all lines improving merchants generally are in a humor to order more freely without altogether throwing away the conservatism acquired during 1908.

In both Ontario and the West the outlook is very bright, an instance of this being given by a cutlery manufacturer, who reports bookings in the first half of January to be as large as his sales during the first half of last year. This is a line, of course, which was hit hard in the dull times in the West a year ago.

Booked orders for lawn hose are quite heavy for the season, owing to the expectation of an advance in prices. On harvest and garden tools, however, they are lighter than the jobbers like to see as small bookings are generally followed by a rush of business when the season opens, with some orders being delayed or left unfilled.

The expected changes in rope and binder twine have not materialized, with the exception of a decline of half a cent in pure manilla rope. Binder twine prices for the coming season are likely to be issued at any time.

SEASONABLE LINES—Winter weather has helped trade in snow shovels, snowshoes and toboggans, but stocks of these goods are still quite large. On No. 19 snow shovels $2 net per dozen is still quoted.

SPRING GOODS—Lawn hose is being ordered freely for spring delivery, owing to a feeling that prices will advance. Lawn mowers are also being booked in fair quantities, with fence wire, screen doors and green wire cloth in fair demand. Garden hoes and spades, hay rakes, scythes and other harvest tools are rather slow. Refrigerators and ice cream freezers bookings are satisfactory. We quote 9-in. 3-wheel lawn mowers at $3.30 to $3.37; screen doors, stained, $7.80, and grained, $8.10 base.

ROPE AND TWINE—Pure manilla twine has declined from 12c to 11½c owing to a decline in the Philippine hemp market. Binder twine prices are not yet announced.

WIRE—A good trade for spring delivery is reported. New prices on barb wire f.o.b. Toronto are: Galvanized barb, $2.85, and plain twist, $3.20. Coiled spring wire continues at $2.75 f.o.b. Toronto for No. 9. Galvanized wire is quoted at Pittsburg, base sizes, 6 to 9, $2.25. Less than car lots, 10c higher. Wire nails are unchanged at $2.30; poultry netting at 60 and 2½, and green wire cloth $1.70 in 100-ft. rolls.

BUILDERS' HARDWARE — The demand is light, but prospects for an active building season seem good. Door sets. locks, escutcheons and bells are quoted at 50 and 10. In builders' supplies Canadian Portland cement is quoted at $1.70 per barrel f.o.b. Toronto, and heavy straw plain and tarred building paper, $37.50 per ton.

HOUSEHOLD UTENSILS — A good inquiry is being received for tin and graniteware, food choppers, washing machines, sad irons, etc. Lamps and lanterns are also selling seasonably. We quote $6.75 for cold blast lanterns.

HEAVY GOODS—Stocks are in good shape and the demand shows a tendency to improve. Bar iron is unchanged at $1.95. Stove bolts have advanced to 80 and 7½. Bright and steel wood screws, flat, 85 and 10, and round head 80 and 10 per cent. Brass screws are, flat, 75 and 10, and round, 70 and 10.

MONTREAL METAL MARKETS.

January 22.—Although steady trade of an improving tendency has been done locally, a cut has been made in tin and copper. This, of course, is due to the weakness apparent in the primary markets. There is, however, despite the insecurity of primary prices, a general feeling of confidence in the markets. Inquiries prove that greater assurance is being shown as to the progress of trade, and there seems to be great promise of good spring business. Orders for spring requirements are still being held back, but there is no doubt that the first real sign of strength in the markets will bring in good business. With a cut of ½c tin is now quoted at 32c, while copper, cut ¼c, is now at 15¼c. Spelter and lead are unchanged. There is no alteration in the pig iron situation.

The primary markets in tin and copper have shown no disposition to get out of the rut of poor buying, and as a result there has been declining figures both in London and New York. Copper has fallen rather severely in the former markets, and although there is still a strong effort in New York to hold

prices—producers maintaining their old attitude of being apparently not anxious to sell—the continued poorness of the consuming demand has naturally affected prices. There is looming ahead at the present rate of production a surplus of copper that does not invite confidence as to the future, presuming that there is no change in the rate of consumption. Tin has evidently struck a nasty snag. Buying has been quiet, while manipulation has been all against any advance in figures. Spelter continues strong. Lead has been exceedingly steady in London and it looks as if better buying had set in. Iron and steel conditions in the Old Country are reported at about the same strength, generally speaking, although Cleveland warrants have advanced since our last figures. In the States the situation remains about the same. There are still rumors of cutting in finished steel products, but as an improvement has taken place in the demand, particularly in wire producing, less may be heard of the cutting in future. Prices of pig iron are unchanged on steady business. A probable decrease in production is being rumored.

PIG IRON—Trade generally seems to be on a steady basis, with a tendency to improve. There is no change in pig iron prices ex-store, and we quote: Middlesboro No. 3, $19.50; Summerlee No. 1, $21 to $21.50; No. 2, $20.50. The iron and steel markets in the Old Country continue to hold their own, and Cleveland warrants are now quoted at 48s. 9d., an advance of 5d. on last figures. Prices on pig iron in the States are firm, under somewhat dull conditions, but there is a strong undercurrent of strength apparent. Furnaces are disinclined to sell far ahead, which is a good sign of confidence in the market. There is some talk of cutting in finished steel products, but there has been a good improvement in business lately and the market will therefore probably remain unchanged.

TIN—With the continued weakness in the English market tin has been cut locally ½c, and we quote 32c for ordinary jobbing lots. Fair business has been done locally, and there is plenty of confidence that good spring trade will set in. With a steady feeling given to the market by no fluctuations abroad business would be hastened. Tin in London and in New York, in the absence of a good consuming demand and the bulling manipulation of large operators, has been declining in quotations. The world's production for last year is placed at 104,150 tons as against 92,290 tons in 1907. These figures, when the poorness of consumption is considered, show that there must be more metal in sellers' hands than is good for the soundness of the market.

COPPER—A reduction of ¼c in copper locally, making quotations for ordinary jobbing lots 15¼c, show that the weakening tendency of the New York market has had its effect. Trade is of a steady character, and inquiries show that there is plenty of business in prospect. Stability in copper prices generally would help to bring this business in. Copper quotations in New York show the hammering that this metal is experiencing. The break in London has weakened the position. A strong consuming demand is imperatively needed to put the market on a firm foundation.

SPELTER—Spelter continues strong, and there is no change in quotations. Orders are not at all unsatisfactory, and this metal, like copper and tin, holds the promise of good trade coming shortly. The London market is a shade weaker, and so is the St. Louis, but this is only to be expected after the strong way quotations have held.

LEAD—There is no change in imported lead, and we continue to quote: $3.70, with Trail about 10c less. The demand locally has shown improvement. The English market has become remarkably steady for a time and it would look as if consumption is improving.

TORONTO METAL MARKET.

Toronto, January 22.—Tin and copper are slightly lower this week and iron has a firmer tendency. Beyond these the market is much the same as a week ago. Trading is quietly active and but for the irregularity of prices more business would be done. Spelter is probably the only metal which is holding its own and trading in this metal is at a normal stage. There are not the fluctuations in spelter that are noticeable in other lines, so the "scary" feeling is entirely absent. In sympathy with the basic metals old materials are undergoing spasmodic trading conditions.

The openings here and there in Canada of iron-making and iron-working plants augur well for the industrial future of this country. That Canada will one day rank high as a producer of iron and steel is admitted by men of experience who know the natural resources of the country. Coal and iron are the essentials and the country has but been scratched in the hunt for these basic properties. As in the United States the iron producing concerns are pushing towards the west, and even now Canadian smelters have a recognized standing in the community.

A recent report to the U. S. Government at Washington shows that Germany as an iron and steel producer is coming to the front. Iron production there has increased three-fold during the past 20 years and still production has almost doubled. The only difficulty is in getting proper coke, that commodity having to be imported from England. German iron costs about $13.50 a ton to produce and steel from $17 to $17.50 a ton.

PIG IRON—A little firming up is noticeable though actual prices are unchanged from the quotations a week ago. Business continues to be of small volume, uncertainty not being entirely dissipated. Cleveland is at $22; No. 3 Middlesboro, $21; and Canada Foundry, $18.50.

COPPER—Irregular prices prevail. There is again evident the up and down tendency. Trading is more active, but orders call for small supplies. Quotations are easier, and this week run from 15¼c to 15½c.

TIN—Still easy and a further decline is noted. The market price is now $30.50, though one jobber was willing to do business at $30 and another would sell for $29 if the order was a large one and the conditions satisfactory to himself. Supplies are plentiful.

LEAD—Unchanged in price and conditions. Imported pigs are still at $3.80. There is a firmness to this metal which is creating a good feeling and helping on trade.

SPELTER—The steadiest metal of all is spelter. It does not loom so large in the metal world as some of the other lines, but spelter is nearer normal than any other one line. Quotations are yet at $5.50.

SHEETS AND PLATES—Fair trade still continues at unchanged prices. Canners are taking some stocks and this is helping trade somewhat.

OLD MATERIALS—Though there is an easier feeling in some lines no lowering has taken place in prices. Copper wire and old iron have gone up from ¼c to ½c over last week's figures. Light copper is still 11c to 11⅛c; heavy copper wire, 12½c; heavy red brass, 11 to 11¼c; heavy yellow brass, 8¾c to 9c; light brass, 6½c to 6¾c; heavy lead, 3c; zinc, 3¼c to 3½c; No. 1 wrought iron, $10; stove iron, $12; machinery cast iron, $14.50; rubbers, 8c to 8½c.

FUR MARKET.

Montreal, Jan. 22.—Buying has been good this week, and the market is firm and unchanged. Fox continues to be scarce with consequent high prices obtaining. We quote: Mink, $5 to $6.50; marten, pale, $4 to $6; dark, $8 to $20; fox, red, $2.50 to $4.50; lynx, $5 to $12; otter, $15 to $25; fisher, $5 to $9; weasel, 25c to 35c; muskrat, 15c to 25c; Canadian coon, 75c to $1.25; skunk, 40c to $1.25; bear, large, $8 to $10; small, $3 to $5.

U. S. METAL MARKETS.

New York, January 21.—The Iron Age says:—In nearly every direction the iron and steel markets are quiet, and no business of any magnitude has been placed. While some of the great leaders of the industry frankly avow their belief that no marked buying movement need be expected during the first half of the year, there are other interests, notably in the Central West, who are confident that business will be very much brisker in 60 to 90 days. Some of the smaller and medium sized plants are fairly busy, but it is claimed that they are getting more than their share by cutting prices. In amount these concessions are not serious, but they are irritating just the same.

Railroad buying is still below expectations, and until it develops into normal volume the heavy lines must be content to run along as they have done for some time past. Orders were placed during the past week for 2,500 steel cars by the New York Central, and specifications for the material for 800 cars for the Duluth & Iron Range have been received by the Chicago mill. The Great Northern has ordered 6500 tons of steel rails, and is asking for 18,000 tons more. It is reported that the requirements of the Baltimore & Ohio Railroad will be for 100,000 tons, and that the Erie will need 9000 tons.

The structural markets have been quiet. None of the larger contracts which have been figured on lately have been awarded, but there has been quite a good run of small orders.

In Pittsburgh the disposition is observed on the part of the jobbers to stock up on sheets, but on the whole the general distributing trade, in the lighter lines, has not yet taken hold vigorously. Stocks throughout the country are admittedly low, so that the

day of a rush to stock up is still before us.

The pig iron markets have been quiet in every direction. The most persistent buyers are the makers of cast iron pipe. One sale of 20,000 tons of southern iron was finally effected last Thursday. Apparently the pipe makers have a good deal of business in sight. In spite of this, low prices are brough out at every letting. One of the large jobs coming up is 40,000 tons for San Francisco. For Kansas City 8500 tons is required.

The old material markets are again easier, East and West.

Copper is declining under the weight of a record production, while consumption is not expanding as rapidly as expected.

Electrolytic copper is being offered at 13⅜c., while the largest interest continues to "hold the umbrella" by declining to sell below 14½c., 30 days' delivery.

Spelter has declined to 5.10c., New York, and independent lead interests are offering that metal at 4.20c.

U. S. IRON TRADE.

Cleveland, O., Jan. 21.—The Iron Trade Review says: The slow movement of the iron and steel market continues. With some interests the past week has been the best of the new year and specifications have reached the level prevailing before the holiday interruptions, so that the month of January bids fair to show no loss of ground. The forward impetus given by active buying, however, is still lacking.

Many makers are not inclined to look with discouragement upon the present absence of consistent improvement in the market. It is declared that the opening weeks of the new year are not necessarily favorable for the receipt of heavy mill orders, as inventories having just been taken, there is an expected deliberation among buyers in specifying until the trade probabilities of the new period have been surveyed and policies adjusted in accordance. A source of satisfaction, it is pointed out, lies in the fact that any advance the market has made during the latter part of the past year is not being well sustained.

There is considerable shading of prices in different materials, but this is not regarded as significant of particular weakness, as concessions are not absent among some makers even in more prosperous times. The coke market has shown the most marked softness of late, but this has applied largely to spot material and is attributable to an over-production resulting from the nonfulfillment of the anticipation that a greater consuming capacity would be in operation immediately after the first of the year. There is more or less price cutting in plates and sheets.

When you want to make use of a friend you often find him a mere acquaintance.

The man who is never very strong against anything is never very strong for anything.

Few of us are interested in those famous pavements made of good intentions, as we don't expect to get there, anyhow.

Hardware Trade Gossip.

Ontario.

Hallitt and Bradley, Oshawa, are offering their hardware business for sale.

F. Howes, hardwareman, Listowel, has been appointed an agent for the Paris Plow Co.

The estate of J. Harry Boyd, London, is advertising his stove and tinware business for sale.

Frank A. Child, hardware merchant, Matheson, has been appointed Crown Lands Agent for that disttict.

J. N. Tallman & Sons, brass founders, Hamilton, have changed the firm name to the Tallman Brass and Metal Company.

Percy Ketchum, representing the American Naval Stores Co., New York, was in Toronto this week on business connected with his company.

S. and G. Penfold, hardwaremen and dealers in stoves and tinware, Guelph, have issued for distribution, a neat schedule of the Ontario Professional Hockey League.

John Dawson has resigned as manager of the R. H. Smith Saw Works, St. Catharines, and is succeeded by Herbert Barnes, late of the Shurley. Dietrich Co., Galt.

C. D. Clark, manager of the Winnipeg branch of Aikenhead Hardware, Ltd., was given a dinner by the staff of the Toronto house on January 15th, at the King Edward Hotel.

According to James Purvis, hardware merchant, Sudbury, there is considerable excitement at the Nickel City regarding the opening of the new Sudbury-Gowganda road to the silver mining district.

W. L. Helliwell, manager and A. M. Berryman, secretary of the Gurney Northwest Foundry Co., Winnipeg, A. P. Horsman, manager of the Gurney Standard Metal Co., Calgary, and T. L. Lightfoot, of the Gurney Foundry Co., Vancouver, are visitors at the head office at Toronto this week.

F. H. Littlefield, formerly in charge of one of the branches of the National Refining Company, Cleveland, Ohio, at Springfield, Ohio, has been appointed general manager of the Canadian Oil Companies, Limited, Toronto, succeeding T. H. Hamilton, who resigned when the National Refining Co. secured control of the company a month ago.

Quebec.

Cote & Frere, hardware and paints, St. Johns, have assigned.

H. F. Giddings, of Granby, Que., has been visiting Montreal hardware circles.

C. A. Connor, of J. H. Connor & Son, Ottawa, has been on a visit to Montreal.

T. H. Jordan of A. C. Leslie & Co., Montreal, has been in the Ottawa district on business.

W. O. Greenway, recently manufacturers' agent in Montreal, is now manager of the Liverpool, Eng., branch of Wilkinson, Heywood & Clark, paint and varnish manufacturers, London, Eng.

J. J. Broadhurst, late metallurgical expert for the James Robertson Co., Montreal, is now in business for himself at 101 Shannon St., Montreal, trading as the Lion Metal Company, smelters and refiners, and dealers in virgin metals.

F. Hyde & Co., Montreal, have been awarded the contract for altering one of the present furnaces at the Montreal Crematorium, and installing a Jacob oil burner, by which a body will be cremated within an hour, a saving of from one to two hours over present methods. F. A. Jacobs, representing F. Hyde and Company, lately visited with W. Ormiston Roy, manager of the Crematorium, the crematory of the Mount Auburn Cemetery, Cambridge, Mass., where the latest equipment is also being installed.

THE VALUE OF ASSOCIATIONS.

"Yes," remarked the man, "we have strong trade associations now, but for a long time it was the hardest thing in the world to get the men together to consider the advisability of the association plan."

"That was unusual, wasn't it?" asked his companion. "In most lines of business that is considered a valuable trade asset, these days. An interchange of opinions and discussion of plans and policies has been the making of many a business I know of."

"That's just where the rub comes in," replied the first; "in our line there was formerly a great deal of jealousy, and I am sorry to say that many of us regarded our neighbors in the same line as robber barons. It was thought that the success or failure of the business depended entirely upon the owner's individual study and planning; that what he had thought out for his business was his personal property to which he should cling tenaciously, and any effort to form an acquaintance was regarded with suspicion that well nigh placed the inquisitor in the ranks of ordinary thieves."

"But haven't you made a practice of cultivating the acquaintance of your competitors and of visiting the out of town firms in your own line?" persisted the companion. "Surely your long and successful experience is not based entirely upon your own ideas and individual work. Life would be too short to build such an enterprise as yours under such close and hampered conditions."

"Well," was the reply, "I have been very active in helping to form our associations, and we now have fairly strong ones, but prior to the time that I made trips for this purpose I did not do much visiting. It would not have been permitted. I will say, though, that within the past five years I have been accorded a cordial welcome whenever I have called upon firms in this line."

"What brought about the changed attitude?" was the next question.

"Association conventions," was the terse reply. "I regard them as the greatest possible business helps. I have frequently made valuable acquaintances and obtained priceless ideas on these occasions that otherwise I should never have had."

A woman's idea of economy is to buy 5 cents' worth of anything on two separate occasions instead of blowing in a dime all at once.

Bottle your temper, then lose the corkscrew.

We seldom know that our friends think ill of us until somebody else knows it first.

When opportunity knocks, how few men know how to entertain it properly.

New Brunswick Hardwareman Dead—Montreal Traveler Honored by French-Canadians.

ST. JOHN.

January 19.—Business continues rather quiet as is usual at this time of the year. The majority of the dealers are still busy stock-taking and re-arranging their goods.

The exports from this port up to Jan. 16 show quite a large increase over the previous season. Twenty-nine steamers have taken away goods valued at $5,537,927, of which $3,768,453 was Canadian products, and $1,769,474 from the U.S. In the same number of steamers in 1907, the value of goods shipped was $4,912,000, making a gain for 1908 of $625,837.

John Barker, for many years a member of the hardware firm of Chase & Barker, who carried on an extensive business in St. Stephen and Calais, died Jan. 16, aged 78 years. He leaves a widow and two sons.

The department of public works of Canada has awarded contracts building wharves in various parts of New Brunswick. Thomas P. Charlesson, of Ottawa, will build an extension of 300 feet to the east pier at Quaco; John E. Kane, of St. John, has started a crew of men at work building a pile wharf 360 feet long at Beaver Harbor, and will also build a 400-foot breakwater at Lorneville, at Welshpool, Campobello, E. R. Reed will construct a wharf 314 feet in length; an extension of 54 feet will be built to the wharf at Harvey Bank, by Oscar and Warren Downey and at Whitehead, Grand Manon; J. E. Gaskill and L. F. Foster will construct a wharf 200 feet long with pier head 40x30 feet.

A board of arbitration to settle differences between the International Ry. and the N. B. Ry. Company is now in session here. The N. B. Railway Company is claiming compensation and damages as a result of the International's right of way running through some 30 miles of their timber lands. The arbitrators are Henry Hilyard, of Hilyard Bros., millowners; Senator John Castigan and Hon. Charles E. Oak, of Bangor, Maine.—W. E. H.

MONTREAL.

J. R. Terrill, the well known representative of Caverhill, Learmont & Co., Montreal, has again been re-elected by acclamation a town councillor for the Municipality of Ahuntsic, Que. Since Mr. Terrill has entered the council he has endeavored to make this municipality, which is a lovely suburb only ten miles from Montreal, thoroughly up to date. A new drainage system of the latest plan has been put in, also new pumphouse, high voltage electric lights, and sidewalks.

It may be added that the Mayor and all the other councillors are French-Canadians, and at the meetings papers and speeches are all in the French language. Mr. Terrill is the first English councillor who has served on the council. On nomination day he was called upon for a speech in French, when he spoke for some time as fluently as if he were speaking in English. He said in part, how much pleasure it gave him to see the "entiente cordiale" which existed in the Province of Quebec between the two nationalities, and trusted that each year the bond of friendship and confidence would still be closer. After speeches from the Mayor and other councillors, the meeting broke up by singing "O Canada."

Ontario Trade Items

Leamington to Have a Glass Factory—Good Order for Tents From Cobalt—Hamilton Manufacturer Gives His Views Regarding Labor Unions—Fakirs at Work at Brantford and Kingston.

OTTAWA.

Jan. 19.—Building permits issued at Ottawa in 1908 totalled 507, valued at $1,794,075, compared with 355 in 1907, valued at $2,364,950. Most of the 1908 permits were for residences.—G. E. M. H.

KINGSTON.

Jan. 19.—Alexander Robinson, formerly with the old hardware firm of John Muckleston & Co., is now manager of the mirror department of Forman, Ford & Co., Minneapolis, Minn., one of the many Kingston boys to gain prominence in business across the border.

The board of works will recommend the council to construct 88 concrete sidewalks, which will total over seven miles. The total estimated cost is $30,000.

A. Strachan and U. D. Dalton, hardwaremen prominent in curling circles, are taking part in the big bonspeil held here this week. Over 60 rinks are taking part.

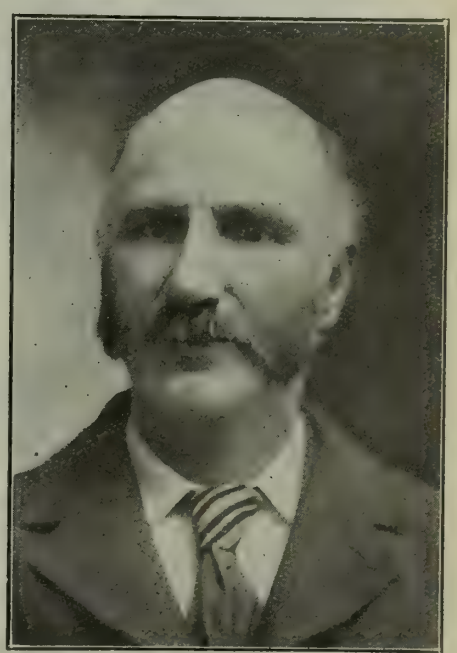
Owing to the two recent big fires in the city, the council is enquiring into the strength and equipment of the fire department, and the matter is now in the hands of the fire and light committee for a report. Some of the merchants are advocating the forming of a volunteer brigade, to act in conjunction with the paid men.

A very handsome display, showing a cosy grate fire, in the window of Hall's plumbing shop, has been much admired.

A note of warning has just been issued by a citizen who was "stung." The citizen showed your representative a sample of so-called "asbestos" covering for lamp wicks. It was sold in his home at 75c by a stranger, who guaranteed it to last three years, and to be a great saving on coal oil. It lasted three nights, and then fell to pieces. The arrangement is simply a perforated piece of thin metal, fitted tightly over the top of the wick, with the aid of a pair of pincers. The light department, as well as the local electricians, deny that they have any connection with the stranger or his scheme.—E. G. B.

GANANOQUE.

Jan. 20.—In the recent municipal elections here James Donevan, hardwareman, was elected mayor after four



MAYOR JAMES DONEVAN, Gananoque.

years' service as alderman and five years before that on the board of education, one of which as chairman of the board. The reeveship is also held by a hardware manufacturer, C. E. Britton, of Cowan & Britton. Mr. Donevan purchased the hardware stock of the Gananoque Department Store Co. in 1902 and prior to that had been in the general store business in the firm

of Britton & Donevan. He has been a resident of the town since 1865.

COBOURG.

Jan. 18.—The car ferry Ontario has arrived in port with twenty-eight cars of soft coal billed for Cobalt. This is the first consignment sent to the northern mining country by this route, but it is learned that more is to follow.

The first train of cars was shunted into the new steel plant here this week with a quantity of material.

M. Jex & Co. have been awarded the contract to erect the smoke stack at the steel works. The structure will be 110 feet high with a foundation laid fifteen feet below the ground. Two hundred and fifty thousand bricks will be required. Excavation commenced this week.

PETERBORO.

Jan. 17.—Harry G. Denne, of the American Cereal Co., Peterboro, is to build a cottage at Stony Lake.

G. Walter Green, who has been operating a foundry and machine works that has grown rapidly during the past few years, has received a charter for his business, which will be known in future as the G. Walter Green Co., capitalized at $100,000, with new officers. They will continue to manufacture mill machinery of all kinds, steam engines, wood and iron pumps, etc.

Simplicity and plainness is apparently one of the features of advertising in some cases. One day this week the Peterboro Hardware Co. put in a window of coal scuttles. The very name is inartistic and devoid of attraction, yet it is safe to say that there was scarce one pedestrian that passed that window without noticing it. The number of sales was a guarantee of the effectiveness of the scheme.

The hard dry weather is the friend and benefactor of the hardwaremen handling hockey sticks. They seem to break very easily in this weather, whereas when the air is damp the demand for new ones falls off appreciably. The numerous teams keep this line of the business brisk.

Webber Turner, of the firm of J. J. Turner & Sons, has sent home to the factory of this city an order from Cobalt for fifty tents to be used by the miners in that district. Most of them are for the prospectors who are going to the new territory at Gow Ganda. They are of special make for use in that district. Larger orders are expected from Mr. Turner in a short time.

The Lakefield Canoe Co. have just shipped a car load of canoes to England and another consignment to the United States. The canoe business in this city is reported brisk and complete staffs are at work. The orders are for canoes and skiffs and not a few launches of different models are in the course of construction.

The accompanying cut shows the interior of the Best Stove and Hardware Company's store. The management is in the hands of several of Peterboro's popular young men and their success has shown that they are aggressive and progressive managers. Their business has advanced rapidly and they now carry a full line of hardware. A special line is the Happy Thought stoves. The business was founded by E. M. Best, who was responsible for the success it attained. He has since devoted his time to Y.M.C.A. work and his brother, Ray P. Best, who was with him in partnership, is carrying on the business with W. D. Campbell, formerly a commercial traveler. Together they are keeping up to the standard set when the business was established.

Interior of Best Stove and Hardware Store, Peterboro.

The franchise of the city streets has been extended for three months to the men who are interested in securing natural gas for Peterboro. They have been unable to obtain a lease of the land desired owing to the refusal of four of the farmers who own a part of it to come to an agreement. Mr. Dettman, of Waynesburg, Pa., is chiefly interested in the proposition together with ex-Ald. R. Leary. The latter went to Lindsay during the week and states that if no agreement is arrived at here, they will devote their attentions to securing land near Lindsay as the same conditions for natural gas are said to exist there.—H. T.

HAMILTON.

January 19.—At the annual meeting of the Board of Trade last Thursday, H. H. Champ, of the Hamilton Bridge Works, who the week previous was the only one nominated for the office of president of the society, was declared elected by acclamation. In his inaugural address Mr. Champ spoke at some length on labor unions. He thought labor unions should be compelled to take out charters of incorporation, so that while guarding their own interests, they should be compelled to assume proportionate responsibility to the manufacturers. He believed that the manufacturers would be safeguarded if they had to deal with incorporated bodies. Manufacturers who had to estimate on the cost of raw material and its development could not safely estimate on the cost of labor because he had no guarantee that the then existing wages will obtain. Another point on which he raised an objection was the equality on which labor unions placed all workmen despite their individual fitness. The result was that most of the manufacturers recognized the unfairness of this rating and therefore had adopted the plan of paying on piece work. Mr. Champ also scored the foreign labor agitators and said they ought to be compelled to confine their agitations to their own countries. Arthur F. Hatch, of the Canada Steel Goods Company, was elected a member of the council of the board.

The will of William J. Copp, for many years head of the well-known stove manufacturing firm of this city, has been probated. He left $56,564.91.

The Hamilton Brewing Association took out a permit a few days ago for an addition to its plant to cost $2,500.

It is understood that the Union Drawn Steel Co., of this city, is negotiating for the erection of a large steel plant in Buffalo.

Some of the local manufacturers are making strenuous efforts to have the annual meeting of the Canadian Manufacturers' Association held here next year. Mayor McLaren has approached Robert Hobson, the president, with a view to enlisting his aid in having the meeting held here. As Hamilton is a large manufacturing centre, it is thought that its claim for the convention is well established, unless some other place has already been promised the convention.

Local merchants and manufacturers are encouraged by the announcement that John Patterson has succeeded in floating his bonds for the construction of the Hamilton, Waterloo & Guelph Rail-

way. It is stated that already the right of way is being purchased. The building of this road would mean a big thing for local business men.

H. G. Rogers, St. John, N.B., has been appointed agent for the Ontario Lantern & Lamp Company for the Provinces of New Brunswick, Nova Scotia and Prince Edward Island.

It is understood that a new post office will be erected in Dundas soon. A Government inspector was in town last week looking for a site for such a building. The cost of the structure is expected to be in the neighborhood of $35,000 and $40,000.

The Hamilton Bridge Works Company has been incorporated with a capital stock of $1,000,000. The incorporators are: Hon. John S. Hendrie, C.V.O.; William Hendrie and Walter B. Champ, of Hamilton; George M. Hendrie, of Windsor, and A. D. Braithwaite, of Toronto,

Nelson Stout, Ruth Street, this city, has invented an automatic trap for rats and all sorts of animals. The trap will set itself after being sprung.

D. L.

GALT.

January 20.—Your correspondent this week had the opportunity of interviewing several hardware travelers (they are quite numerous in Galt at present) each and all of whom had nothing but good to say of the present condition of trade. The hardwaremen, they say, are buying more freely than for some months, which consequently points to a larger expenditure on the part of the general public. Much interior work is going on at present, many new houses being completed, and consequently the demand for paints and oils is brisk. The Down Draft Furnace Company are working full time, and salesmen report a good demand for this firm's excellent lines of ranges, stoves and furnaces.

Local hardware men also report business as being quite satisfactory. W. J. McMurtry, in an interview, said that both his Galt and St. Thomas stores were doing a large business. "By a large business," he said, "I mean a steady business from day to day, not big sales to-day and a large falling off to-morrow." Other hardwaremen interviewed corroborated Mr. McMurtry's statements.

The Canadian Brass Company is doing big things with a large quantity of Chinese coin recently imported from China. The brass is of exceptional good quality and can be put to many uses. Several sample candlesticks turned out have attracted a great deal of attention. They are of massive design and ornamented about the base with the real coins nicely polished.

Negotiations at present under way will probably secure for Galt an industry known as the Champion Potato Machinery Co., of Hammond, Ind. Otto Kloenzer is president of the company, which is about to establish a branch in Canada. The firm manufacture potato cultivating machinery and other farm implements. In all probability the building and machinery of the defunct McVicker Engine Company will be taken over.

There is just a probability that the Edge Tool Factory, recently declared insolvent, will be started again under new management. The officers of the old company are still in charge and are disposing of the manufactured stock. The company turned out an excellent line of goods, were well equipped with machinery and did a good trade, but lack of capital appears to have been the difficulty. It is an excellent opportunity for the proper persons.

During the present year there will be an unprecedented amount of building in Galt. Last year, despite the financial flurry, more than 100 new houses were erected and this year that number will be more than doubled. This means a whole lot to trades of all kinds, and the hardware man and the plumber will come in for a good portion of the benefit.

Sporting goods men are reaping a harvest just now. What with two hockey clubs in town the game has taken on an added impetus. The demand for skates is larger than ever before, while hockey sticks are moving out very rapidly.—B.E.C.

BRANTFORD.

Jan. 19.—A cold snap descended on this city last week, the thermometer dropping to 20 degrees below zero. The result was that gas stoves and heaters were in great demand, and a large number of sales were reported. Gas fittings were also good sellers. This has, so far, been a generally mild winter, and this has had a detrimental effect on the sale of winter goods.

W. C. Boddy, manager of the Standard Bank, has been appointed a director of the Brantford Roofing Co., in place of the late W. G. Elliott.

Watt & Squire show a line of safety razors at a popular price in one of their windows this week. The display attracted a good deal of attention.

The warehouse of the Buck Stove Co., occupied by the Wempel Box Co., was burned out last week. New machinery will be ordered, and the firm will recommence work as soon as possible.

The question of bringing new industries to this city is receiving a good deal of attention here at the present time, and it is expected that with the present energetic city council, something will be done to "Boom Brantford." It is proposed to have an assessment commissioner, who will revise the assessment roll, and place all the factories on a more equitable basis.

A new school will be erected on the site of the old Bruce School in South Dumfries. Tenders for the equipment will be asked for shortly.

The local merchants who were defrauded in the linseed oil shipped to them by a Hamilton firm will organize and secure legal advise. They intend to fight any suit that may be brought against them by the firm or by the railway company.

Stock-taking is in full swing this week among the hardware dealers.

Waterford merchants will recommence closing their stores at six o'clock, except on Wednesdays and Saturdays—

It sometimes comes to pass that after a man has made money the money gets busy and unmakes him.

LONDON.

January 19.—A year ago the ratepayers of London voted the sum of $235,000 for the purpose of establishing a distributing plant for Niagara power, but as yet no steps have been taken looking to construction of the service. As, however, we are promised that the power will be delivered at the city's gates by December next and this city has contracted for 5,000 horsepower per day, it is thought to be time the aldermen were doing something. The London Electric Company, which for years has had practically a monopoly of the electric power business here, is willing to sell out to the city, but as that concern has an expensive power house and generating plant, besides its poles, wires and lamps, it is feared it will ask a price which the city can not entertain. However, before calling for tenders, the aldermen will ascertain what the London Electric is willing to sell for.

Miss A. Stephenson, for some time in the McClary's head office, has been transferred to the Winnipeg office of the company.

The Hobbs Hardware Company's employees have a pretty fast hockey team and on Saturday they contested with the Delaware team for supremacy, the result being a tie—3 to 3.

The destruction by fire this morning of the Globe Casket Works, corner of Dundas and Adelaide Streets, may mean a serious loss to London, as there is a prospect that instead of re-building here the company will make Toronto its future place of business.—F.T.Y.

CHATHAM.

Jan. 19.—At the inaugural meeting of the water commissioners last Thursday night, Mayor Westman, who is by virture of his office a member of the water board, was elected chairman. This is the first time in the history of the board that the mayor has been chosen as presiding officer.

The Canadian Flax Mills Company is a new concern which has located in Chatham, with factory on Thames St. From 12 to 15 men will be employed during the winter, and a new building will be erected in the spring.

A. D. Westman, of Westman Bros., has returned from a business trip to London, Toronto and other eastern points.

A well attended meeting of the board of trade was held last week, when it was decided to invite Hon. Wm. Pugsley to visit Chatham, for the purpose of ascertaining personally the need for the dredging of the Thames and the construction of a turning basin at Chatham. Insurance rates and a number of other matters of interest were discussed.

Leamington is to have a glass factory. This announcement comes as the result of the recent discovery of large deposits of pure silica near Amherstburg. A company is being formed to build a factory in Leamington, the concern going to that town on account of the fact that the Heinz Pickling factory there will be a good customer, in

addition to which the town has a supply of natural gas.

A scheme is being discussed in Leamington for the heating of all the busines portion of the town with the exhaust steam from the electric light plant, as is now done in Chatham by the Chatham Steam Heating Company. The scheme is being received with favor, the town being so compact and the lighting plant so near its centre as to render the laying of the mains a minor matter.

Robert Ross, of Leamington has received the contract for the plumbing in the new Leamington post office.

Thomas Nixon, formerly of Brigden, has launched into the hardware business in Nanton, Alta.

Lorne Handy, employed on J. W. Fleming & Sons' hardware staff at Blenheim ever since the firm started business, has gone into a new enterprise, having purchased the general store of E. J. Buzzard at Erieau. He will take possession Feb. 1.

J. M. Perry, of the Forest Brass Works, contemplates increasing the capital of the concern by turning it into a joint stock company. He has received orders which necessitate enlarging the capacity of the present factory. The concern now has a free building and a ten-year tax exemption.

The Prairie Provinces

Saskatoon Firms Report a Large Trade —Description of New Hospital.

SASKATOON.

January 16.—Richard Gas has been appointed by the Public School Board to superintend the heating system at Alexandra School.

R. G. Clare will re-build his store at Warman, which was recently destroyed by fire.

The city council has decided to place a subway under the C.N.R. tracks at Twenty-Second Street. The railway company will pay part of the expense.

G. G. Taylor's office and sample room containing plumbing goods, was damaged by fire early on Wednesday morning.

Outside work, as far as builders and tinsmiths are concerned, is practically at a standstill owing to the severe weather. The general activity which prevailed amongst the tinsmiths and metal workers all fall has toned down and several hands have been dispensed with for a time. A good season is looked for next year in all lines of business.

A temporary warehouse is under construction in the wholesale section, for J. J. Nicholson, who will represent the Grey Carriage Co. and the Manson-Campbell Co., Chatham, Ont. The building under construction is 40x60 feet, one storey, and will be metal clad. The contractor is F. W. Downs. The firms interested own considerable trackage property here and it is understood that a permanent structure will be put up in the near future. In the meantime goods will be handled from the temporary warehouse. Material for the Cockshutt Plow Co.'s warehouse has been placed on the site and building will commence as soon as the weather will allow.

During this season M. Isbister & Son have installed twenty-five "Economy" hot air furnaces in various residences and buildings throughout the city. Two big contracts completed by the same firm were the sheet iron and cornice work on the city hospital and the post office. On the latter building a copper cornice was placed. Plumbing fixtures were installed in the residences of W. J. Robertson and Mr. Drew, the Royal Hotel and the C.P.R. bunk house at Sutherland.

The Hub Roofing & Cornice Co. report having had a busy season, the whole year's business being fair. Even at this part of the season a considerable quantity of work is on hand. The following contracts were done by this firm: Cornice and metal work on the court house at Battleford; the G.T.P. roundhouse at Biggar, and the G.T.P. roundhouse at Wainwright; new city fire hall; A. McDonald Co.'s warehouse; Rogers' Fruit Co.'s warehouse; Clare & Little, warehouse; Great West Furniture Co.'s block; Alexandra School; Speers & Paul's store; school at Sutherland; school at Aberdeen; fireproofing all windows at the Empire Hotel. McClary's "Sunshine" hot air furnaces were installed in the following residences: J. Coglon, J. Holmes, T. F. Calder, W. H. Cleveland, T. H. Lawson, Mr. Arrand, Dr. G. A. Munroe, and J. Comrie. The A. McDonald Co.'s warehouse was also heated and two furnaces were installed in the Cairns' warehouse, besides a number of repairs and overhauling jobs.

R. E. SCOTT, REGINA.

Hobbs Mfg. Co. Traveler Married at London Last Week.

A hockey team from the Hub Roofing and Cornice Works tried their mettle against a team from the Cairns hardware store. The iron workers downed the hardware men to the tune of 6 to 1.

On the information of the city health inspector, Gordon and Sparling, butchers, were fined for having an unventilated closet oa their premises. A vent pipe has been put in so as to comply with the health by-law.

The annual meeting of the Board of Trade has been fixed for Jan. 18th, when new officers will be elected and other business in connection with the board attended to. At the last weekly meeting of the board the question of the city's coal supply was brought up and it was decided to request the C. P.R. to hurry along a supply now on the way from the western mines. An effort is also being made to reduce the freight rate on coal between here and the Edmonton mines.

The citizens have voted $30,000 for the purchase of grounds on which to erect permanent buildings in which to hold the annual agricultural exhibition. The buildings will be put up this year.

The new $55,000 municipal hospital is all but completed. The contractors were the J. McDiarmid Co. of Winnipeg, and the architect, W. W. LaChance of Saskatoon. The steam heating and ventilating systems, the plumbing fixtures, the cornice work and the sheet metal work was done by M. Isbister & Son, of this city. Two No. 200 Pease "Economy" steam heaters and ventilators were installed. Altogether there are 114 radiators in the building. Some of these are fixed overhead where it has been found inconvenient to place them on the floor. Behind the steam

Interior of M. Isbister & Son's Store a t Saskatoon.

heaters an electric motor and fan are placed, which will be connected with the city power plant. From the fan fresh air will be driven through the heating plant and will be conducted to each room in the building through a large galvanized iron trunk in the corridor of the basement. From the large duct smaller pipes will supply each ward with warm air in the winter months and cool air in the summer. The air, on its way up, passes through a charcoal basket, thus purifying it before entering the rooms. Each room is also supplied with a foul air vent which passes to trunk pipes in the attics and thence through the roof. The four public wards are equipped with three sets of fresh and foul air vents. Floor registers are used in the winter and wall registers in the summer. There are six bath-rooms in the building and eight closets. The closets have flushometer valves connected with a water supply in the attics. The other fixtures are eight lavatories, four clinic slop sinks, four diet kitchen sinks, one butler's pantry sink and one surgeon's sink. The clinic slop sinks are equipped with foot pedals connected with the hot and cold water supply so that nurses do not have to touch the taps with their hands. There is also a jet spray for flushing bed pans, which may be operated with the foot. The Bronx combination waste and supply is used in the bath rooms. The surgeon's sink, at which instruments will be cleansed, is operated by means of a Clover knee action. The plumbing fixtures installed were supplied by J. L. Mott. A 150-gallon boiler in the kitchen supplies some of the fixtures with hot water, while a 200-gallon boiler connected to a garbage crematory in the left wing supplies the others. In the locker room there are eight iron cage lockers where patients' clothes may be kept. A. D. McLean superintended the instalation of the heating system, the plumbing fixtures and the cornice work.—D.G.R.

British Columbia

New Hardware Store at Alberni—Company Organized to Secure By-products of Pine Stumps—Victoria Dealers Sell All Skates in Stock.

VICTORIA.

Jan. 13.—During the past week nearly all building and other outside work has been at a standstill owing to the extremely cold weather.

General trade has been very quiet. There has been a very heavy run on heating stoves of all sorts. There has been more and better skating this year than there has been for many years and as a result there is not a pair of skates on sale in town to-day, all the dealers being entirely sold out and the demand is still very large, many eager would-be skaters having to go away disappointed. The sale of skates this year has far exceeded that of any previous year, some dealers having sold over a gross pairs.

The Victoria Machinery Depot are continually adding the newest and most up-to-date patterns of labor-saving machines to their plant to replace those destroyed by fire last year.

A syndicate of English capitalists has offered, under certain conditions, to construct the pipe line from Sooke Lake to Victoria, and other necessary work in connection therewith, to connect with the city's waterworks system, all ready for the city's consumption. The work will cost about $1,500,000. The city is to pay 5 per cent. on the work as constructed, and is to pay all cost of maintenance and expense of operation. The city, at the end of 35 years is to have the option of purchasing the whole property at cost.

The company making the offer is the Canadian Agency, Limited. The matter is to be discussed at a special meeting of the council and a referendum may be submitted to the ratepayers.—W. B. C.

VANCOUVER.

Jan. 16.—The session of the Legislature which opens next Thursday, will see some important measures come before it, principal of which will be applications for charters for railways in different parts of the province. The indications are that railway building will go on with more activity than ever, and railway construction means good business while in progress and new towns after the lines are completed. Behind the application for a railway between Skidegate and Rennel Sound, on Graham Island, one of the Queen Charlotte group, lies the story of a large enterprise. Leigh Hunt, formerly of Seattle, who made a fortune in Corea, and an English capitalist, have formed a company with a capitalization of $10,000,000 to take over 27,000 acres of coal lands on Graham Island from a Victoria syndicate, and development will be commenced. A fleet of colliers will be established and the operations carried out on a large scale, with the object of supplying the northern coast.

As a relic of the cold snap we have six inches of snow and several hundred water services frozen. About 500 were frozen altogether, and plumbers and city pipe men were kept very busy night and day. The electric thawer of the city prevented a lot of expense and suffering on the part of householders.

The cold had the effect of stopping building operations and work in general. The mines are starting up again after the week's cessation, but until the snow is out of the way building will necessarily be slow. Twenty-four permits were issued last week, valued at $34,540, all for dwellings and additions.

H. W. Petrie, president of the H. W. Petrie, Limited, of Toronto, Montreal and Vancouver, is out here on a business trip. The combined floor space of their warerooms is over 75,000 square feet. Mr. Petrie likes the look of this city so well that he will make his home here for a portion of each year.

CHILLIWACK.

Jan. 16.—The utilization of tree tops, stumps, etc., is the object of many companies, and a new concern is to be established in Chilliwack to use this refuse in the manufacture of charcoal, tar, turpentine, creosote, etc. It will be known as the Canada Chemical and Wood Distilling Company. One hundred and thirty acres of land with timber on it have been secured. The capitalization will be $25,000 and arrangements are being made for an early start in the erection of a building and the installation of machinery.

ROSSLAND.

Jan. 16.—Fire gutted the foundry department of the Rossland Engineering Works, burning a good many patterns and injuring the machine department, with a loss of about $10,000. The brigade had a hard fight for an hour and a quarter, contending with the extreme cold. The water freezing on the machinery prevented the fire from warping it. Wm. Cunliffe, the owner, says he will resume operations as soon as the damage can be repaired.

ALBERNI.

Jan. 16.—A. W. Moore and A. D. Cooper are installing a brick-making plant, so as to be ready for the spring building operations. This town will go ahead with the construction of the line of the C.P.R. here from Nanaimo, on the east coast of the Island, and the man with building materials will find a ready market.

C. A. McNaughton and R. F. Blandy, the latter of whom has been for 18 months clerk for A. E. Waterhouse, have built a new store and will open up a hardware stock therein.

THE PROVING OF GUNS.

The question of the proving of guns has been advanced a stage and the result of the action of the Birmingham and Provincial Gun Makers' Association has been that it has been decreed that no guns shall be admitted into Australia unless they carry with them a certificate that they have been proved with a similar test to the English proof. British gunmakers contend that it is not enough that the gunmakers of America should be able to prove their own guns; they argue that the only satisfactory method is to have legalized proof-houses and guns proved in the usual way.

An auctioneer at Aylesbury, Eng., was fined 1s. with £5 5s. costs, for selling a double-barrelled gun which had not been proved at one of the two proof-houses in Birmingham and London. It was pointed out that the gun was manufactured in America, where there are no proof-houses, and the Proof Act, 1868, provides that such guns should be proved within 21 days of their arrival in England. The defendant pleaded ignorance of the law. The prosecuting solicitor stated that it was often found that such guns were foisted upon auctioneers for sale to the public.

DIVIDING THE LOSSES OF AN ESTATE.

A subscriber writes: "A and B form a partnership, A contributing 75 per cent. and B contributing 25 per cent. of the capital. A, in his will, provided that his interest shall be left in the business in the event of his death, to be under the sole control of B. A dies within a few months afterwards, and B elects to carry on the business. In the articles of agreement the profits were to be divided equally between A and B or the estate of A and B. Business was continued under this arrangement for 15 years, the balance sheets being signed yearly by the executors of A, and were always entirely satisfactory to them. The estate interest decided to wind up the business and forced it into liquidation, and afterwards forced it into court for settlement. They now claim that in winding up the business that the loss of about 14 per cent. on the capital of the two interests must be divided equally between the two interests. I claim that this loss should be divided pro rata with the capital of each. Interests of each at liquidation were both slightly reduced from amounts as standing at the time of death of A."

Remarks: The answer depends upon how the loss of 14 per cent. on the capital is made up. If in this loss are included any expenses of winding up the business, then B pays one-half of such expenses. If, however, the accounts have been correctly kept, and the loss of 14 per cent. represents the difference between the amount of cash put into the business and the amount received in payment for the business, then the division of the assets should be pro rata 75 per cent. and 25 per cent., and B would, therefore, bear only 25 per cent. of the loss. If B were entitled to pay one-half of the depreciation he would be entitled to receive one-half of the assets. If A's executor wishes to establish B's right to a half interest in the capital of the business, they should pursue their present claim. This opinion is given on the facts as presented and on the supposition that B had not altered his position by any definite agreement at the time of commencing the liquidation.—Editor Hardware and Metal.

PUBLIC BUILDINGS.

A new school will be built at Rosthern, Sask.

A new high school will be erected at Dundas shortly.

A new Roman Catholic church will be erected at Ottawa.

A new Presbyterian church will be erected at Sudbury.

The by-law to establish a free library was carried at Mt. Forest.

It is stated that a movement is under way for the erection of a hospital in Hull.

The Kingston post office building is to be extensively enlarged at a cost of $30,000.

Oshawa ratepayers have approved a by-law to erect a high school at a cost of $20,000.

Elora ratepayers have approved a by-law providing for the maintenance of a free library.

The Canadian Pacific Railway have donated a site for a school building at Outlook, Alta.

Talbot Street Baptists, London, are contemplating either the enlargement of their present building or the erection of a new church.

The ratepayers of Strathroy have approved a by-law to provide for the maintenance of a Carnegie library.

The School of Mining at Kingston will ask the Provincial Government to erect a building for mining mineralogy.

E. R. Sims, manager of the Calgary Amusement Co., will probably erect a new theatre building at Edmonton.

Plans are being prepared by Harry J. Rill, Detroit, for an auditorium building at Chatham for the Ursuline Sisters.

The two wings of St. Jerome's College, Berlin, which were recently destroyed by fire, will be rebuilt in the spring.

Plans for the new Calgary fire hall have been completed. The building will be erected on the site of the present Central fire hall. The estimated cost is $42,000.

Tenders are called for the hardware required in the new public bath-house and the new wagon-house being erected at Toronto. Tenders close February 2, and should be addressed to Joseph Oliver, chairman of the Board of Control.

GENERAL BUILDING NOTES.

The International Harvester Co. will erect a district warehouse at Saskatoon.

A new Y.M.C.A. building will probably be erected at New Westminster this year.

A business block will be erected at Victoria by W. & J. Wilson, at a cost of $25,000.

The Kirk & Whitman Clothing Co. will construct a modern brick block at North Sydney.

H. W. Hudson, Prince Albert, will erect a three-storey business block at a cost of $6,000.

Windsor's building permits last year numbered 126, valued at $298,000, an increase over 1907.

McMorine Bros., Richmond, Que., will greatly enlarge their department store by additional building.

Plans have been prepared for an apartment house at Montreal for David Sperber, at a cost of $15,000.

A new central Y.M.C.A. building, to be the finest in Canada, is proposed to be built at Toronto. A fund of $1,000,000 to aid this work will be raised.

Honeyman & Curtis, Vancouver, have prepared plans for the erection of the Canadian General Electric Company's new building to be built there at a cost of $70,000.

Catalogues and Booklets

Manufacturers or jobbers sending printed matter for review, should draw attention to the new lines listed; and retailers sending for catalogues or other matter, should write on their regular printed letterhead and mention this paper to make clear that they are in the trade.

Steel Sashes and Casements—In the construction of the newer warehouses, factories, schools and public buildings, steel sashes are coming more and more into use. The expanded Metal & Fireproofing Company, Toronto, has issued a catalogue illustrating their Fenestra steel sash, which already has become standardized in Great Britain and continental countries. It combines a handsome light appearance with great rigidity and strength, and compares favorably with the wooden sash in price, while possessing fire-resisting qualities of great value. The Fenestra can be designed in any style or size with any area of ventilation, and may be hung in a variety of ways to swing inwards or outwards. The company also make Economic and Standard steel casements suitable for banks, offices, residences and churches. These casements are not at all affected by the weather, and may be affixed to wooden, terra cotta, stone or brick mullions or jambs. The design of fittings can be varied to suit individual taste.

Paroid Roofing.—F. W. Bird & Son, Hamilton, are circulating a well-printed little booklet showing residences, factories, barns, railroad depots, etc., the illustrations being backed up by testimonials. For 91 years this company has been making papers and felts but for the past 25 years have given special attention to roofing materials.

Forsyth Calendar.—The Forsyth Mfg. Co., Buffalo, N.Y., makers of the "Wise buyers' line," as they term it, including bath room fittings, squares, cleavers and bicycle accessories, have forwarded a small but artistic calendar, showing a shield containing samples of their goods.

Pocket Dairy.—The James Robertson Co., Toronto, have supplied their customers with a pocket dairy containing blanks for memos for each day, together with several pages devoted to information for painters, postal tables, etc.

Useful Calendar—A handy and useful calendar is that gotten out by the Martin-Senour Paint Co., Montreal. It is of banner size and the figures are large and plain, with the Sundays and holidays shown with double lines. The design on the banner shows a painter looking through a brush and holding a tin of Martin-Senour paint marked "100 per cent. pure." The painter is appropriately called "the man behind the brush." The company's trademark occupies a lower corner.

J. D. Smith, Baysville, Ont., has forwarded to Hardware and Metal a copy of his calendar for 1909, showing the heads of a girl and a horse. It is entitled "Comrades," and it has had a big run this year.

Hardwaremen Bigger Than Their Business

Interesting History of Chatham's New Mayor—Not Yet 40 But a Successful Merchant, an Enterprising Manufacturer and a Rising Man in Public Life.

Enthusiasm seems to be the keynote of the business and municipal career of William Henry Westman, who was on Monday, Jan. 4, elected to the mayoralty of Chatham by a majority of 388. Not yet 40 years of age, Mr. Westman has built up a splendid hardware business in Chatham, in addition to which he has to his credit a term of service in the municipal council quite lengthy for one so young.

Musquash, in the Muskoka district, was Mr. Westman's birthplace, and had he continued to live there, Musquash would probably to-day occupy a substantial place on the map of Ontario, instead of merely exciting a mild curiosity when the name is uttered. For Mr. Westman is pre-eminently an advocate of civic progress and industrial growth, and if Musquash had possessed even the least of natural advantages "Harry" Westman would assuredly have made the most of them. But the future mayor, at an early age, moved to Ottawa and later to Toronto, these cities being associated with his earliest years.

At eight years of age London became his home city, and it was there that Mr. Westman received the major portion of his public school and business education. There his uncle, Mr. A. Westman, was the head of an old established hardware firm, now rounding out its fortieth year in business; and it was but natural that the young man should take up the family trade. Nearly twenty-five years ago, when still in his early teens, he joined his uncle's staff, and he has, with little side interests in a municipal and industrial way, been a hardwareman ever since. And that after a quarter of a century of experience this young man knows hardware all the way from nails to stoves, goes without saying.

Later, in 1895, Mr. Westman set up for himself in Chatham, purchasing the business of Shoemaker Bros., previously conducted by Osman and Frank Shoemaker. This business he carried on alone for three years, when he was joined by his brother, Alfred D. Westman, who has been associated with him ever since under the firm name of Westman Bros. The business conducted includes a large line of general hardware, stoves and tinware, besides plumbing, gasfitting, steam, hot water and hot air heating, and in the 14 years of its existence has grown and prospered.

Mr. Westman is also interested in a couple of local industries. One of these is the Chatham Malleable and Steel Company, manufacturers of children's hand sleighs and similar articles. The other is the Canadian Wolverine Company, the Canadian branch of the Wolverine Brass Company, of Grand Rapids, Mich., manufacturers of brass goods and plumbers' supplies—a concern which located in Chatham in 1907, Mr. Westman being largely instrumental in securing the industry for the Maple City. Of this company Mr. Westman is a shareholder, and a director.

Mr. Westman was not long in business before he was called to enter municipal life. He was elected to the city council in 1903, and has served (with one intermission) ever since then. Besides his five years' service as alderman, he has warmly interested himself in board of trade work. During the

MAYOR W. H. WESTMAN, Chatham.

past two years, his especial talents have found full scope in the post of chairman of the industrial committee of the city council, and he has kept a keen lookout for possible new industries for the Maple City.

Mr. Westman has taken considerable interest in Sunday School and temperance work, as well as in clean athletics, his Young Men's Club at Park Street Methodist Church being the nearest approach Chatham at present has to a Y.M.C.A. "Not yet forty and still unmarried," as he himself laughingly puts it, Mr. Westman has before him a promising future, alike in municipal, business and (possibly) matrimonial life.

Plans have been prepared by J. M. Cowan for the erection of a three-storey apartment house to be erected on McCaul Street, Toronto, at a cost of $10,000.

GET RID OF OLD STOCKS.

Turn your old stock into money. The goods that remain on your shelf day after day, month after month, steadily eat away your profits, besides adding to your taxes and insurance account. In addition, it is costing you in interest market value for the money invested, as well as taking up store room which should be put to better use than the accumulating of chestnuts. There is another point to be considered, and that is the lessening value of the merchandise from the deterioration which is constantly going on from unuse. Put a price on the old goods that will move them and give you some advertising as well. Then you can re-invest the money obtained from their sale in new, up-to-date and desirable goods that will pay you a profit which will go far to recoup the losses you have made on the undesirable merchandise disposed of. This is not a theory, but a practice of the best dealers in the country. No retailer ever became rich by nursing old stock.

The keynote of success in any business is profit. No dealer ever made a great success by simply cutting prices. Goods should be marked judiciously so as to nroduce good average profit. A great many dealers have an idea that to do business successfully and profitably all of a certain kind or class of merchandise should bear the same rate of profit. This is a vital mistake, and the effect of carrying it out would be to fill the store with slow-selling and undesirable stock. Primarily, articles should be marked at prices which will insure their sale, regardless of whether they produce a fair profit or not.

WESTERN GOSSIP.

Bell & Stewart, sheet metal workers, Vancouver, have registered.

H. M. Sheeves' hardware store at Rosebank, Man., was destroyed by fire.

The estate of M. Sutherland, Selkirk West, Man., sold his hardware stock to F. Cook.

G. R. Scuton, hardwareman, Foxwarren, Man., is succeeded in business by Dunlop & York.

J. Walden, hardwareman and plumber, North Vancouver, has sold his business to McMillan & Paine.

Whyte, Orr & Welles, hardware merchants, with stores at Daysland and Hardisty, Alta., have dissolved.

A. C. Gourley, hardware and furniture dealer, Wetaskiwin, Alta., is succeeded in business by N. W. Gould.

Scott Bros., hardware merchants, Lloydminster, Sask., have changed the firm name to The Northern Hardware Co.

Ritz & Zoerger, hardware and implement dealers, Humboldt, Sask., have sold their implement business to McLeod & Russell.

Skelding & Jackson, Neepawa, Man., report business good in their lines of work and are busily engaged installing furnaces in many of the new houses which have been built this season.

---

ance knows a whole lot more than some people, and he stands a better chance of making good.

Store Cleaning Time

The Christmas rush is over and hardware merchants will find the next month the most opportune time to make those changes in their stores which they have probably been contemplating for some time.

It will pay you to get your store in good shape before the Spring rush commences.

If you want a new show case or counter and wish to dispose of your old one, first write out a brief description of it, insert in HARDWARE AND METAL and you will no doubt find some dealer between Halifax and Vancouver who is looking for a chance to buy at a reasonable figure the very articles you wish to sell.

Do you want to buy a new desk? A "want ad" will find some dealer who is re-arranging his store and is anxious to dispose of such a desk at a bargain price.

Have you a set of tinner's tools for sale?

Do you wish to sell some old shelf boxes in order that you may replace them with new ones?

Have you a screw cabinet, a wire cloth rack, a rolling step-ladder and all those fixtures which make your store look neat and enable you to give your customers quick service?

There are a hundred little services our "want ad" department can perform for you.

Rates (payable in advance)

2c. per word for 1st insertion.
1c. per word for subsequent insertion.
5c. additional each insertion when box number is required.

Hardware and Metal

Write or phone our nearest office.

MONTREAL TORONTO WINNIPEG

CONDENSED OR "WANT" ADVERTISEMENTS.

RATES.

Two cents per word first insertion; one cent per word subsequent insertions.

Five cents additional each insertion where box number is desired.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost must accompany all advertisements. In no case can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

RULES FOR COPY.

In addressing replies care of HARDWARE AND METAL don't fail to give box number.

Replies addressed to HARDWARE AND METAL boxes are re-mailed to advertisers every Monday, Wednesday and Friday.

Requests for classification will be followed where they do not conflict with established classified rules.

Orders should always clearly specify the number of times the advertisement is to run.

All "Want" advertisements are payable in advance.

AGENCIES WANTED

Manufacturers of hardware lines both at home and abroad watch our paper each week. If you want to secure the exclusive agency for any line for the whole Dominion, for a Province or for your own city or town you will find a Want Ad. will put you in touch with the right firm.

BUTTER TUBS—Manufacturers' agent in Winnipeg, excellent connection with jobbing trade, desires to represent manufacturer of wooden butter tubs. Box 1, HARDWARE AND METAL, Winnipeg. (6)

WE WANT TO SELL YOUR GOODS—Canadian and American established firms wanting resident selling agents for Canada write A. H. & R., Manufacturers Agents, 1757 Queen West, Toronto. (6)

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

AGENTS WANTED with good connection with hardware trade to handle a specialty which has had a good sale with hardware men and booksellers and stationers in the United States. The line has already been introduced to the bookseller trade in Canada, but separate agents are wanted for the hardware trade in Montreal, Toronto and Winnipeg. Apply, stating agencies you now have, to Box 779, HARDWARE AND METAL, Toronto. (6t)

WANTED in every town and village, a representative to take charge of the circulation of our various publications:—Hardware and Metal, Canadian Grocer, Financial Post, Plumber and Steamfitter, Dry Goods Review, Printer and Publisher, Bookseller and Stationer, Canadian Machinery, and Busy Man's Magazine. Good financial standing and business connection a strong recommendation. Just the position for a retired business man for his spare time. The MacLean Publishing Company, Limited, Toronto.

ARTICLES FOR SALE.

Don't keep any fixtures or tools around your store for which you have no further use. They are worth more to-day than they will a year hence. Don't keep money tied up which you could use to secure discounts from your wholesaler.

BUSINESS CHANCES.

Does your business need more money? Would you like to secure an active or silent partner? An outlay of 50c. or $1 for a small ad. under the heading, would probably put you in touch with the right man.

PATENT NOTICE—The owners of Canadian Patents Nos. 95125, 95126, 96650 and 102647, for improved processes for working silica glass and making articles out of fused silica, and for an improved furnace for working silica, are desirous of finding Canadian manufacturers who will take a license under their patents. The processes are being satisfactorily carried out in Great Britain and a considerable number of articles are being made and sold. Applications for licenses may be addressed either to THE THERMAL SYNDICATE, Ltd., of Neptune Bank, Wallsend-on-Tyne England, or to OWEN N. EVANS, Solicitor of Patents and Expert, Merchants' Bank Building, Montreal, Canada. (5)

BUSINESSES FOR SALE.

Somewhere in Canada is a man who is looking for just such a proposition as you have to offer. Our "For Sale" department brings together buyer and seller, and enables them to do business although they may be thousands of miles apart.

ESTABLISHED tinsmith and furnace business for sale in best building district in Toronto. Have installed 216 furnaces in season of 1907-1908. Reasons for selling, leaving the city. A full set of tools and machines. Cheap rent. Have 25 furnace contracts already signed for 1909. Apply Box 780, HARDWARE AND METAL, Toronto. (4)

HARDWARE BUSINESS FOR SALE in one of the finest farming sections of Ontario. Two railways. Stock about $4,500. Good reasons for selling. Address Box 782, HARDWARE AND METAL, Toronto. (11)

HARDWARE, tinware and furniture for sale.—Stock between five and six thousand. Doing a good business. Good reason for selling. Apply Box 781, HARDWARE AND METAL, Toronto. (7)

BUSINESSES WANTED.

The business of your next door neighbor may be for sale, and you would not know anything about it. The only way to get replies from the trade everywhere, is to advertise in a paper which reaches the trade everywhere in Canada.

MISCELLANEOUS

ADDING TYPEWRITERS write, add or subtract in one operation. Elliott Fisher, Limited, 129 Bay Street, Toronto.

A MARKET OF BUYERS, backed up by money to spend, is open to you in the Busy Man's Magazine. Every territory in Canada is represented. If you have something to sell, something you want to buy, a condensed advertisement in the Busy Man's Magazine will put you in touch with the classes you want to reach. Four cents per word will carry your message from Atlantic to Pacific. Send copy of your advertisement along with order to cover cost of insert on. Your announcement will appear under a special heading, BUSY MAN'S MAGAZINE, Montreal, Toronto, Winnipeg.

BETTER, CHEAPER, SAFER LIGHTING.—The Pitner System of gasoline lighting is the best system yet produced for lighting a store, hotel or public building. In cities and towns Pitner systems are used because of the superior quality and quantity of light obtained for small cost. They are just as successful in any village or country place. A small outlay secures a complete and independent Pitner lighting plant. Free illustrated booklet and full particulars on request. The Pitner Lighting Co., Limited, Toronto, Canada.

CANADIAN MACHINERY AND MANUFACTURING NEWS, $1 per year. Every manufacturer using power should receive this publication regularly, and also see that it is placed in the hands of his engineer or superintendent. Every issue is full of practical articles, well calculated to suggest economies in the operation of a plant. Condensed advertisements for "Machinery Wanted" inserted free for subscribers to the GROCER. "Machinery for Sale" advertisements one cent per word each insertion. Sample copy on request. CANADIAN MACHINERY, 10 Front St. East, Toronto.

HIGH CLASS COLOR WORK; Commercial Stationery, Posters. The Hough Lithographing Co. Limited, Office—No. 3 Jarvis St., Toronto, Telephone, Main 1576. Art, Good Workmanship; Business Methods.

IF INTERESTED in a Duplicating Machine for getting out circular letters, reports, price-lists, etc., or for printing various office forms, write for booklet and samples of work. The "POLYGRAPH" is the newest, latest, and best, and sells for a lower price than the others. Is unexcelled by any similar device on the market. F. W. Tenney, Canadian Sales Agent, 123 Bay Street, Room 116 Stair Building, Toronto, Can. (tf)

IT PAYS FOR ITSELF—The money you are now losing because you haven't a National Cash Register, would pay for one in a short time. The National Cash Register Co., F. E. Mutton, Canadian Manager, cor. Yonge St. and Wilton Ave., Toronto, Ont.

THE RELIABLE LIGHT will light your store 100% better than gas, electricity or acetylene. 600 candle power light costs 1 cent per hour to operate. Thousands in use. A safe, reliable, pure white light of intense brilliancy. Write for booklet M. The Rice, Knight Mfg. Co., Limited, 40 Lombard Street, Toronto.

TECHNICAL BOOKS

HARDWARE WINDOW DRESSING—This book, just off the press, contains 256 pages (8x11 inches) and over 200 illustrations with full working descriptions. Every display is the work of an expert. It illustrates and explains how hardware windows may be dressed to sell goods. Price $2.50 post paid, The MacLean Publishing Co., Technical Book Dept. 10 Front St. East, Toronto.

Hundreds of our graduates now holding good positions we secured for them, with reliable firms. Many who had no former experience now earn $100 to $500 monthly and expenses. If you want to secure a good position and increase your earnings our Free Book, "A Knight of the Grip" will show you how. Send for it today. Address nearest office. Dept. 238, NATIONAL SALESMEN'S TRAINING ASSOCIATION, Chicago, New York, Kansas City, Minneapolis, San Francisco.

WESTERN CANADA HARDWARE MARKETS

Corrected by telegraph up to 12 noon Friday, Room 511, Union Bank Bldg, Winnipeg.

Winnipeg, Jan. 19.—The sharp, cold weather has given place to a strong wind from the south that is blowing something of a blizzard, but is very mild. Railway traffic is being delayed to some extent, but nothing serious is anticipated. Further west, in Alberta, the sudden rise in temperature is a great relief as the continued extreme cold was very bad for stock. Fortunately there was not much snow at the time, so that forage was not covered and the cattle when they ventured from the shelter of bluffs and sheds were able to get plenty to eat. This puts matters on a very different footing to what they were two years ago when the snowfall was heavy and followed by very cold weather.

One of the surprises to people arriving in Winnipeg is the fact that during the very coldest days we have had this winter, the erection of the structural steel has proceeded steadily on the new Union Depot for the C.N.R. and G.T.P., several thousand tons having been put in place in the past two weeks. This is not the only building on which steel is being erected during the winter months, but it is the largest.

A real estate deal of more than usual interest went through during the week. This was the sale of the northwest corner of Lombard and Rorie Streets to the Great West Life Company. The block sold was 100 feet square and the price was $1,000 per foot. The price was nothing out of the way, though it is a good one, but the old and extremely ramshackle building that now occupies the premises was, in the days that have gone by, the home of Winnipeg's first Post Office. At that time Lombard Street was known as Post Office Road, and this building was marked No. 16 on the very crude little map which appears in Begg's "Ten Years in Winnipeg," which is now out of print.

The property mentioned is right across Rorie Street, from the new Grain Exchange, and as soon as possible in the spring the Great West Life will commence the erection of a handsome three storey re-enforced concrete office building for their own use. History repeats itself, for in the days when the Red River was the chief means of communication Lombard Street, or Post Office Road, was one of the business centres. For years all business drifted away from it, excepting of the poorest and most peddling kind, and now business is going back to it by leaps and bounds. A few years ago one of the largest cold storage and creamery plants was erected at the foot of the street close to the river, and transfer tracks; next came the Kemp Manufacturing Company; then the Great West Wire Fence Company; then Telfer Bros., biscuits, and MacNab & Roberts, manufacturers' agents, all erecting fine brick and concrete buildings; last year the Winnipeg Grain Exchange and now the Great West Life Assurance Company. Each additional business planted on this street has witnessed a substantial increase in the prices paid for real estate.

To Erect Sub-Station.

Another real estate deal that carries with it much more than the mere transfer of a block of land at a good figure, is the purchase by the Canadian Pacific Railway just north of Portage Avenue on the spur track of the Great West Development Company on the Western boundary of the city of a large block. This site has been secured by the railway for the purpose of erecting a substation for freight. The C.P.R. has bought the spur as well as the land along it, and this purchase and the erection of the freight sub-station is necessitated by the rapid development of manufacturing of various kinds in that part of the city. In addition to a number of factories already in the neighborhood several large industries have under consideration plans for the erection of buildings next spring. Four years ago this section of Winnipeg was open prairie, and now it needs a sub-station for freight. The matter needs no comment.

A Romance in Wheat.

A new and very interesting development in the culture of winter wheat has come to light in Alberta.

It is some 25 years ago that Francis Wilcock, formerly of Ontario, made the first attempt at growing winter wheat in Alberta and the experiment was made at Pincher Creek. Mr. Wilcock farmed for a time in Manitoba, and having decided to try his fortunes in the then just opening Territory of Alberta, sold out his Manitoba farm and went to his old home in Ontario for a visit before starting for the further west. When he reached his old home, fall wheat cutting was in progress. It was some years since he had seen fall wheat, and struck with the beauty of some of the heads—the variety was Dawson's gold chaff—he plucked them and put them in his pocket intending to show them to his wife when he reached the house. His attention was taken by something else and he forgot about the wheat. The coat was packed hastily when the time came to leave and the wheat was still in the pocket. When he reached Alberta it was about the middle of August, and coming across the wheat one day, he thought he would try it. There was a little patch that some previous occupant had used for a garden. This he dug carefully and planted the grain taken from the three or four heads. The wheat came up quickly and showed a fine, strong growth, but one morning he found that the gophers had eaten all but about a dozen stalks. Over these he placed a puncheon that had held the family crockery on its trip, having first removed the bottom. This preserved the few stalks, and the next spring it came up all right, and in due time was reaped and rubbed out by hand. It was sown again that year and from this small beginning has come the fall wheat industry of Alberta. A great many Americans, and, alas, a great many Canadians, continue to delight in attributing the first growing of fall wheat in Alberta to the Mormons. This is the true story.

But to return to the present developments. With the passing of the years and the increase of farming, came the introduction of Kansas Turkey Red wheat into Alberta. The first seed was brought in by the C.P.R., and was distributed for experiment in 1899. It was an almost immediate success. It seemed as if Alberta had been waiting for Turkey Red. The writer has a sample taken from the first car of seed brought in and a sample of the wheat raised from that seed on the second crop, and it is hard to realize that the two are the same variety of wheat. Not only are the berries large, and more uniform, but they have attained much of the flinty appearance so characteristic of Red Fyfe and not in appearance only, for Turkey Red grown in Alberta is nearly as hard again as Turkey Red grown in Kansas. And now comes the crux of the story.

While Turkey Red in Alberta has been forging ahead, giving large yields, increasing in density and in beauty of appearance, Turkey Red in Kansas has been growing steadily behind until that State is confronted with the necessity of getting seed from outside or going out of the wheat raising business. The eyes of the farmers of Kansas have turned to Alberta as a source for good seed, and one of the big commission houses of that State sought the assistance of the C.P.R. land department. The commissioner, Mr. Griffin, furnished them with an average sample, and this company has reported that in their opinion this is the very best seed that Kansas can procure. Of course the duty at the present time is prohibitive, but the farmers of Kansas are making a most strenuous effort to have Congress view this need for good and pure seed in the right light, and to have regulations that will permit of Kansas securing seed from Alberta to take the place of what has so completely run out.

Hardware Markets.

While business is more active than in January of last year there is nevertheless the usual after-holiday lull and the cold weather during the first half of the month did not help business any. Travelers are all on their routes again and the outlook for spring business is most encouraging.

A very pretty event took place in London on Thursday, Jan. 7, when R. E. Scott, Regina, representative of the Hobbs Manufacturing Co., London, joined the ranks of the benedicts.

The young couple were the recipients of a large number of valuable presents, among which was a handsome silver tea service, presented by the employes of the London, Toronto and Winnipeg branches of the company. Mr. Scott, in acknowledging the gift, made a speech lasting almost an hour. He enjoys the acquaintance of a large circle of friends in the West, and no doubt they will appreciate the increased responsibility which he has taken upon himself.

G. R. Nimmo, representing the Canada Paint Company, Montreal, between Montreal and Toronto, is at present taking charge of the ground in Nova Scotia and New Brunswick usually covered for the company by James Craig, the latter unfortunately being ill.

When writing advertisers kindly mention having seen the advertisement in this paper.

Letters from the Sales Manager.

The Lion's Share of the Business.

Messrs. Barry & Butler,
Allentown, P. Q.

Gentlemen:-

I am glad to hear that you have accepted the Sherwin-Williams agency. Your goods are being shipped today.

From this time forward I shall do everything possible to make the association mutually pleasant and profitable. We will immediately start our system of advertising and personal selling helps working to direct all possible business to your store. Our plans for helping our agents move the goods from their shelves are so strong and have produced such excellent results, almost without exception, for agents who have co-operated with us closely, that I am confident we can help you to get and keep the lion's share of the paint business in your locality, if you will work with us enthusiastically.

We are enclosing price list and discount sheet, and are forwarding with your order a supply of color cards, together with a liberal assortment of advertising features for counter distribution and display purposes.

Again assuring you of our desire to assist you in every way and thanking you for your order, I am

Yours very truly,
C. C. BALLANTYNE.

Cutting Patterns in the Tin Shop

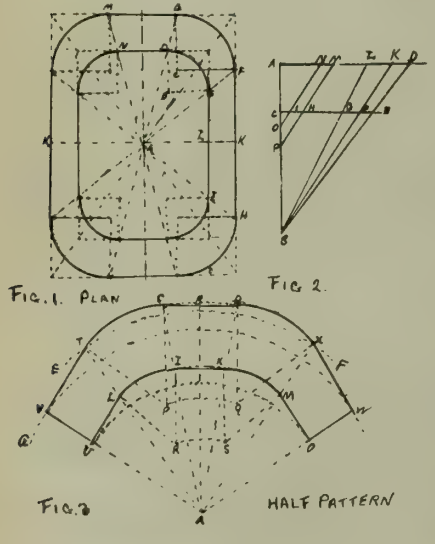
Readers of Hardware and Metal Are Requested to Make Use of This Department—Questions Regarding Patterns Will Be Answered By Experts—Discussion is Also Invited on Any Matter Pertaining to the Tin Shop.

PATTERN FOR OBLONG PAN.

To describe a pattern for an oblong pan, with round corners, tapering more at the ends than at the sides. Let Fig. 1 be the plan. Draw the larger rectangle and the diameter lines, also the diagonals, and from the diagonals draw the four lines showing the width and length for the bottom.

From C as centre, describe the quarter circles (any size required) for the corners as G F and from the points G and F draw lines to the centre A, which will give a proportionate size for the corner of the bottom, as shown by the curve D E drawn from B as centre.

To obtain the radii required in Fig. II., draw A B and A D at right angles. Let A C equal the upright depth required, from C draw C E parallel with A D. Take the lengths A G, A F and A K (Fig. 1.) to A D, A K and A L (Fig. II.) also the distances A D, A E and A L (Fig. 1.) to C E, C F and C G (Fig. II.) and draw lines from the



points D E, K F and L G to cut the perpendicular line A B at B (all cut at one point). Take the lengths from C to G and B to D (being the radii of the corners) and carry them from A to M and A to N and draw the lines M P and N O parallel with K F. Draw the perpendicular line A B (Fig. III.)

Take the lengths of B D, B K, B L (Fig. (II.) as radii and from A as centre describe the curves C D, E F and G W (Fig. III.), also take the radii B E and B G and from the same centre A (Fig. III.) draw the curves I K and U O. Then carry the length M G (Fig. I) on the curve C D (Fig. III.) and draw the line C A, D A and C D.

From the points C D I K draw perpendicular lines as C P, D Q, I R, K S. Take the length P M (Fig. II.) and carry the same from C to P and D to Q (Fig. III.), also take the length O N and mark off the same from I to R and K to S. From P and Q as centres and P M radius strike the curves C T and D X to meet the curve E F, draw the lines T P and X Q, also the lines T A and X A. From R and S as centres and with O N as radius describe the curves I L and K M.

Now take the distance from F to K (Fig. I.), and mark off the same distance from T to V on the curve G, also the same distance from X to W and draw lines from V to A and W to A. Draw the lines from T to V and from X to W, also L U and M O, which forms one-half of the pattern.

Edges must be allowed.

W. M. M.

MUST KNOW YOUR GOODS.

"I find it absolutely necessary in handling ranges to have an exclusive agency for a trade-mark range and be thoroughly familiar with the line we carry, as well as our competitors' lines," said a successful hardware dealer the other day. "To sell stoves requires more talking on the salesman's part than it does for the traveling men to sell merchandise to a buyer. The stove salesman must be enthusiastic over the line the buyer has bought for him and must feel that he has the right goods at the right prices.

"A woman looking for a gas or steel range is not going to purchase the first stove she looks at, but will look around and shop in every store she can before she makes up her mind. The stove that is not fully explained stands no chance of being sold except at a ridiculously low price. Stoves are sold by furniture houses and department stores, and the gas companies advertise gas ranges extensively, all of which makes it a hard proposition for the hardware store to compete with the others without expert salesmanship and the right goods suitably priced.

ADJUSTABLE PIPE ELBOW PATTERN.

A machine designed for laying out pipe elbow mitres, and one that should prove useful to tinsmiths, is the McDonald Adjustable Pipe Elbow Pattern recently patented in Canada and the United States and put on the Canadian market by W. H. Johnston, New Glasgow, N.S. The machine is in two parts and is made in three sizes. By the use of this pattern machine the mitre for any angle from zero to 90 degrees for an elbow in any number of pieces can be accurately determined in a few seconds without the use of drawings or sheet metal patterns. The device does away with the necessity of trimming, and the makers guarantee the pattern machine to do the work properly. The machine is finished in dull nickel, is strong and durable, and with ordinary care should last a lifetime. The time ordinarily consumed in laying out pipe elbow mitres is saved by using this pattern and the money so saved in a year by doing away with this waste, say the makers, will more than pay for the machine.

Hardware Letter Box

Any questions on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

Smallwares—"Subscriber," Brantford, asks for the maker of Allwyn folding go-carts, also for makers of lines for 5, 10 or 15-cent counters.

Allwyn Mfg. Co., Toledo, Ohio, make the go-cart. Canadian tinware manufacturers; Ontario Novelty Co., 7 Scott St., Toronto; and the Parker Wire Goods Co., Worcester, Mass., are concerns which might be written to for suitable lines for bargain counters.—Editor.

Telephone Supplies—D. Mistele, Rodney, asks for the addresses of makers of telephone supplies.

The following manufacturers of telephone goods have offices at Toronto: Canada Machine Telephone Company, Duncan St.; Norton Manufacturing Company, 84 York St.; Dominion Telephone Manufacturing Co. and Swedish-American Telephone Company, 157 Bay St.; Stromberg-Carlson Telephone Manufacturing Company, 109 Victoria St.; Electrical Specialties, Limited, 12-16 Shuter St.; and the Citophone Co., 134 John St.—Editor.

Plaster of Paris—A. S. Hunter, Durham, Ont., asks for the address of the manufacturers of plaster of paris.

The Albert Manufacturing Co., Hillsboro, N.B., are manufacturers and the Ontario Lime Association, Toronto, jobbers in lots of carloads or under.—Editor.

Copper Coil—Bowes, Jamieson & Co., Hamilton, ask for the names of manufacturers of copper coil for hot water heaters.

The James Morrison Brass Manufacturing Company, Adelaide St. west, Toronto; Booth Copper Co., 115 Sumach St., Toronto; and the Canadian Seamless Wire Co., 71 Adelaide St. west, Toronto, are makers of these goods.—Editor.

Gas Stoves—Mahoney Bros., Guelph, ask for the address of the Standard Lighting Co., makers of gas stoves.

The above concern is located at Cleveland, Ohio.—Editor.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal waterworks and sewerage systems, railway or mining news, etc.

Industrial Activity.

The Collingwood Shipbuilding Co. intend to greatly enlarge its plant at that place.

The Toronto Railway Co. will build new car barns to accommodate a hundred cars.

Philadelphia interests are said to be urging the Polson Co. to double its shipbuilding yards at Toronto.

Toronto and Philadelphia capitalists are reported as going to build a shipyard and drydock at Sandwich.

Work on the new Thunder Bay elevator at Port Arthur has commenced and a great many men are employed.

The first trainload of material for the new steel plant at Cobourg was shunted into the yards of that concern this week.

Alberta, Saskatchewan, and Manitoba are said to have agreed to build and equip a number of publicly-owned grain elevators in the West.

The Trinidad Telephone Co. is a new concern which intends to manufacture telephones and electrical instruments and appliances at Halifax.

A large deposit of silica has been found at Amherstburg and it is probable a glass factory will be established at Leamington in consequence.

Municipal Undertakings.

A gas plant for Fort William is again being brought to the front by the City Council.

Renfrew ratepayers have approved a by-law to expend $5,000 upon sewer extensions.

The ratepayers of Galt have approved a by-law to raise $12,000 for electric light extensions.

The ratepayers of Stratford have carried a by-law to spend $25,000 on sewage disposal works.

The ratepayers of St. Thomas have approved a by-law to raise $40,000 for septic tanks for city sewage.

The by-law to provide for the cost of a new filtering basin for the Meaford waterworks has been carried.

The Canada Iron Corporation, Fort William, was awarded a contract for 12,300 feet of 18-inch water main for that town.

Winnipeg has declared for a municipal power plant and work will be commenced at once on a plant on the Winnipeg River.

The Ontario Railway and Municipal Board have approved a by-law to raise $28,000 for sewer construction at Fort Frances.

A. F. Macallum and T. Aird Murray, consulting engineers, Toronto, are preparing plans for the instalation of the proposed sewerage system in New Toronto.

A company of U.S. men propose drilling for gas in the vicinity of Peterboro and wish to get a franchise from that city and from Lindsay for the supply of same.

John Gunn & Sons, Winnipeg, have the contract at $779,100 for the general works at Point du Bois, in connection with Winnipeg's power scheme. The Northern Aluminum Co., Shawinigan Falls, has the transmission line aluminum cable contract at $148,050, and the steel towers contract goes to the Manitoba Iron Yorks, Winnipeg, at $87,500.

The Ontario Power Company are preparing plans for the construction of a new pipe line to increase their capacity of electric power by 65,000 horse power, and work will be commenced early in the spring. The work is made necessary to handle the contract with the Hydro-Electric Commission. The tunnel will be of steel, lined with concrete, and will be 30 feet in diameter and about a mile in length. The work will cost over three-quarters of a million dollars. With the new line the company will be able to develop 180,000 horse power.

Railway Development.

The G.T.P. will run regular through trains between Winnipeg and Edmonton in the spring.

The Sydney-East Bay Electric Tram Railway will build seventeen miles of road this year.

The T. & M. O. propose tapping the Elk Lake and Gowganda districts by a branch line this spring.

The Canadian Northern will construct a line from Macleod to the Great Northern Railway at the Montana border.

The Prince Albert & Hudson's Bay Railway is applying for permission to construct a line from Prince Albert to York Factory.

Fort William is asking the Provincial Legislature to sanction a debenture by-law for $170,000 for the extension of the street railway system.

The Eastern Ontario Counties Electric Belt Line Railway propose to connect Cornwall, Brockville, Morrisburg, Winchester and Ottawa with a line this year.

An electric railway is proposed to be built between Cobourg and the Kawartha Lakes, and another from Cobourg to Havelock. Each line will be 30 miles long.

The Canadian Northern and the G.T.P. will build 700 miles of road in Saskatchewan this year, the Provincial Government guaranteeing $13,000 per mile.

Malcolm McPherson, Freelton, Ont., has been appointed by John Patterson, Hamilton, to buy the right-of-way from Freelton to Guelph for the projected electric road of the Hamilton & Guelph Railway, of which Mr. Patterson is the promoter.

The St. Mary's & Western Ontario Railway is applying for permission to construct lines from Woodstock to Brantford; St. Mary's to Stratford; St. Mary's and Exeter branch to Guelph, and Goderich branch, and from Exeter to Grand Bend.

Public Buildings.

Ashbury College, Ottawa, will be rebuilt on a new location this year.

The Ottawa Separate School Board propose to build two new schools this year.

Chas. Bernier has prepared plans for the erection of a school at Montreal for the Catholic school commissioners at a cost of $60,000.

The ratepayers of Waterloo, Ont., have carried a by-law to raise $15,000 for the building of a ward school and $3,000 for the erection of an isolation hospital.

Toronto ratepayers have approved a by-law in favor of a grant of $50,000 to each of four hospitals—the Western, Grace, St. Michael's and the Home for Incurables. This money will be used to extending the buildings.

General Building Notes.

Calgary expects a building boom this year.

James Ince will build a $10,000 residence at Toronto.

A new $400,000 hotel is proposed to be built at Montreal.

The Sun Life Assurance Co. will erect a large office building at Montreal.

The Robert Simpson Co., Toronto, will erect a large brick and stone stable.

W. H. T. Stevens, Toronto, will build three pairs of dwellings at a cost of $10,000.

J. S. Mitchell will build a large business block at Sherbrooke, as will also H. C. Wilson & Sons. McKenna Bros., of the same place, will erect a new store, and a number of residences will also go up.

New Companies.

Electric Railway Supplies, Toronto; capital, $40,000; to manufacture railway supplies. Incorporators, S. Johnston, W. N. Tilley, A. J. Thomson, all of Toronto.

Canada Fertilizer Co., Montreal; capital, $175,000; to manufacture and deal in fertilizers. Incorporators, E. M. Sliney, B. Stevens, R. E. Waggaman, all of Montreal.

Ontario Metal Culvert Co., Guelph; capital, $55,000; to make metal culverts and galvanized products. Incorporators, R. W. Gladstone, D. Gladstone and H. B. Sharman, all of Guelph.

McIntyre & Taylor, Toronto; capital, $20,000; to manufacture and deal in merchandise composed of wood, cement, oils, metals, etc. Incorporators, E. C. Ironside, H. Riley, R. R. Perry, all of Toronto.

The Berlin Central Heating Co., Berlin, capital, $80,000; to construct and operate works for production of steam, hot air or hot water, for power and heating purposes; also to distribute natural gas. Incorporators—J. D. Moore, P. S. Lantenschlager, C. H. Doerr, all of Berlin.

News of the Paint Trade

PAINT MANUFACTURER HELPS.

If a hardware dealer were only to set himself down to consider seriously the ever-occurring question of how to sell paints successfully, he would be astonished to find how easily the problem can be solved. Many merchants seem to look upon their paint department as something totally different from their other hardware lines, and to ignore the fact that the policy pursued in pushing sales in one direction would be equally successful in the other. Why there should be any perplexity as regards the pushing of paints we cannot understand. In fact, at the outset the paint department is much more advantageously placed than, say, the builder's hardware, or any other branch, because the merchant is so thoroughly helped by the manufacturer. He can not only supply himself with any amount of attractive advertising matter, artistic hangers, colored plates, and so on, but most paint houses go to the extent of publishing hints as to how the dealer can best work out a selling campaign, and are ready to back him up with the advice born of long experience and knowledge. The manufacturer does his share, and more than his share, in helping the dealer.

The paint department, therefore, starts out with this great advantage. Now if the dealer only follows out the progressive policy we presume he pursues in his other departments, the selling of paint should be easy. Many merchants stock their paints in a back portion of the store, probably in a place where there is little light. Does he place his builder's hardware there? No. Then why the paints? In the old days of oil and lead there might be some reason for that; there is none now, when ready mixed paints are put up in such clean and attractive form. Place the paint department, then, where attention is easily directed, and where the hangers and show cards get the greatest benefit of the light, so that a customer, in entering the store, may see the colored plates of artistic house painting and be struck with a desire to have his own house look as well.

Then the paint department should be given a fair share of window space. Many merchants seem to think that paints do not lend themselves to display. Nothing is further from the case. With the various colored labels, tins, sets in pyramidical form or in any other design look extremely well, and with the help of hangers of beautifully painted houses, the passer-by is probably more quickly attracted than by any other form of window display. There is color to the window, and color attracts.

Paint displays should be run frequently, not once a year, and especially during the spring and fall months. The dealer should make himself strong on all those talking points he can secure from the printed matter of the manufacturers, and from their salesmen. Follow up the property owners in the district, not only personally, but send to the manufacturer, who will follow them up as well. Thus the merchant gets the benefit of strong co-operation. By studying the pushing of his paint department, a progressive dealer can make that branch of his store most profitable.

Better Varnish

THERE is no good reason why your store should not do the biggest varnish business in town. It will come to you of itself if you stock the varnish that perfectly satisfies people who know varnish. Those people don't take long to find out the quality there is in every brushful of

Elastilite Varnish

The varnish that makes good, indoors or out. Comes in tins only—half-pint to gallon sizes. Made solely by

Oiled and Annealed Wire

The question of price alone is not the only thing to be considered in buying this article.

It pays to buy wire that is annealed to the proper degree and carefully oiled so as to present a fine dry surface and therefore easily handled.

Our wire excels along these lines, and, in consequence, gives the best results.

Specify "M.R.M." brand when ordering.

The Montreal Rolling Mills Co.

Paint and Oil Markets

MONTREAL.

January 22.—Notwithstanding the severe weather the demand is brisk, and great stimulation has been given to the paint and varnish trades generally. All lines are experiencing the good movement and manufacturers are much encouraged.

Turpentine and linseed oil are firm at unchanged prices. Linseed is on the quiet side. The change in the situation owing to the understanding between crushers will give stability to the market. It is evident that the trade has not yet thoroughly grasped the new order of things. Paris green is back again at list prices. Travelers report a very encouraging tone among the paint dealers who are emerging from their stock-taking in very confident shape.

TURPENTINE—Turpentine maintains the advance noted last week, and the market is very firm. Shipments are good, and inquiries are most encouraging. We quote 58c for single barrels.

LINSEED OIL—Linseed oil is inclined to be on the quiet side. The trade is evidently taking some time to digest the new figures which were issued recently, and which will exist without change. Whether the advance will act as a stimulus as is often the case and encourage more free purchasing, remains to be seen. We quote: Raw, 1 to 4 barrels, 59c; 5 to 9 barrels, 58c; boiled, 1 to 4 barrels, 62c; 5 to 9 barrels, 61c.

GROUND WHITE LEAD—There is a strong undercurrent in the ground white lead market owing to a seasonable demand which is just beginning to assert itself. It is felt that a strong spring trade will give stability to all lead products, and many of the hardware trade are not slow in booking their orders for immediate and spring shipments at present quotations, which are strictly pure, $5.50 to $6, according to brand; and No. 1, $5 to $5.50 f.o.b. Montreal.

RED LEAD—A steady inquiry is being experienced and orders are quickly filled. The market being in ample supply there is no change in figures. We quote: Genuine red lead, in casks, $4.50; in 100-lb. kegs, $5; in less quantities, at $6 per 100 lbs.; No. 1 red lead, casks, $4; kegs, $4.50, and smaller quantities, $5.50.

COLORS—Orders for liquid paints are very encouraging. Enamels, stains, and coach colors are feeling the stimulation that comes with an early spring demand.

PARIS GREEN—A lively demand has sprung up for Paris green, and while it cannot be said that extreme firmness prevails, orders are so encouraging that list prices are again being held. We quote: In barrels, about 600 lbs., 19½c; arsenic kegs, 250 lbs., 19½c; 50-lb. drums, 20c; 25-lb. drums, 20½c; 1-lb. packets, 100 lbs. in case, 21c; 1-lb. packets, 50 lbs. in case, 21½c; ½-lb. packets, 100 lbs. in case, 23c; 1-lb. tins, 100 lbs. in case, 22c.

WHITE ZINC—The call is extremely quiet, and there seems to be no response to the better trade conditions. We quote: Dry V.M. Red Seal, 7½c; Red Seal, 7c; French V.M., 6c; Lehigh, 5c; white zinc, ground in oil, pure, 8½c; No. 1, 7c; No. 2, 5¾c.

PUTTY—A sagging is being experienced in the demand for putty owing to the weather having hindered glazing operations. We quote: Standard putty, 880-lb. casks, $1.65; in 100-lb. drums, $1.90; bladder putty, 400 lbs., in barrels, $1.90; in 100-lb. cases, $2.05; in 25-lb. drums, $2; 25-lb, tins, $2.05; 12½-lb. tins, $2.25 f.o.b. Montreal.

TORONTO.

Jan. 21.—Continued steady improvement is noted in all lines this week. The travelers are the busy men just now and are sending in very encouraging orders for spring trade. Actual buying for present demand is quiet, but before the end of the month the warehouses will again have taken on their accustomed briskness. Factories are running full time preparing for the coming trade.

Prices are at the same quotations as last week. Glass is firm with stocks low. Oil and turpentine are quiet, though the latter line is meeting with some competition from poor substitutes sent in from the United States. Paris green is a good seller just now.

TURPENTINE—Single barrels, 60c; 2 to 4 barrels, 59c; and 5-gal. lots, 65c continue to be the quotations this week. A little more strictness is being placed on carrying out of orders. No change of quantity can be made once the order is sent in, say the jobbers, and goods must be accepted on the date mentioned in the order and at the price named therein. Some of the travelers say they have difficulty in getting turp orders because of a substitute turpentine put on the market by a United States concern and selling at almost ten cents a gallon less than the naval stores product offered here.

LINSEED OIL—Quiet trading is being done just at the moment. No doubt the majority of hardwaremen have sufficient stocks on hand and will not order again for some little time, and those who did not take advantage of the low prices are putting off buying until the last possible minute. Quotations are: 1 to 4 barrels, 59c for raw and 62c for boiled; and 5 to 9 barrels, 58c to 61c.

GLASS AND PUTTY—Firm in price are these two lines. Glass is 30 and 5 per cent. off stocks. The ruling quotations will likely last until the opening of navigation in the St. Lawrence, for stocks are low and large orders are sometimes split, so that there will be no depletion. Some buyers who tried to get glass in Belgium at less prices than those prevailing on this side of the ocean have been told that the glassmakers in Belgium made no money last year on account of low prices and that it would be impossible to fill orders at less than present quotations. Jobbers with low stocks have to pay the market prices for glass to fill their own orders.

GROUND WHITE LEAD—Still firm are the leads. No. 1 is at $5.40 to $5.65,

St. John Winnipeg

The Paint it Pays to Push

The contents of this can are a combination of the most durable Pigments, thoroughly ground in Pure Linseed Oil. There's not a better paint at any price on the market.

We are selling this high-grade paint at a price considerably lower than that asked for other paints for which absolute purity is claimed. Here's a test of quality. Take several clean pieces of board: paint one with a single coat of Moore's Paint: paint other boards with a single coat of any other paints on the market— then compare results. You will find the board painted with Moore's paint better covered with less paint than the others. Try it!

Prices and Color Cards on Request.

pure white from $5.80 to $6, and a superior line is at $6.25. Genuine red lead is at $4.50 in casks and $4.75 to $4.80 in 100 lbs.

STAINS AND VARNISHES — The anticipated advance has not yet come along, though with the rise in turps and oil quotations may go higher any time. Trading is fair.

PARIS GREEN—Steady again is this line. Prices are firm and at the same figures as last week. Barrels of 600 lbs. are at 19½c.

PETROLEUM—Prime white, 13½c; water white, 15½c; Pratt's astral, 17½c are still the quotations with good business being done.

KEEP PAINT SECTION CLEAN.

With the taking of the inventory and the cleaning up of the shelves generally, the hardwareman has a good opportunity of introducing improvements in his paint department. He should ask himself the questions, "Have I made the most of this department during the year just gone?" "Have I carried complete lines, and, above all, have I displayed my goods to the best advantage and kept this part of the store so clean as it should be?" By the unspoken answer to these questions should the merchant direct his course.

It is perhaps in the last point of all that merchants mostly err. Of course the nature of the lines handled in the paint department makes it more difficult for this section to be kept clean than say the builders' hardware department. But still with a little care even the handling of oil and putty can be done without soiling the floor and counters. If a customer has to be cautioned against rubbing against a dirty barrel, or a lady warned as to her dress dragging over an oil stained floor, or as to placing a sleeve on a counter greasy with putty and varnish, the store at once goes down in his or her estimation. The merchant not only fails to secure the customer's undivided attention, but a feeling of annoyance is engendered that tells against the store. The women folk are more than ever patronizing the hardware stores, and, therefore, it is essential that the paint department should be kept in neat condition.

Undoubtedly it takes a little time and care to get the paint section in good state, but the result is well worth the labor, and when the improvements are once made, they are not hard to keep going. See that the counters are clean, and free from cans, putty knives, odd pieces of glass and putty. Do not leave opened barrels of materials about or half emptied tins of paint in the way of being upset to the detriment of the floor and the danger of a customer's dress.

The various shelves, too, should be clean and tidy, with the labels on the tins attractively displayed. In fact, the paint department should look so well that a merchant should have a pleasure in taking a customer into it, and with no need of using an apology and a caution for the state of the floors and counters. Utilize some plan which will enable the various kinds of paints to be kept in most attractive condition. Put the dry colors into bins or drawers. The specialities should have a section of their own with a sign showing which is floor paint, which varnish stains, and so on. Keep the putty in a corner by itself and handle it carefully as well as all oils. When the department is well fixed up take special pains to keep it in that condition. In the long run it will prove of less trouble than an untidy department, besides being an advertisement in itself to all customers visiting the store.

START THE SPRING CAMPAIGN.

It is well for paint dealers to remember that a strong early spring demand is anticipated, and that therefore they would be wise in being ahead with their orders. With heavy trade there is always the possibility that manufacturers and jobbers may be severely taxed for a time, and if so the merchants might experience some delay in getting his goods. That delay may be very fatal, for no customer in his enthusiasm for early spring painting, cares to be told that if he wants to get certain paint from that particular store he will have to wait as the goods have not arrived. In addition to ordering early, the merchant should take into account the promise of the coming spring, and purchase more heavily. His stock is on the light side while the economy practised by the consuming public last spring will be departed from this year. There is no doubt that if orders are gauged by present indications and by future prospects of trade generally they will be substantial ones. As it has been pointed out, the spring order is worthy of careful consideration. Too large an order, which means a big surplus at the end of the year, cuts in heavy on the year's net profit. Too small an order is even more disastrous, for it means the losing of orders that cannot be filled. The overstocked condition is certainly the better of the two, for paint never goes out of style, and the large supply should move the dealer to greater efforts in getting rid of it. The man who buys carefully, however, and of whom it must also be said, luckily, fills his orders, and is not burdened at the year's close, is making the most out of his business.

PAINT TRADE GOSSIP.

W. H. Evans, Canada Paint Company, Montreal, has returned from a business trip to the Maritime Provinces.

For the convenience of business Brandram-Henderson, Limited, Montreal, have transferred their central office and works in Wellington St. to their offices and lead works at Mile End.

For business convenience McCaskill, Dougall & Co., varnish manufacturers, Montreal, have been incorporated as the Dougall Varnish Co., Limited. There is no change in the management the president of the new company being James S. N. Dougall, the vice-president, Gustaf Gylling, and the secretary-treasurer W. A. McGuinness.

Flattine Wood Finish

is an article that will appeal with equal strength to the professional painter and the handy householder who likes to do his own painting. Flattine Wood Finish is intended for the final coat over gloss finished work to give it the appearance of a rubbed finish without the labor and expense of rubbing with pumice stone and oil or water. Flattine Wood Finish is very durable and resists the action of water and dampness better than any varnish. It dries hard over night.

ALABASTINE

NO OTHER WALL FINISH IS SO WELL OR FAVORABLY KNOWN.

Makers of "imitations" of Alabastine have no confidence in their own products. They do not advertise them *extensively* in the magazines and newspapers. They prefer to snatch what trade they can on their pretended equality to Alabastine. They sell their goods on the reputation of Alabastine. But—remember no other wall finish is so well or favorably known—no other sells so readily as Alabastine.

Order direct, or through your jobber.

CURRENT MARKET QUOTATIONS.

January 23, 1909

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Amatite ROOFING

Needs No Painting

If you had a sample of Amatite in your hand you would see in an instant why it needs no painting or coating to keep it waterproof.

It has a rough surface of *real mineral matter* on the weather side.

It is evident to anyone that it is no more necessary to paint such a surface than it is necessary to paint a stone wall. Stone needs no paint; neither does Amatite. It is strong enough in itself to bear the brunt of rain and wind and sun without a protective coat of paint.

To paint Amatite would be a waste of time and trouble.

Amatite will last for many years without any care whatever. It is made to be *trouble proof* as well as *weather proof.*

A roofing that consists of smooth materials, made to receive a heavy coating of paint, is not a roofing at all—the paint is the real roof. If you are told that certain roofings don't need painting when first laid, don't be deceived into thinking that they are like Amatite. The first coat of paint has been applied at the factory—that's all, and it will wear off in a little while and require renewal.

No paint is good enough to make a durable roof; a thick layer of pitch faced with a real mineral surface, is far better—and that means Amatite. **Free Sample and Booklet**—A Free Sample with Booklet will be sent on request to our nearest office.

Selling Points

In selling Lawn Mowers your customer wants to know that the machine you are offering is a keen, clean cutter, an easy runner, and is strongly built. If you are offering a Tayor-Forbes machine you may guarantee perfection in those points.

All our machines are self-sharpening—cross-bars, girts and shafts being double the weight and strength of any imported machine. Steel plates for cylinders and knife-backs in all our machines are double the thickness of any imported machine All cylinder wings are made of malleable iron—cast iron is used in imported machines. All Taylor-Forbes machines are made with loose half-boxes and permit of quick and easy adjustment, while American machines, being made solid, cannot be adjusted. All wheels on our machines are three times the weight of any imported machine. The highly carbonized flat steel pawls on our machines are vastly superior to the little wrought iron pins used on imported machines

CARBORUNDUM

Carborundum is admitted to be with the exception of the diamond the hardest substance made and cuts all other abrasives with ease. The crystals are hexagonal in shape and possess a sharpness superior to all other cutting materials.

It is infusible at the highest and insoluble in any of the ordinary solvents.

Carborundum products embrace:—

Crystals
Grains
Powders
Wheels
Cup Wheels
Sharpening
Razor Hones
Combination Stones
Dental Wheels
Axe and Scythe Stones
Oil Stones
Rubbing Stones
Scouring Stones
Slip Stones

In fact every form in which abrasives can be used it has no equal.

Leave the Money in the Country Wherein You Expect to Make Yours

When You Sell Clipping Machines Sell the World's Best

They cost you less than cheaply constructed imitations and give a lot more satisfaction

This Stewart No. 1 Ball Bearing Clipping Machine

is made with cut steel gears (not cast) hardened file hard and running constantly in oil; the highest grade flexible shaft and the world famed Stewart one-nut tension clipping knife.

We guarantee that it must please the man who gets it better than any other machine made, or it can be returned to us for refund of all money paid out including transportation both ways

All Leading Jobbers in Canada Have It

CHICAGO FLEXIBLE SHAFT CO., 250 La Salle Ave., Chicago

McDONALD ADJUSTABLE PIPE ELBOW PATTERN

(Patented in Canada and in the United States.)

THE machine illustrated in this circular is designed for laying out pipe elbow mitres. With it the mitre for any angle from zero to 90 degrees for an elbow in any number of pieces can be accurately determined in a few seconds without the use of drawings or sheet metal patterns. For example: If a pattern is desired for a 12-inch, two-piece, 60 degree angle elbow, proceed as follows: Place bevel on sector (see Fig. 1), follow up the vertical line of figures near the right edge of sector, until figure 12 is reached, which represents the diameter of the pipe; then follow the line leading from 12 until it intersects the bevel blade, which will indicate the Fig. 7. Now set the upright scales on the machine to Fig. 7 (see Fig. 2) which will adjust the flexible spline at the top of the machine to the exact mitre required for a 12-inch, two-piece, 60 degree elbow. If a different diameter of elbow is required, unclamp the screws on the horizontal bars (see Fig. 2) which makes it possible to adjust the machine to any desired diameter. Fig. 3 represents the machine when it is set for a 3-inch elbow. The size of the device when not in use is 7¼ inches wide by 18½ inches long. This device is bound to prove a time-saver in any establishment where a considerable number of elbows are made. Assuming a foreman's time to be worth 30 cents per hour, if he saves an average of ten minutes per day by using the adjustable pattern, he will have saved enough money in one year to pay over 100 per cent. interest on the investment represented by the purchase price of the machine. As a matter of fact, any practical sheet metal worker knows that this machine will often save hours per day rather than minutes. There is absolutely no trimming required when a mitre is made by the McDonald pattern. The McDonald Adjustable Pipe Elbow Pattern is guaranteed to do the work we say it will do, and to be strong and durable. With ordinary care it will last a lifetime.

The machine, as represented in this circular, is No. 1, and includes all diameters from 3 to 12 inches. Finished in dull nickel finish. Shipments made f.o.b. New Glasgow for Canadian orders, and Boston for United States orders. The McDonald Pipe Elbow Pattern can be supplied in larger sizes on special orders.

No. 2, including sizes from 6 to 18 inches.
No. 3, from 12 to 30 inches.

H&R Guns and Revolvers

For over thirty-six years their superior shooting qualities accuracy and dependabil iy have been universally recognized.

Sold the World Over

We want you to have our *new* catalog showing complete line and giving valuable selling points

Here is our three-piece gun, which we call Model 1908. Built on the same lines as our famous Model 1900 in 12, 16, 20 and 28 gauge. This new gun is taken down in the same manner as a double gun—by pulling off the snap fore end and unhooking the barrel from the frame.

Notice the Target Grip

Light, compact, durable. The first combination of a medium priced revolver with *a perfect full grip*. Prevents slipping and twisting—insures a secure hold, because it fits the hand naturally, insuring confidence, which means a steadier aim and greater accuracy in the shooting.

Harrington & Richardson Arms Co.

1 in. B Wick, Cold Blast Globe

Finished in Red, Japanned and Baked. A very popular Lamp. Just the Lamp you want where a strong light is required to be spread over a large surface, as in livery stables, barns, saw and planing mills, warehouses, packing houses, workshops, picnic grounds, lawns, summer resorts, etc. The lamp shows a brilliant and steady light, and will burn as well out of doors as inside, without smoking or flickering, and is not affected by the wind or strong draughts. This Lamp can be used as a Dash Board Lantern, as it has a Dash Attachment.

Packed half dozen in a case.

This is positively the best lamp of its kind on the market, and although it has been imitated several times, nothing has yet been made to equal it. Send for sample order.

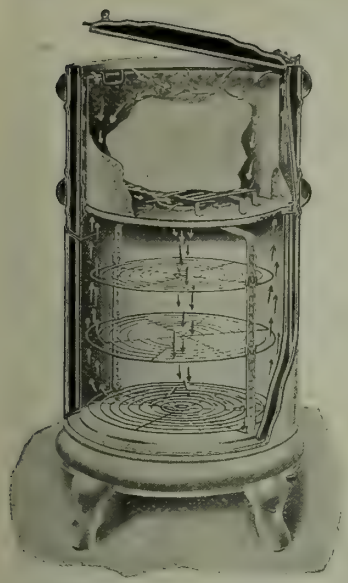
Hundreds of tons carried in stock for you and we guarantee prompt shipment. Write at once for a copy of our Monkey Book and for prices.

The Buchanan Foundry Company, - Lebanon, Pa.

Persons addressing advertisers will kindly mention having seen their advertisement in this Paper.



Here's the Refrigerator that sells at sight, and each one sold sends along another customer. The

White Frost Refrigerator

MADE entirely of galvanized sheet steel, 1 1-4 in. air space between walls; thoroughly insulated with "Aerofelt" and "Maltha," the best, most expensive insulation known to science. Heavily enamelled outside and inside (enamel baked on.) Not a splinter of wood in its construction. It can not shrink, warp, swell nor decay. Lasts a lifetime.

ROUND in shape. There are no nasty corners, no cracks or crevices for dirt and germs to gather. Turn in the hose and wash it out in a minute. The ONE absolutely Sanitary Refrigerator.

REFRIGERATION in harmony with Natural Law—maintaining a low, cool, pure, dry, equable temperature in hottest weather, preserving all foods sweet and untainted all the time—and most economical in ice. Perfect refrigeration guaranteed—and this guarantee based upon five years' successful usage in all parts of the country—Experience has proven the sanitary excellence of the "WHITE FROST." (see cut)

REVOLVING SHELVES do away with all "reaching over" to get an article — prevent spilling-accidents, and make easy use of every inch of shelf space. Shelves quickly removable and easily replaced. You can take the whole "innards" out in two minutes and put them back in less time.

ENAMELED in pure white outside and inside; trimmings of solid brass; perfect lock; ball-bearing castors; make the "WHITE FROST" the handsomest, best and most convenient and absolutely sanitary Refrigerator on the market.

WOMEN fall in love wth the "White Frost" soon's they see it. Sales are made without loss of time. Every customer is delightfully satisfied.

IF YOU want the Refrigerator trade of your city, you want to sell the "WHITE FROST." Get orders in now and guard against disappointment. Catalogue on request.

Congo Roofing

Backed by a Surety Bond

Hereafter every roll of Congo Roofing which we sell will be found to contain a Bond of the National Surety Co., guaranteeing the durability of Congo Roofing.

Our 3-ply grade is guaranteed for *ten years* and provides that if the roofing fails to give satisfactory service during that period, you are entitled to a complete new roof *free of charge.*

We cannot dodge this guarantee.

The Surety Company's capital backs it up to the letter. It gives you absolute protection.

You don't need to know what Congo is made of or what it looks like; you know that it is going to last you ten years at least and that is the kind of service you want.

Let us have your name and address and we will be glad to send you a copy of the guarantee, together with samples of Congo and booklet telling all about it.

Why the "Galt Kind" Pays the Dealer——

The high quality of "Galt" Sheet Metal —its features of design and construction —has already established a reputation in every locality where it has been used. There is money in this reputation for the Hardware man who is introducing or selling Sheet Metal Building Goods.

1909 will certainly bring a big demand for Metal Roofing, Siding and Ceiling and Lath, for buildings being built or repaired. Our goods and our advertising make this a demand for the "Galt Kind." Get ready to supply it by asking us at once for catalog, prices and particulars of our proposition.

A TRIP THROUGH CALORIC-VILLE

A few years back you felt rather doubtful about the selling ability of a Canadian Made Steel Range. Now things are changed, and because of that fact we want to take you with us on a trip through that foundry of ours from whence comes "Caloric," the gas range that pushed itself to the front.

We are going to be frank and tell you everything in connection with this range—the material, the making, the chances for selling.

You know as well as we do that the gas stove business is here to stay, that in certain territories it is the "only" line, and that no dealer can afford to miss a single sale. You know also that there is more money and less work for you in selling a Canadian-made article than a foreign article, and we believe when this trip is over that you will agree with us that "Caloric" is the Canadian Gas Range to put your money on.

You may ask "Why didn't you talk gas ranges strong other years?" Answer—"When we have our goods as near perfect as they can be, then, and only then, do we proclaim their virtues."

We worked for years on our coal and wood stoves before we told the story of their perfection to the public. You know how the public responded. You can see the answer as soon as you arrive in London.

And by the way we could name you a dealer not one hundred miles from London, who, up to last year, would not look at a "Caloric." He sold the Yankee article. Last year he took a look, then a sprint, and presto! more gas stove sales than any previous year in his history.

"Caloric" is a good gas range. You bet we are going to push it along.

"SAFE LOCK" SHINGLES

with less argument and more profit, than any other metal shingles.

SAFE LOCK Shingles are this year being made of superior material, and with greatly improved appearance and construction.

There is no longer any notch in the bottom lock, and all the locks are now absolutely uniform, so that they fit together instantly. The impression on the shingles has been deepened and emboldened, resulting in a very handsome finish.

SAFE LOCK Shingles are made altogether by machinery. That insures all locks being perfectly true, and makes them the easiest of all to lay. Our dealers will make more money out of SAFE LOCK Shingles than they ever have before. Are you one of our dealers? If not, why not?

Retail Hardware Association News

Official News and Correspondence on Association Matters Should Be Sent to the Secretary of the Ontario Retail Hardware Association, 10 Front Street East, Toronto, and Matter for Publication in This Department Addressed to the Editor of Hardware and Metal, Toronto.

ONTARIO CONVENTION PROGRAM.

Tuesday, Feb. 9.

10.30 a.m.—Executive Committee meeting.

2.30 p.m.—Convention (business session).

8.00 p.m.—Convention addresses by R. R. Williams, hardware editor Iron Age, New York, and Robert Munro, Montreal, followed by "Question Box" discussion.

Wednesday, Feb. 10.

9.00 a.m.—Visit Greening Wire and Canada Screw factories.

1.30 p.m.—Convention (business session.)

8.00 p.m.—Complimentary banquet tendered by hardware jobbers and hardware manufacturers of Hamilton.

Thursday, Feb. 11.

9.00 a.m.—Visit Canadian Shovel, Canada Steel Goods and Canadian Drawn Steel factories.

1.30 p.m.—Convention (open to travelers, etc.) Short addresses by C. C. Ballantyne, Montreal; A. A. Briggs, London, and others, followed by "Question Box" discussion.

8.00 p.m.—Complimentary theatre party, tendered by hardware jobbers and manufacturers of Hamilton.

Friday, Feb. 12.

Hamilton manufacturers invite visiting retailers to visit the blast furnace and other hardware and kindred industries.

Special Railway Rates..

Those attending the convention should ask their railway agent for a one-way ticket to Hamilton and a "standard certificate." This certificate will be signed by the Secretary at Hamilton and a reduced fare allowed for the return trip. Tickets will be good going Feb. 5 to 10, returning up to Feb. 15.

Convention Headquarters.

Waldorf Hotel, Hamilton.

BIG CROWD COMING.

"We will have a number of new men from the north," writes President Hambly, Barrie, when sending in a fee for a new member at Aurora.

"There will be a more representative gathering of Eastern Ontario hardwaremen at the convention than ever before," writes R. C. Chown, of Belleville. "I am trying to get some of my friends to attend as I know if they go once the pointers they receive will more than pay them for the time and money they spend."

Carter Brothers, Picton, are one of several firms who want to know the remedy the "Ontario Hardware Dealer" spoke of in his letter on the roofing question in last week's Hardware and Metal. The remedy will be explained at the Hamilton convention.

"I am very much interested in the Hamilton convention, and will try to spend all three days," writes W. S. James, Niagara-on-the-Lake, a new member. Other new ones coming include L. I. Hunt, Thorold; W. T. Walker, Cobalt; J. W. Husband, Wallaceburg; D. Sinclair, Paris; Frank E. Coy, St. Catharines; F. McPherson, Blyth; W. A. May, Creemore, and Stanley Mills, Hamilton.

"You can count on me being at Hamilton, even if it's a case of walking there, as I am sure after the profitable and successful convention last year no one who was there will miss the coming one," writes F. A. Hoar, Barrie.

"Make out badges for my brother and myself. I enclose 50 cents for the extra badge," writes C. R. Bailes, Oshawa.

"We have been members since May, 1906, and consider we have been many times repaid. We cannot place a value on the benefits received at the convention. Can I bring our head clerk to the convention with me?" writes Adolph Henry, Orono. Of course he can.

"I have been looking forward to the Hamilton meeting as my annual outing, and I expect to enjoy myself in every way—physically, socially and financially," writes S. B. McClung, Trenton.

But space is limited and this must end.

There'll be a crowd at Hamilton, all right.

THE QUESTION BOX.

Fred. C. Lariviere, Montreal, one of the best informed and most progressive hardwaremen in America, has accepted an invitation to attend the Hamilton convention on Feb. 9, 10 and 11, and take charge of the "Question Box" discussion.

It is now up to the retailers who attend to supply Mr. Lariviere with a goodly number of "live" questions dealing with problems affecting the retail hardware trade. And as the discussion will be reported in these columns questions might even be sent in by men in the trade who find it impossible to attend.

"WILD CAT" TRADE.

Editor Hardware and Metal:

My attention has been drawn to "Hardware Dealer's" letter in the last issue of your paper. He seems to be on the right track of those people who go about the country peddling to farmers, threshers, mill men, elevators, and they themselves only know who not.

Now the firm named are not the only ones who do that sort of thing, and if this thing goes on it will ruin trade very quickly. In my town almost any little tinker can quote wholesale prices, showing at once that the travelers have been either selling them or trying to do so. I have been injured very much by this sort of thing, and am not going to join the hardware association till a strenuous effort is put forth to stop this "wild cat" trade.

No house sell to anyone who has not a certain area of shelving, say 200 feet, fair measure, filled with goods and some one always on hand to serve the public. This would shut out small retailers who do not propose to run any business, but just to spite some good, large house who has to keep a large stock to accommodate the public.

I believe the Hardware Association could do very much to remedy this evil. I am sure all retailers should attend the coming Association convention in the City of Hamilton, and protest against this sort of thing, and I know if they do, much good will be done. I hope Hardware and Metal will use its columns to this end.

ANOTHER DEALER.

Note.—The writer of the above is not a member of the Ontario Association, and he says he doesn't intend to join. He registers a kick, but he wants some other retailers to bear the brunt of the work, and then when everything is lovely he will climb into the bandwagon, stick out his chest and point to the great things "we" have done.

There are many of his way of thinking. They say the Association is a good thing, but ask them to join and they are great side-steppers.

If "Another Dealer" thinks it good policy to stay on the outside and be a whole football team in himself he can elect to do so. But he ought to be told that there are towns in Ontario where "selling to consumers" is not as prevalent as it is in his town. And if he attends the Hamilton Convention (as he thinks others ought to do) he can bring his grievances before his fellow-retailers and unite with them in building up an Association strong enough to remedy the evils complained of. W. W.

Prize-Winning Christmas Windows

Result of the Contest for the Best Holiday Displays in Large Cities and Small Towns—Prize Also Awarded for Best Christmas Advertisement.

This year's Christmas window dressing contest eclipsed any yet held by Hardware and Metal, both in the number and quality of the displays made, and it is safe to say that nowhere in the world are there any better hardware windows shown than right here in Canada. And that the contests held under the auspices of this paper are fruitful in results is shown in many ways.

In the first place, it is evident that a friendly but keen rivalry exists between the hardware clerks and merchants in a number of Canadian cities as to which firm will be able to show the most attractive and best selling window.

Then again, Hardware and Metal is helping bright clerks to advance themselves into higher positions in life. For instance, Albert Karges, a Woodstock, Ont., clerk, has become the manager of

Awarded 1st Prize—Dressed by Walter S. Bate, with Johnson & Co., Brandon, Man. A Neat Window Not Overdone and Calculated to Encourage the Buying of High-Class Goods.

a large Winnipeg business largely as a result of the publicity he gained through the publication of his window displays in this paper. Then S. S. Wetmore, Halifax, one of our last year prize-winners, is winning a continental reputation. And this year the clerk dressed the prize Vancouver window was last year the dresser of a prize-winning window at Almonte, Ont. Evidently his reputation helped to carry him west to Canada's metropolis on the Pacific Coast, and that the advice given by Hardware and Metal is being taken is evident by the fact that practically every window entered in the competition made a feature of using price-tickets on the articles displayed.

A general criticism of the photos sent in this year is that the majority of the wiudows shown are overcrowded, some otherwise good displays having to be over-ridden in awarding the prizes on this account.

In making the awards consideration was given both to the attractiveness and the selling qualities of the display made. In fact, a window calculated to draw a crowd to the store was considered to be worth about one-third more than one

Awarded 2nd Prize—Dressed by Roy C. Gilmour, with J. A. Flett, Vancouver. Well Arranged but Slightly Over-crowded with Not Enough to Relieve the Eye and Encourage Study.

which merely showed a fine line of goods without any special feature to attract attention. Some stores follow the plan of making two displays, one to draw the crowd, the other to sell the goods, and this is undoubtedly a good idea. Where this is done, however, in a contest, photos of both windows should be sent us.

The Prize-Winners.

In cities over 10,000 population the first prize was given to Walter S. Bate, with Johnson & Co., Brandon, Man., who was the winner of a first prize for the same window last year. At that time the dividing line was placed at 25,000.

Second prize was awarded to Roy Gilmour, with J. A. Flett, Vancouver, who a year ago ran second to Mr. Bate with a window dressed for Torrance & Koffman, Almonte, Ont. This year, however, the contest was more close.

Third prize went to A. A. Letellier and H. J. Hanwell, with the Kingan Hardware Company, Peterboro, their window differing from the others in being one calculated to draw a crowd. Had it been accompanied by a good companion "selling" window it is probable first prize would have been given. The window shows a fair line of gilt hardware but its merit is in its ability to attract big and little children and bring them to the store.

A special fourth prize was awarded to W. B. Christopher, with Fox's cutlery store, Victoria, for his excellent cutlery display.

These four windows are illustrated this week and the prizes will be forwarded in due course.

In the Smaller Towns.

In the contest confined to towns under 10,000 some fine photos were also submitted. These, however, will have to be held for publication in a future issue. The same prizes, $5 for first and a copy of "Hardware Window Dressing" (MacLean Pub. Co., Toronto, $2.50) for the others, are given in both contests.

The first prize went to H. Flowers, with Peart Bros., Regina, his window being a mechanical ferris wheel arrangement with high merit both for its attractiveness and selling qualities. In fact, this window was considered the best submitted in both contests.

Second prize was taken by Peter McNaughton, with J. L. Fenn & Sons, Bracebridge, Ont., his window being a strong "selling" display arranged very artistically and not overloaded with goods.

Third place was claimed by R. F. Johnstone, hardware merchant, Acton, he sending two photos, one being the prize-winner, showing Santa Claus before a fire place, together with a neat arrangement of holiday goods, and a second showing holiday goods exclusively.

The Best Advertisement.

The Maritime Provinces, which was represented by only a couple of entries in the window contests, led the van in the advertising section of the competition, first prize being again won by Emerson & Fisher, St. John, last year's victors. Their ad., along with several others, will be published shortly in Hardware and Metal.

Commendable advertisements which will also be republished, were also sent in by R. F. Johnstone, Acton; Williams Bros., Gladstone, Man.; C. C. Falconer & Co., Winnipeg; J. L. Fenn & Sons, Bracebridge; A. W. Humphries & Son, Parkhill, and many others.

In the window-dressing contests, too, several of those which failed to win prizes are worthy of being engraved and during the year many of these will be shown on these pages. Included in these are those of A. H. Hatch, Vancouver; Peter Hymmen & Co., Berlin; Geo. W. Ecclestone, Bracebridge; Orillia Hardware Company, Orillia; Williams Bros., Gladstone, Man.; Dakin Bros., Digby, N.S.; Adamson & Sproule, Orangeville; R. Chestnut & Sons, Fredericton, N.B.; Taylor Bros., Carleton Place, and the Vokes Hardware Co., Toronto.

SELLING LESS THAN COST.

Low prices should not be the only point considered by dealers when placing orders for goods. Very often the manufacturer selling goods for less than the cost of production finds himself unable, and not infrequently unwilling, to fill such orders, and in consequence the retailer is hampered, annoyed and subjected to loss Dealers who are willing to concede to manufacturers a fair profit on goods purchased never have cause to complain of unfair treatment. If the manufacturer would benefit themselves and their customers, they should stop the cutting of prices immediately. Goods should be marketed for a fair margin of profit, based upon style and quality.

Awarded 3rd Prize—Dressed by A. A. Letellier and H. J. Hanwell, with Kingan Hardware Company, Peterboro. A Strong Selling Window Likely to Attract the Attention of Children. Should be Accompanied by a Window Showing a Display of Holiday Goods.

THE METAL SITUATION.

Although the consumption of metal in Canada cannot be considered so good as it might be, yet we seem to be in a much better position relatively than our neighbors across the border. In New York we hear of stagnant markets, of jobbing orders conspicuous by their absence, and of a shaken confidence that is perhaps only natural in the circumstances. Nothing creates depression more than unrealized anticipations, and New York certainly banked high upon a strong consuming demand setting in long before this.

Here in Canada we have not been so confident as to the certainty of a strong revival in trade, and therefore we have not laid ourselves open to disappointment, and furthermore we are heartened by the fact that, although buying may not be heavy it is steadily improving. More metal is going into consumption every week, and among the trade generally there is a feeling of quiet confidence that speaks well for the future. The railroads are ordering well and progressively. Last week we announced the placing of large orders for locomotives, and now it is reported that the Canadian Pacific Railway intend to spend $6,000,000 in construction work in the west. The plans include some 300 miles of additional line. Good business for the Canadian rail mills, seems thus assured. As we pointed out last week this buying encourages other industrial activity, and stimulates the whole metal industry.

There is no doubt that if the primary markets would commence to show steady strength that buying ahead would improve here. The greater part of the purchasing is for immediate use, but if consumers were to see a growing stability in the metal situation they would lose no time in covering themselves. But so long as the markets are weak so long will they hold off in the hopes of coming in at the lowest figure. Not only for the sake of the metal market here, but for the sake of the situation in New York, it is to be hoped that the apathy of the consumers will disappear, and that steady buying will put the metals industry on a stronger footing.

A company is seeking authority to construct a line in British Columbia from Lena Island along the valley of the Honna River to Camp Robertson and Camp Wilson, and from thence to a point on Shields' Island, Rennell Sound, etc., with power to construct branch lines not to exceed twelve miles in length.

Hardwaremen Bigger Than Their Business

Story of How a Guelph Hardwareman Has Developed a Big Farm Implement Business—Also Finds Time to Take an Active Interest in Municipal Politics.

"Yes, we can equip a farmer with practically everything he needs except food and clothing," remarked George Penfold, of the firm of S. and G. Penfold, hardware merchants, Guelph, to a representative of Hardware and Metal.

"What lines of goods do you handle?" was asked.

"You might better inquire what lines we do not handle," was the good-natured rejoinder.

"Do you find any difficulty in attending to so many?"

"Not a bit. They all work well together and bring trade to the store."

"What about your agricultural implement department? How do you look after that?"

"Well! it is this way," continued Mr. Penfold, "twenty-eight years ago this coming April my brother Sam and I went into carriage making. We did a big business and do so yet. The agricultural implement men later started selling buggies and cutters on consignment and cutting into our trade. We put our heads together and came to the conclusion that being the case, there was no good reason why we should not meet their competition by going into their line, and so fifteen years ago we branched into agricultural implements, and we are at it still as you can plainly see by looking through our extensive warerooms."

"When did you add hardware?"

"Well, as we had to keep certain repairs for our customers, we concluded that it was but one step further to put in an up-to-date hardware stock and this we carried out three years later or about twelve years ago. We have since then added stoves, heavy and light harness, gasolene engines, manure spreaders, windmills, tinsmithing, cream separators, and other lines.

The range of implements that the firm of S. and G. Penfold handle embraces binders, mowers rakes, seed drills, cultivators, plows, disc harrows, scufflers, land rollers, hay loaders, hay tedders, manure spreaders, gasolene engines, and other utensils, such as wind mills, cream separators, as well as manufacturing buggies, wagons, cutters and sleighs, and a complete stock of hardware, stoves, etc. Each department is separate in itself but all connected by sliding doors in the spacious premises occupied by the enterprising firm.

"Do you consider that a hardware dealer can handle implements to good advantage?" was the next query fired at Mr. Penfold.

"Certainly I do, if he has the room. Why, the implement trade brings lots of business to our hardware store and the hardware department results in us selling many implements which we would otherwise not do if we dealt in them alone. We keep a man on the road all the time looking up prospects and interviewing the farmers. When a customer comes into the hardware store for a chat we naturally inquire from him what he will be needing in the line of implements next year. We do this in an off-hand manner and early in the year. He will perhaps reply that his mower is about worn out and will not do him another season or that his drill or cultivator is giving him poor satisfaction. He may also express a wish for a new plow or a harrow. We do not bother him then and there, but, when he has gone, his name is jotted down in our book as a prospect for such and such an implement and our

EX-ALD. GEO. PENFOLD, GUELPH.

salesman on the road calls on him in the course of a few days or weeks and very often secures his order. Now, where the hardwareman in selling implements has an advantage over the ordinary implement agent is this. The implement agent must have warerooms and must keep them open all the time, so that the farmers can secure repairs. He cannot do both things—attend to the warerooms and be on the road at the same time selling and setting up machines. The result is that one man has to be at the showrooms and his time is not much taken up at certain seasons of the year except the matter of replacing broken parts. The implement agent has, therefore, to attend to the shop himself and have a man on the road or to reverse this, go out himself and hire a man to look after the warehouse, and there is rarely work enough for two. With us it is different. Our clerks in the hardware store look after the implement business and repairs as well. When they are not busy with machines they are putting in their time at the shop to good advantage waiting on hardware customers. You know that the busy season for selling certain lines of agricultural machines is short. Our men lose no time and we have the expense of only one man—the traveling representative—whereas the implement man has two—the one on the road and the one in the shop. When I say that a hardwareman can handle both lines advantageously and profitably I mean, of course, if he has sufficient space adjoining or in his premises for implement display purposes."

Mr. Penfold explained that all manufacturers of farm machinery have a selling plan where implements are handled on consignment. At present they are not sold in any other way. All machines are guaranteed by the makers for one year and any parts are replaced free of charge if broken within that time. Machines are sold on one, two or three-year payments. After a purchaser has placed an order for a machine his financial standing is carefully inquired into before delivery. If the sale turns out to be a bad one and the paper is not met, the manufacturer loses the cost of the machine and the seller his commission, but very few transactions result disastrously. It is not an uncommon occurrence for a farmer to hand over all the amount due on an implement at the date of his first payment and he is allowed a liberal discount for so doing. Or, he may come in a month after the machine is set up and working and, being thoroughly satisfied with it, settle for the purchase, in which event he is given a discount covering the full terms of payment. The discount runs about six and eight per cent. or otherwise what the manufacturer would have to pay the bank to carry the amount.

"Why could not a hardware dealer of sufficient capital buy implements outright for cash, sell to the farmer for cash or short term lien note, make a good profit for himself and at the same time dispose of a machine much cheaper than the commission merchant does?" was asked.

"Well, that would be a good plan but at present is unworkable," replied Mr. Penfold. "It would result in the manufacturers having to organize a new selling plan. They all adopt the same methods of disposing of their goods now and that is on the commission basis. There is a certain fixed price on each implement and below that no one is allowed to go. Supposing you represented a firm in one district and paid cash for your machines, you would not be permitted to sell one whit cheaper than the agent for the same firm in the next county, or, in other words, your cash purchases would not enable you to

cut the price. It would be unfair, as if one agent for the manufacturers slashed the price in his district, he would be taking sales away from the representative in the next district, and two agents in localities not too large, will sell more machines than one agent covering an immense territory. We find the commission basis satisfactory. We are not loaded up with a lot of machines as we might be, if we paid cash and there came a poor season or two. Farmers, generally speaking, meet their notes fairly well, and a number take advantage of the cash discount, especially if it has been a year of heavy harvest, and they receive a good price for the products of their land."

"Why should not all implements be sold direct to the farmer for cash?" was asked.

"In the spring or early summer when the farmer generally buys what machines he requires he has, except in the case of a few wealthy tillers of the soil, not sufficient money," continued the speaker. "There are very few farmers forehanded enough to pay spot cash, but give them a little time and they will purchase where they otherwise would not. It is in the fall and winter, when they draw the money from the cheese factories and sell their grain and fatted stock, that they have the coin to settle up and that is not the time they want agricultural implements. In other words, when the farmer requires a new machine he has not the ready money and, when he has the necessary cash, that is not the time he needs the machine, or, at least, has a pressing want for it. It works on the principle that you do not buy a fur overcoat in the summer time. You generally wait to see what the weather will be like before investing in one, and farm implements are seasonable goods the same as anything else."

Mr. Penfold told of how custom was changing and farmers were starting to buy gasolene engines for power. The old horse-power operated by horses had given way with the march of progress to windmills and steam engines. But the farmer was discovering that with a windmill, when he wanted power there was perhaps no wind, or that something has gone wrong with the mill and was gradually coming to the conclusion that gasolene was the safest and cheapest for all motive purposes."

The experience of the Penfold firm in selling agricultural implements has been entirely satisfactory for the reasons pointed out, and it would seem any hardware dealer in a good farming community, providing his town is a progressive one, and he has the necessary room or space for displaying machines, can handle them profitably, with beneficial results and mutual advantage to himself, the farmer and the manufacturer.

"You would be surprised how much business it brings to our hardware store," Mr. Penfold concluded. A man steps in here from the implement wareroom and often finds he wants many things in hardware and the implement line possesses a strong attraction for the average farmer. The selling of machines works the other way also. When a farmer is in here purchasing a rake, hammer, fork, nails, or shovel, he gets talking on things in general and we learn his needs in the implement line, carefully note them, and, with our follow-up system and by having a man on the road, we are enabled to close many sales with the pointers received here. You see that we are a sort of departmental store to the farmer with our various lines and can meet his requirements on all sides, while our place has grown to be a kind of headquarters for him when he comes to town. By our agricultural implement and repair department, along with our harness, stoves, carriage, hardware, etc., we get pretty closely in touch with the tiller of the soil, and have a strong hold upon him."

The Penfold brothers are native born, residents of Guelph. They are modest, quiet, strictly honest and thorough going business men. By their industry and foresight they have built up a big business and wide connection in all lines and know every farmer personally for miles around.

George Penfold first entered municipal life fifteen years ago and he has served about ten years as an alderman, during which time he has held the chairmanships of most of the important committees and occupied seats on the Guelph Junction, Radial Railway and other civic boards of this city of municipal ownership. In recent elections he was an unsuccessful candidate for the mayoralty. Guelph now enjoys the benefits of a municipal owned gas and electric light plant. When it was taken over by the city four years ago Ald. Penfold was one of the hardest fighters in favor of the municipal ownership of the gas plant and it was largely owing to his efforts that the point, fortunately for the city, was carried in the face of a strong opposition.

With characteristic unselfishness, Mr. Penfold, though not a member of the Socialist party, has been one of the best friends to the movement here. It has not always been to his advantage to help the Socialists, but Mr. Penfold has always done what he could for them. "The boys are fighting a hard fight. They need some one to help them out," he explained to your correspondent.

Penfold's Hardware Store and Implement Agency, Guelph.

LETTER BOX.

Belt Hooks—Pow & Wilcox, Tillsonburg, ask where they can secure brass split belt hooks, looking like a split rivet with a large oval head.

Rice Lewis & Son, Toronto, have a steel coppered rivet answering this description.—Editor.

ABOUT BROOM PRICES.

The price of broom corn, like every other product of the farmer, depends largely on crop conditions and consequently when a shortage exists, higher prices prevail and this naturally means higher priced brooms. Those who are familiar with the conditions applying to butter, eggs, etc., should not wonder at the complete disappearance of the 25c broom, if they will bear in mind the exceptionally short crop of broom corn last season, which caused the price to advance. 20c butter and eggs are out of the question under present conditions and so seem to be 25c brooms.

Intelligent buying, good store arrangement and effective advertising are three most necessary adjuncts to a successful hardware business.

HAMILTON CONVENTION NUMBER.

Next week's issue of Hardware and Metal will be a special Hamilton convention number, containing a history of the Ontario Retail Hardware Association, some interesting articles regarding Hamilton's hardware industries and a lot of last minute information about the convention on Feb. 9, 10 and 11.

The paper will be mailed on Friday night to reach every hardware dealer in Ontario by Monday, and retailers attending the convention are urged to read the issue before leaving home, or, better still, put it in their pockets to read on the train, so that the articles referred to and the special announcements of Hamilton manufacturers and exhibitors will be fresh on their mind when they arrive at Hamilton, the hub of the hardware trade in Canada.

WITHDRAWS FROM WHOLESALE ASSOCIATION.

Differences existing between Lewis Brothers, Limited, Montreal, and the other members of the Canadian Wholesale Hardware Association, came to a head during the past week, when the firm tendered their resignation from membership.

When asked for verification an officer of the Association stated that an end had to come to every disagreement and the natural thing had happened, the resignation had been tendered and the members had promptly consented to the withdrawal.

WORTH CONSIDERATION.

The attention of the Dominion Government should be forcibly called to the law existing in British Columbia which restricts manufacturers outside of that province from doing business within its borders without first registering there. It seems that even those who have been granted charters by the Federal Government and thereby given permission to do business in any part of the Dominion are not allowed the full privileges one would think they should possess when it comes to British Columbia. On the face of it this condition of affairs does not appear to be just but it does appear to be contrary to the principles of Confederation.

For a provincial government to claim that its laws and regulations are not to be ruled by those of the federal government certainly does not seem to be one of the fundamental principles of the unity of the provinces.

The entire nature of the law in British Columbia governing this question with some of its results is given in another column of this issue.

SECURING ROOFING BUSINESS.

An excellent system for making sales of metal roofing, etc., used by an Eastern Ontario retailer is worth consideration by other hardware men who want to see the trade in this line kept in the hands of hardware men.

The hardware merchant in question has adopted the plan of getting in close touch with carpenters and barn framers in his vicinity, and is obtaining from them the names of intending barn builders. He then passes these names on to the manufacturers, who write them, sending them copies of their catalogues.

Another scheme which is sometimes adopted is to have sub-agents every three or four miles in a locality, who keep the dealers informed as to the buildings which are proposed in their own neighborhood. They are generally paid a small commission on sales which they help to effect. This plan can easily be worked out even by a hardware man who is too busy to get out after the business himself, and yet who cannot afford to keep a man on the road canvassing. This plan, to a great extent, does away with the objections there have hitherto been to working through the trade; that is, the apathy of the dealers, or their actual inability to spare the time necessary in working up a business among the farmers.

An example of this is the case of a Northern Ontario retailer who had the agency for a line of roofing but felt he was too busy to go out after the trade. The roofing manufacturers urged him in vain until they suggested the sub-agent plan. The merchant took to this at once and selected a friend who did business as an implement agent. The hardware man carries a stock and pays a small commission on the sales resulting from the information supplied by the sub-agent.

There are many ways of getting roofing business, and some other plans will be outlined in future articles. One thing must be accepted, however, the business must be gone after, and if the hardware merchant don't do this, others will.

POOR QUALIFICATIONS.

Information secured regarding the qualifications of W. K. Snider to suitably fill the position of special hotel commissioner does not impress one with the idea that he is the man for the position. He has been called upon by the Government of Ontario to look after the interests of the commercial travelers by ordering improvements in hotels and giving advice to hotel proprietors. The Government has done the proper thing in providing a special commissioner, but has it secured a man whose experience will teach him what is best to do?

For three years Mr. Snider was Conservative organizer. Prior to that he was interested in farming and lumbering, and also has organized companies, having been connected with the organization of the Wallaceburg Beet Sugar Company and others.

None of these would appear to give to any man qualifications that would make him a successful critic of what was lacking in a hotel, It is not probable that he has traveled extensively in the villages and smaller towns where proper hotel equipment is seldom met with, and, therefore, it seems quite improbable that he would be acquainted with the details that go to make a safe, sanitary and well-equipped public house.

A commercial traveler is the man who should have been appointed to take care of the safety and interests of the commercial travelers, and not a man who has had nothing heretofore to do with the knights of the grip and who naturally would not be much interested in their welfare.

WORK FOR UNEMPLOYED.

Hardware merchants have a chance at present to perform a service to the public by urging the erection of public lavatories in every city in Canada to help provide relief work for the large numbers of men, willing but unable to find work. The work of making excavations, etc., would take care of many unskilled workers, while the skilled tradesmen would also secure their share. And besides this the manufac-

turers, supply men and master plumbers would also benefit.

No city in Canada is in keeping with modern progress so far as public comfort stations are concerned. Toronto has done more than any other city, with its three public lavatories for men and its nearly completed public laundry and bath house. Montreal is away behind the times for a city claiming to be a metropolis, although its public squares offer innumerable opportunities for locating public conveniences. Ottawa has no public lavatory and Quebec and Halifax are, we understand, in the same class. Hamilton has one fairly good station on the public market and St. John has another small, but modern, market lavatory. London's market lavatory is unwholesome and behind the times, while Winnipeg's public lavatory on its city hall square is a disgrace to the city. Regina, Calgary and Edmonton are reaching the stage when they must supply the public needs in this respect. Vancouver has had several small corrugated iron enclosures and is replacing these with larger metal structures fitted with closets and urinals. And Victoria, though visited by thousands of tourists annually, has nothing of the nature of a public lavatory.

Even Toronto, admittedly the best supplied of any Canadian city, is far behind the needs of a growing twentieth century city and the suggestion made by the leaders of the unemployed workers of Toronto that more public lavatories be erected is a practical proposal worthy of immediate adoption. A dozen favorable locations for public comfort stations could easily be selected but the chief need is for a thoroughly modern station on the city hall square, where it would be convenient to the down town shopping district. At present the saloons cater to the men and the departmental stores supply limited conveniences for women, but neither of these are sufficient and the city should provide conveniences to its citizens without making the individuals obligate themselves to saloon keepers or department store merchants in order to answer the calls of nature. And what is said of Toronto is equally true of every city in Canada.

If property owners in cities have rights they also have responsibilities and regardless of the claim that a city has no moral right to provide work for men who are not permanent citizens, every Canadian city has need for more modern public conveniences and the councils elected for 1909 should at once take steps to provide needed conveniences for their citizens and by so doing help to relieve the distress caused by the lack of employment forcing citizens and non citizens alike to ask for aid.

What To Do Next Month

It is well for the hardwareman to remember that an early spring trade is generally expected. Jobbers are in many cases hurrying forward the despatch of goods from the manufacturers, and getting their stock in the best possible shape for the coming spurt in business. Too much depends upon the spring consuming demand to allow of any check to its free movement. The economizing damper of the country is expected to be lifted in no half-hearted manner, and jobbers and manufacturers do not intend that it should lose any of its effectiveness through want of preparation on their part.

Retail merchants should take a hint from this, and be equally forward with their arrangements. Stock-taking should be through by now. January is the ideal month for this necessary work. The mid-winter dullness of trade at this time allows the merchant to go through the tiresome checking at the utmost speed. But a good many men, although they know that January is the best month for the inventory, always fail to seize the occasion. They put off the work until the last minute, with the result that February is upon them before they have started turning out the shelves. Those who have delayed should lose no time now. Travelers will be calling upon them in rapid succession, and in view of the general opinion as to early spring trade it would be a wise precaution not only to order when the representatives are there, but to cover probable requirements thoroughly. To do this in a satisfactory way the merchant must not only be clear of his stock-taking, but have had time to digest clearly the information given by this inventory, and to take into consideration the peculiar conditions attending the coming spring trade, and the best means to cover it. The stock-taking shows the lines, which by their success last year, should be extended, while the merchant's knowledge of the growth of the district, and of the peculiar characteristics of its demand—for the trade of every district has certain peculiarities of its own—helps to the mapping out of a clear course. And over and above all the economy practised last year by consumers, and the natural reaction, must be taken into account and provided for.

Should Order Early.

The belated dealer, then, should lose no time in getting his stock-taking over for if he is not ready for the traveler he may be further encouraged in his procrastination until in the end he may be so late in placing his orders with the jobbers that his shipments may be held up by congestion of shipping and other delays of a busy season. The merchant who gets his orders on the jobbers' books early is in easy street. He knows that he stands the best chance of getting shipment, and of making any shortage in his stock a remote possibility.

Order early and order comprehensively should be the motto of the retail merchant this month. Special pains should be taken that not a sale is lost by being without the goods. One customer disappointed at the commencement of the spring demand may mean the loss of many sales later on. Complaints soon fly round, and the man who wants to be the first to put a new coat of paint upon his house or barn, and is unable to get the color wanted because the goods have not been ordered, or are late in coming through the dealer's procrastination, may be the means of setting forth a condemnation of the store that cannot fail to hurt the merchant.

Again, the merchant may have decided to effect some much needed improvement in his store. A new window may be needed to lighten a dark corner, while the general arrangements of the counters and shelves may demand alteration. He may have decided to build an annex to cope with extending trade, or to modernize the outside appearance of the store by larger windows or by changing the entrance. Such improvements cannot be effected in a day or probably a week. It would be folly, therefore, with the probability of an early spring demand to delay these improvements. He must get the carpenters to work as soon as possible. for they must not be in possession of the store when the country awakens from its winter quietness, and the wheels of trade are revolving more rapidly.

Plan a Selling Campaign.

To the merchant who is well ahead of the times the course is clear. He has ordered, or is ready to order, his goods. He has decided upon the number of lawn mowers wanted for the first order, the amount of garden hose, the lines of gardeners' tools, the builders' hardware, the carpenters' tools, the refrigerators, the ice cream freezers, the poultry netting, the green wire cloth, the screen doors, the stepladders, the wheel barrows, the enamelware and the general household goods, and last but not least, the paints, enamels and stains. He can, therefore, set out to plan his selling campaign, to consider the best advertising methods, and to galvanize his whole business system into greater activity than before. He is free to take that department of his business which did not show the results that it should have last year, and to work out ways and means whereby it can be improved. He can evolve a systematical method of window display so that each season of the year can be anticipated at the right time, and by the best design. This is a very important point. There is no method of advertising more effective than good window displays, and the merchant who anticipates his season judiciously and creates an appetite on the part of the consumer at the right time, has a selling force working for him that cannot be over-valued. To the progressive man there are hundreds of things which can be done between the finish of the stock-taking and the opening of the spring demand.

Hardware and Metal Markets

(For detailed prices see Current Market Quotations, page 74.)

MARKETS IN BRIEF.

Montreal.

Tin—Weaker.
Copper—Weaker.
Spelter—Unchanged.

Toronto.

Pine Tar—60 cents doz.
Paint Materials—Several changes.
Brass Goods—Less discount off list.
Oakum—Decline in bale lots.
Solder—½c lower.

MONTREAL HARDWARE MARKETS

Montreal, Jan. 29.—Although trace has not developed the strength that it should have at this time of the year, an improving tendency is noted day by day. Spring booking is getting more comprehensive in character, but the orders are still on the light side. A strong stilmulation is expected in the next week or so, when the retail trade generall will probably be clear of stock-taking. Travellers seem more than ever confident of a strong spring trade developing. No sensational boom is looked for, but a steady improvement bringing with it stability, and a general feeling of assurance as to a good year's trading.

Harvest tools are now commencing to show strength for future delivery, while lawn mowers, hose, hose nozzles, lawn sprinklers, refrigerators and ice cream freezers are in better demand. Sorting up orders for immediate delivery in general shelf goods, including builders' hardware and carpenters' tools are decidedly better. Prices generally are unchanged, but the tendency is towards gradual advancement during the year. Dealers, therefore, should cover themselves well before the full demand breaks in.

BUILDERS' HARDWARE—There has been an improvement in builders' hardware, stronger sorting up orders having been received. Lock sets, butts and bolts appear to be in most prominent demand. We continue to quote: Discounts on door sets, 50 and 10; escutcheons, 50 and 10; escutcheon pins, steel 50, brass 55. Spring hinges per gross, No. 5, $17.50; building paper, O.K. No. 1 per roll, 75; No. 2, 70.

SPRING LINES—To the lines that have already shown movement for spring delivery must now be added harvest tools, some fair orders having been received for forks, hoes and rakes. Lawn mowers, hose, hose nozzles, lawn sprinklers, gardener's tools, ice cream freezers, refrigerators, green wire cloth, poultry netting and screen doors and hinges are moving steadily if in no great bulk. We quote: Screen doors, stained, $7.80; grained, $8.10; poultry netting, 60 and 2½; green wire cloth, $1.70 in 100 ft. rolls.

SPORTING GOODS—There is still a movement in skates, snow shoes, and toboggans, but the season in these lines is practically finished. Fishing tackle is about the only sorting line to show any strength as yet. We continue to quote: Dominion rim cartridges and C.B. caps, 50 and 2½ per cent.; B. B. caps, 50, 10, 2½ per cent; Crown black powder, 20 per cent.

BOLTS AND NUTS—The demand keeps at fair strength. A stimulation is expected in a week or so. We continue to quote: Discounts on carriage bolts, ⅝ and smaller, 70; machine bolts, ⅝ and less, 60, 10 and 10; coach screws, 75; stove bolts, 80 and 7½. Wire nails are still quoted at $2.30.

SCREWS—Some good sorting up orders have been received. The market is unchanged with supplied in good shape. We continue to quote: Discounts are at 85 and 10 off for flat head bright; 80 and 10 off for round head bright; 75 and 10 for flat head brass, and 70 and 10 for round head brass.

HOUSEHOLD UTENSILS—A decided improvement has taken place in household utensils, good sorting up orders being received during the week. Graniteware, and tinware are in better demand, and there is a good movement in wash tubs, wash boards, wringers, washing machines, brooms, pails, and carpet sweepers. We continue to quote: Sad irons, Mrs. Potts', No. 55, 75c; No. 50, 80c per set; asbestos, $1.50; cake makers, $17.25 per dozen; bread makers, $18 per dozen and upwards.

LUMBERMEN'S SUPPLIES — Sorting up orders have improved, and a good movement has taken place during the week in boot calks, cant hooks, and cross cut saws. The market is firm, and unchanged. We quote: Boot calks, $4 to $4.25 per 1,000; wing calks, $6.-50; canthooks, $12 to $16 per dozen; axe handles, $1 upwards; axes $6 upwards.

WIRE—Bookings for early spring shipment are fairly heavy, and jobbers anticipate a big improvement over last year. We quote: Plain wire, $2.30 base; Barb wire, $2.65 in straight and mixed car lots, and $2.70 in small lots. Galvanized wire No. 9 $2.35 in straight and mixed car lots, and $2.40 small lots F.O.B. Montreal. Coiled spring fencing $2.65 straight, and mixed car lots, and $2.75 small lots.

TORONTO HARDWARE MARKETS.

Toronto, Jan. 29.—With stocktaking still on in many stores trade continues on the dull side, the very mild weather also helping to keep business quiet. Even under these unfavorable conditions January business ought to show a satisfactory increase over last year.

Jobbers report booking on spring goods to be quite satisfactory, except in the case of harvest tools, the orders placed for these being on lighter than expected. Speaking generally dealers stocks are run down, owing to many months of conservative buying and with prospects brightening and a good season predicted on all sides it would seem to be the course of wisdom for dealers to assist the manufacturers by ordering their spring and summer requirements early. Following stocktaking there should be a general sorting up in shelf goods, mechanics' tools, and builders' hardware.

Prices in all lines keep firm with the tendency to advance if any change takes place. Those who book early, therefore, stand a good chance of being on the right side of the ledger.

SEASONABLE LINES—Colder weather has helped dealers to reduce stocks of skates and other snow and ice sporting goods, snowshovels also moving more freely in some districts. Buying of these goods is confined to small sorting orders.

SPRING GOODS—Lawn mowers, hose and sprinklers continue to sell freely for spring delivery, these lines moving better than harvest and garden tools, buying of which ought to be brisk next month. Freezers, refrigerators, screen doors and poultry netting are other lines included in bookings at present. We quote: 9-in. 3-wheel lawn mowers at $3.30 to $3.37; screen doors, stained, $7.80, and grained, $8.10 base.

BUILDERS' HARDWARE—A better trade is reported, many retailers who have finished taking their inventory having placed good sorting orders in the expectation of an active building season. Door sets, locks, escutcheons and bells are quoted at 50 and 10. In builders' supplies Canadian Portland cement is quoted at $1.70 per barrel f.o.b Toronto, and heavy straw plain and tarred building paper, $37.50 per ton.

ROPE AND TWINE—Demand is quite brisk for the season owing to the lower prices prevailing on rope. Pure manilla twine is now quoted at 11½ cents. Binder twine prices are not yet announced.

WIRE—Jobbers report a noticeable improvement in forward orders and the season has every appearance of being a large one. We quote: Barb wire f.o.b. Toronto: Galvanized barb, $2.85, and plain twist, $3.20. Coiled spring wire continues at $2.75 f.o.b. Toronto for No. 9. Galvanized wire is quoted at Pittsburg, base sizes, 6 to 9, $2.25. Less than car lots, 10c higher. Wire nails are unchanged at $2.30; poultry netting at 60 and 2½, and green wire cloth, $1.$6 in 100-ft. rolls.

HOUSEHOLD UTENSILS—There is a good movement in enamelware and tinware, with an active demand for sap buckets, sap spouts, etc. In food choppers, washing machines, sad irons, etc., there is also a lot of buying. Lamps and lanterns are selling seasonably. We quote $6.75 for cold blast lanterns.

HEAVY GOODS—Orders are increasing in quantity and a more active market is in prospect. Bar iron is unchanged at $1.95. Stove bolts are now 80 and 7½. Bright and steel wood screws, flat, 85 and 10, and round head 80 and 10 per cent. Brass screws are, flat, 75 and 10, and round, 70 and 10.

MONTREAL METAL MARKET.

January 29.—No change has been made in jobbing prices this week, although the tone of the metal market is weaker. This has not been due to any falling off in trade, for business has im-

proved steadily every week since the commencement of the year, and there is a feeling of confidence that was lacking some time back. But there has been a sagging in the primary markets in tin, copper and antimony, and this, of course, is reflected upon the local markets. With shipping facilities as they are local trade cannot be strong enough to withstand market conditions in New York or London. There is, therefore, a weaker tendency in tin, copper and antimony figures, although no definite change has been made. Spelter, however, remains firm and steady. Lead is about the same as it was last week. Canadian furnaces are still busy on orders taken during the winter, and are holding firmly to prices. Inquiries as to imported pig ion are numerous, and it looks as if the opening of navigation would be marked with some heavy shipments. It all depends on how near the prices can be made to the home article. The jobbing trade in all metals is improving, and little metal is going into stock. In fact every spurt in trade is felt at once from the consumer to the first hand.

The primary markets in tin and copper continue dull and weak. There has been no life to the buying, and a feeling almost approaching despondency has been prevailing. Both tin and copper have steadily lost ground. Hope deferred maketh the heart grow sick, and it is evident that the holding off of the revival in the demand has strained to breaking point the confidence of those who were so sure of a heavy purchasing movement, and were relying upon it. Spelter is firmer in the English markets, and the condition of the metal is very satisfactory. Lead is remarkably steady and does not show any signs of weakness in sympathy with tin and copper. In the States there is a feeling of disappointment that the pig iron and steel industries are not showing any signs of improvement. Apparently January will show smaller figures than December. Pig iron prices are firm, but trade is very dull. Cutting is going on in finished steel, and the rumor is spreading that figures generally will be reduced. It is being argued that to continue prices in the face of the stagnation is suicidal policy. But the advisability of cutting prices to force a demand has never met with general approval, and probably never will. There is much truth in the argument that a demand never waits for prices to tempt it.

PIG IRON—There is a tendency on the part of Canadian producers to hold to higher figures. Furnaces are still busy and prospects look exceedingly healthy. Inquiries are good, and should develop into heavy business. Good trade is expected in imported pig, as here again inquiries are most satisfactory. The demand for imported pig from store is steady, and there is no change in quotations: Middlesboro No. 3, $19.50; Summerlee No. 1, $21 to $21.50; No. 2, $20.50. Cleveland warrants are now quoted at 48s. and 4d., a decline of 5d. on last figures. Conditions in the Old Country are much about the same. Prices are fluctuating a little, but not enough to show any decided weakness in the situation. Producers are still holding out for higher figures for advanced shipping and that looks as if the position was fairly sound. In the States the situation is dull, and January is marked down as being quieter than the preceding month. Prices in pig iron are maintained, but in steel there is shading going on. Dissatisfaction is general at the poorness of consumption.

TIN—Although there has been no change in quotations for jobbing lots the situation is weaker owing to the decline of tin in the primary markets. We continue to quote 32c, but shading on this price has been noticed, and if no improvement takes place in London, prices here will probably be reduced. Trade is improving, and a fair amount of metal is being consumed. Inquiries are also good, but heavy buying will hold off until the situation becomes stronger. Tin has been very weak in the English market, and it is evident that there is more metal in sight than sellers like to see. Consumption is poor in New York, and unless the bulls take a hand again lower figures will probably obtain.

COPPER — Jobbing quotations of 15¼c still rule, although the price is much closer for large size orders. Unless there is an improvement in New York lower figures will rule here. Trade is improving, while inquiries, as in the case of tin, hold out good promise if the markets strengthen. Copper has broken badly in the English market, and it is necessary to go back to the early days of October to find similar figures, while in New York quotations have approached prices ranging in the early part of November. It is evident that the greatest feeling of disappointment is being felt over the continuance of the consumption stagnation.

SPELTER—There is no change in spelter price, and we still quote $5.50. Trade is steady, and with the firmness of the markets, conditions look promising. The London market is stronger, and spelter certainly is at present in the best position of all the metals.

LEAD—Lead is unchanged, and we still quote $3.70 for imported, with Trail at $3.60. The English situation keeps remarkably steady, and quotations keep well above the £13 mark. Consumption must be very good to keep such a fickle metal as lead in so steady a position.

OLD METALS—Steady buying characterizes the market. In sympathy with the crude metals prices on light copper bottoms and heavy red brass have declined. We quote: Heavy copper and wire, 11½c; light copper, 10c; heavy red brass, 10c; light brass, 6¼c; heavy lead, 2½c; wrought iron, $11; No. 1 cast, $13.50.

TORONTO METAL MARKETS.

Toronto, Jan. 29.—Not one price change is reported among the metals this week. The general situation is that the primary markets are very irregular. The British market shows a decline, but United States interests are trying to hold up prices. This condition is more or less reflected on the local market, although more from the standpoint of spectators do Ontario metal men regard the passing events in foreign fields. Local business is improving slightly and a decidedly good feeling is abroad.

Strange to say, very little is doing in iron and steel in the United States. Rail makers are confident that a demand for rails is coming and the steel car and wheel industries are getting under way. The tin plate plants are running at about 75 per cent. of capacity. The weakness in iron and steel appears to be due to the few contracts for structural material.

PIG IRON—More interest is taken in this line locally than was the case at the beginning of the month, and this, despite the slowness of trade in the U.S. The large metal dealers look for a marked improvement in demand and in prices during the present year. Orders at present continue for small quantities, and the prices remain at the old quotations. Canada Foundry is $18.50; No. 3 Middlesboro, $21; and Cleveland, $22.

COPPER—Up and down is this metal, the fluctuations in the primary markets no doubt having something to do with the small amount of copper asked for in the orders. Business, however, is brighter than it was a short while back. Prices are the same as last week: 15¼c to 15½c, which are better than this time a year ago.

TIN—The price is still $30.50 and the market is more steady at that figure. Supplies continue plentiful. Orders, while not large, are satisfactory, and more numerous than at the close of the year.

LEAD—While the price of lead at present is better than it was a year ago, it does not show the firmness of, say, last August, nor is it so steady as during December. Imported pigs are still at $3.80, but the orders are somewhat light and inquiries only fair.

SPELTER—Quotations at $5.50, the same as last report. Fair business is being done and the future looks bright indeed. All dealers report the metal as being steady, and they are satisfied with what trading is being done.

SHEETS AND PLATES—Canners picking up supplies still keep this line prominently to the front. There is a great diversity of price when the various grades are taken into account, but there are no changes in quotations from last week.

OLD MATERIALS—The last price quotations prevail with conditions unchanged from a week ago. Light copper is 11c to 11⅛c; heavy copper wire, 12½c; heavy red brass, 11c to 11¼c; heavy yellow brass, 8¾c to 9c; light brass, 6½c to 6¾c; heavy lead, 3c; zinc, 3¼c to 3½c; No. 1 wrought iron, $10; stove iron, $12; machinery cast iron, $14.50; rubbers, 8c to 8½c.

U. S. IRON TRADE.

Cleveland, O., Jan. 27.—The Iron Trade Review says:

In the parlance of the street there is "little or nothing doing" in iron or steel. A few bright spots illuminate the horizon, but in the main, the market presents the appearance of suspended animation. Agricultural material, which has always been good, shows a disposition to improve. Specifications for standard rails are also better than they were; but these two statements com-

prise all that can be said of an encouraging nature. The agricultural demand is not only confined to wire products, but embraces iron and steel bars, boiler tubes and small sizes of merchant pipe. The Illinois Steel Co. will start its No. 1 rail mill at South Chicago early in February, the first time this mill has been in operation this year: and because of the depressing nature of some of the rail specifications which are to be rolled at Gary, it has also been decided to start the mill at that plant next month. Fifty thousand tons have to be rolled at Gary at the earliest date possible, and with this accumulation to start on, it is believed the mill can be kept going continuously afterwards. New rail business booked this week aggregates only twelve thousand tons, but there are approximately 100,000 tons pending. Light rails are very quiet, and prices can be shaded from one to two dollars a ton. There is very little doing in either sheets or plates, and established prices of both can be shaded without difficulty. There is also sharp competition in riveted steel, and some low prices are being made. Scrap continues its downward course, each transaction being a law unto itself in the matter of prices. Pig iron remains stationary, no material change being noted from conditions reported a week ago.

FUR MARKET.

Montreal, Jan. 29.—Buying continues good, and the tone of the market is firm. Prices remain unchanged, and we quote: Mink, $5 to $6.50; marten, pale, $4 to $6; dark, $8 to $20; fox, red, $2.50 to $4.50; lynx, $5 to $12; otter, $15 to $25; fisher, $5 to $9; weasel, 25c to 35c; muskrat, 15c to 25c; Canadian coon, 75c to $1.25; skunk, 40c to $1.25; bear, large, $8 to $10; small, $3 to $5.

MAKING STEEL DIRECT FROM ORE

A new process of making tool steel from common and low grade ore and old metal is being experimented with at the machine shop of John Whitfield & Son, Toronto, and if successful a syndicate may be formed to take over the process and develop it on an extensive scale. Mr. Whitfield, while not wishing to speak authoritatively, is inclined to the opinion that the Canadian iron industry will be much interested in the work. A rusty wire nail transferred into a razor is one of the exhibits shown as a result of this process and it is said chisels have also been made. Some Subdury men are believed to have invested money in the process, and they will form the syndicate which, it is said, will operate in Canada.

The names of Hon. Frank Cochrane, Ontario Minister of Mines, and William Mackenzie's have been mentioned in connection with the process, but only in a general way, the former because of what the process will do for the steel trade in Ontario, and the latter because some time ago he was interested in a somewhat similar undertaking.

The daily papers were somewhat in error in stating that the cost of production by the new process would be but a fraction of the present cost, lowering the price of tool steel from $1.03 to 10 cents a pound. At present there are a number of grades of tool steel selling on the market at 10 cents a pound and less.

While the working of this new process is not at present made public, the name of the new syndicate—the Canada Steel Company—leads one to infer that it is connected with the Canada Steel Products Limited, which received a charter from the Dominion Government through Canadian Northern Railway interests some time ago. The plan was to utilize what is known as the Lash process, a method owned by Buffalo parties. A plant was to be located near some waterpower in Ontario, where electricity could be developed, which would give heat sufficient to change the ore into steel without sending it through the pig iron stage and Bessemer process. In fact the Lash process is thought to be an improvement on the open-hearth process. The ore is crushed and run through a refining process, mixed with carbon, sawdust and fluxes and then made direct into steel, thus doing away with the middle treatment.

HARDWARE TRADE GOSSIP.

Ontario.

Fred G. McBrien, Toronto, is on a fortnight's trip to New York and New England cities.

A. J. Munro, accountant for the Canada Paint Co., Montreal, was a visitor in Toronto during the week.

The head office of the P. L. Robertson Mfg. Co., makers of screws, is to be removed from Hamilton to the factory at Milton.

A. B. G. Tisdale, of the Brantford Roofing Co., Brantford, was a caller at the Toronto office of Hardware and Metal during the week.

Ernest A. Humphries, of A. W. Humphries & Son, Parkhill, has returned from a holiday visit to New York. Mrs. Humphries accompanied him.

Mr. Dunbar, of the G. A. Richardson hardware firm, Guelph, has resigned his position as manager. Arthur Watson has been asked to take the now vacant post.

W. C. Thompson & Sons, hardware merchants, Inglewood, have sold their business to Arthur Spratt & Sons, who will carry on plumbing and tinsmithing in connection.

A thief secured an entrance to Gillespie Bros.' hardware store, Orangeville, by breaking a pane of glass in the store and slipping back the bolt. He secured about $3.

Stanley Brock, western manager of Somerville, Ltd., Toronto, and the Standard Ideal Co., Port Hope, who has been visiting the east, has returned to his home in Winnipeg.

The Canada Metal Co., Toronto, is suing the Canada Tin Plate & Sheet Steel Co., Morrisburg, for $709, the amount of bills of exchange, and $20 costs for material supplied that concern.

Quebec.

W. H. Thorne, St. John, N.B., has been on a visit to Montreal.

I. C. Stewart, of the Maritime Merchant, Halifax, has been paying a visit to Montreal.

J. H. Brent, one of the western representatives of Caverhill, Learmont & Co., Montreal, has been on a visit to headquarters.

F. C. Lariviere, of Lariviere Incorporated, Montreal, has been re-elected second vice-president of the Montreal Chambre de Commerce.

J. H. Roper, Montreal, is sending out month by month a very pretty card calendar depicting a girl becomingly arrayed in a costume suitable for the various seasons.

J. R. Mackay, one of the eastern representatives of Caverhill, Learmont & Co., Montreal, has just returned from a trip to Scotland, where he has been spending Christmas.

Schuchardt & Schutte, who are represented in Canada by Paterson, Jenks & Co., Montreal, have removed their New York office and warerooms from 136 Liberty Street to the West Street Building, 90 West Street, New York.

Two games were played in the hardware league last week at Duluth Rink. In the first game Frothingham & Workman defeated Caverhill & Learmont by 3 to 2; while amid great excitement Starke-Seybold defeated Lewis Bros., after overtime play, by 3 to 2.

T. H. Newman, of Caverhill, Learmont & Co., Montreal, left that city on Wednesday for Bermuda where he intends to stay for a few weeks. Mr. Newman, although attending to business, has not been in the best of health for some time, and it is hoped that the change and rest will set him up again.

Western Canada.

F. G. Brereton, of F. W. Lamplough & Co., Montreal, was in Winnipeg early in the week on his way to the Pacific coast on a business trip. He called at the Winnipeg office of Hardware and Metal.

EXHIBITORS AT CONVENTION.

Recent additions to the list of firms intending to make exhibits at the Waldorf Hotel, convention headquarters at Hamilton, on Feb. 9, 10 and 11, include the Metallic Roofing Co., Toronto; Boss Washing Machine Co., Cincinnati; Dowswell Manufacturing Co., Hamilton; Shurly & Dietrich, Galt; Supreme Heating Co., Welland; Canada Wire Goods Co., Hamilton, and the Gillette Safety Razor Co., Montreal. Indications point to there being over two dozen exhibitors, a full list of which will be given next week.

THE COLLECTION DEPARTMENT.

"We are meeting with success with the collection forms," writes President Hambly, of Barrie. "We have collected about $50 since Dec. 1, and have several others badly scared and asking us for time to settle.

"A delinquent at Udney, Ont., has forwarded $1.20 to the Secretary without giving the name of the firm the money belongs to. Will the owner apply for the coin?"

Send on any questions you have to the Secretary, or keep them and drop them in the box at the convention. But think out some good questions before the convention opens.

Trade News From Atlantic to Pacific

Eastern Canada

Annual Meetings of the Boards of Trade at Montreal, Halifax, Kentville and Dartmouth.

HALIFAX.

January 23.—The Halifax Board of Trade met this week and elected officers for the ensuing year. The board now has a membership of 562, and is in a flourishing condition. The retiring president, George E. Faulkner, M.P.P., said in part:—

The differential rate of one cent per hundred pounds against Halifax as compared with other Atlantic ports on export freight originating west of Montreal, and on import freight destined to points in the west, has recently been the subject of discussion and agitation by the board, and the fight for the removal of this discrimination against our port must be continued until the handicap ceases to exist.

A considerable amount of time and attention was given to investigating and in some cases furthering certain proposals for establishing manufacturing industries in the city, and it is confidently expected that there will be some favorable results from these efforts.

The general condition of business in Halifax during the year may be regarded as fairly satisfactory—all things considered. The usual trade reports indicating the conditions and general results in various lines of business are appended. If not a growing time, there were some compensating factors and considerations. Failures were few and unimportant. A careful business policy was apparently the general programme, with the resultant condition that stocks are well in hand, the proportion of liabilities to assets among traders in safer relationship than in periods of greater activity, and consequently a generally sound business situation, with a favorable outlook for the New Year.

The new officers elected were:—President, J. A. Johnson; vice-presidents, Geo. E. Faulkner and A. Mackinlay; council, A. M. Bell, C. H. Mitchell, W. S. Davidson, S. M. Brookfield, G. S. Campbell, J. E. DeWolf, Edw. Clayton, J. A. Neville. Arbitration board—A. M. Bell, G. E. Smith, G. S. Campbell, J. E. DeWolf, S. M. Brookfield, G. E. Faulkner, H. G. Bauld, I. C. Stewart, W. A. Black, D. MacGillivray, C. H. Mitchell, Edw. Clayton.

The report submitted at the annual meeting of the Kentville Board of Trade which was held this week, shows that the past year was a most successful year. The feature of the meeting was the address of the president, W. P. Shaffner. He reviewed with satisfaction the business transactions of the year, both for the town and the County of Kings, and dwelt on the hopeful outlook for the coming season. The farmers who met with enormous financial losses in the shipment of fruit in 1907 were, during 1908, owing to the better prices and the good demand for apples, able to liquidate much of the floating debt and meet their present obligations with reasonable promptness. The officers elected for the year were:—President, W. P. Shaffner; vice-president, Dr. W. B. Moore; secretary-treasurer, A. E. Dunlop; council, William Yould, A. E. Calkin, M. G. DeWolfe, E. B. Newcombe, C. W. Webster, J. G. Calkin, C. O. Allen, F. P. Lyons.

The annual meeting of the Dartmouth, N.S., Board of Trade was held this week, and there was an exceptionally large attendance of members. The feature of the evening was an address by H. J. Logan, ex-M.P., on the Intercolonial Railway, in which he advocated a change in the management of the road and the taking over of the branch lines by the Government as feeders for the I.C.R. The president, Arthur C. Pyke, suggested the formation of a 10,000 club with the object of using every means to make the population of Dartmouth 10,000 in the next 10 years.

The election of officers resulted as follows:—President, C. E. Creighton; vice-president, W. C. Bishop; second vice-president, J. Forsyth; council, W. L. Bishop, J. A. Calder, Jas. Douglas, Jas. Harrison, A. C. Johnston, A. C. Pyke, Dr. A. H. MacKay, R. B. Simmonds, H. W. Hewitt and J. W. Vidito.

MONTREAL.

January 27.—The annual election on Wednesday for officers of the Montreal Board of Trade resulted as follows:—President, Farquhar Robertson; first vice-president, G. L. Cains; second vice-president, R. M. Ballantyne; treasurer, J. R. Binning; members of the council, William Agnew, John Baillie, G. F. Benson, Jeffrey H. Burland, Huntley R. Drummond, Jos. Ethier, W. P. Hunt, Robert Ironside, F. R. Kinghorn (Montreal Rolling Mills), R. Wilson Reford, J. A. Vaillancourt, Norman Wright; board of arbitration, A. A. Ayer, James Carruthers, George Caverhill (Caverhill, Learmont & Co., Montreal), W. W. Craig, Thos. J. Drummond (Drummond, McCall & Co., Montreal), C. B. Esdaile, W. I. Gear, E. B. Greenshields, Arthur J. Hodgson, Alex. McFee, John McKergow, Robert Reford.

T. J. Drummond, in his farewell address, dwelt upon the improvement that had taken place in the harbor and channel of Montreal, and pointed out the necessity for a dry dock. He was not fully satisfied with the present state of the question of connecting Montreal with the Transcontinental, and he urged that the city's claims in this respect should be diligently pressed. "It is inconceivable," said Mr. Drummond, "that Montreal should be sidetracked by this great transcontinental line, but just the same we should continue to press our city's claim to direct connection."

After dealing with civic matters Mr. Drummond discussed Canada's foreign trade relations and referred to the reciprocity movement with Canada which had taken place in the States. He said that they must realize that any reciprocal arrangement with the United States would be detrimental to their railway, industrial, commercial and general interests. It was certain that any commercial union with the United States would sooner or later mean political union.

"Looking at the question of reciprocity with the United States, apart altogether from imperial preferential trade or British connection, while I can see much that would be to the benefit of the United States, I can see practically nothing but loss to Canada. We have mortgaged great national assets to

T. J. DRUMMOND.

build transcontinental roads, so as to increase the trade between the east and the west. Reciprocity would divert the trade to the south.

"We have been building up our nation industrially, agriculturally and otherwise, and taken as a whole reciprocity would be damaging, and in many cases disastrous to all our interests. We have reached a point in national development where success is assured. We must guard our position and guard it carefully."

Mr. Drummond's address was warmly received and met with general approval.

In the annual report reference was made to the iron and steel business during the year. These industries naturally felt the trend of the times, but for the main part the Canadian mills were able to keep going full handed without closing for any lengthy period. Recent development work and exploration show that Canada has immense mineral fields that are yet to be taken full advantage of; this applies to vast iron and coal deposits as well as to the valuable mineral in the Cobalt region,

Ontario Trade Items

Business Changes at Ripley and Ridgetown—Ernest Humphries, of Parkhill, Inured at Brantford—Galt and Belleville Get New Industries—Hamilton and Peterboro to Appoint Industrial Commissioners.

BELLEVILLE.

January 25.—Your correspondent had interviews with local hardware dealers and found them all in a satisfied mood from present conditions, although in some lines there has been a serious drawback in such articles as snow shovels and coal sifters. The early part of the season was great in the demand for skates and hockey utensils, but no sooner had these been purchased than the weather man got busy and gave us mild weather. Now the hardware men have a big surplus on hand of winter sporting goods, and reduced prices in these lines are the general rule. However, few of the hardware merchants are reporting much surplus of the holiday stock.

It looks as if Belleville will be blessed with an up-to-date street car service in the near future. At a meeting of the city council, Monday night, January 25th, a proposition was made from a prominent firm of New York capitalists proposing the establishment of a city and suburban line, extending from Belleville to Trenton, through Trenton to Prince Edward County, from that county to this city, from here to Shannonville, passing the two big cement works, from there, through Thurlow into Corbyville, through Corbyville to this city. Assistance will be asked from the city, and the company promises to spend $800,000. The matter is to be discussed at a public meeting to be held next week.

For some time there has been considerable talk in this city that the Burrell Rock Drill Co., one of the industries of the city, was about to remove their industry to some place up west, as several inducements had been offered them. The company had a grievance against the city in a matter of assessments. The council got busy and as a result a conference was held between Mr. Burrell and a committee from the council, with the result that the company have proposed an agreement which if carried out will induce them to remain here.

The Point Ann Quarries, is the name of a new company which is doing a large quarrying business at the Point, now famous for cement production. The head office and storage plant will be in Toronto. The company has secured property between the works of the Belleville Cement Company and the Lehigh Cement Company. They intend to commence on a large scale the crushing of stone for concrete work. Three crushers are to be erected and the wharves on the bay front with large storage bins. From these bins all stones are to be conveyed by elevators into the holds of vessels for shipment to Toronto. It is expected that employment will be given to over one hundred men when the quarries are in full operation. Most of the timber for construction work is already on the ground. M. J. Haney, the well known contractor of Toronto is at the head of the company. He has invented a plan whereby cement walls can be erected in a tithe of the time it now takes, besides making a far better job of it. G. M. Stewart, of Toronto, is to be resident manager.—H.C.M.

PETERBORO.

Jan. 24.—The Peterboro Electric Meter Co., manufacturers of electrical heating irons, heaters, toasters, meters, etc., is experiencing increased business. Large consignments of their goods are shipped weekly. They have a staff of ten experienced workmen and are working ten hours overtime daily.

Hardware business in the city remains fairly brisk in spite of the dull season. One dealer reported that he has had a splendid sale of stoves, particularly ranges, the burning of coal for kitchen work seemingly displacing the old-fashioned wood burners.

The town of Sterling, which suffered heavily from fire recently, has purchased a new fire engine and 500 feet of hose. In short time the town intends to purchase more hose.

Adamson & Dobbin installed the heating system in the new Margaret Cox Home for Girls in this city. It is the old Barnardo Home improved and enlarged as a gift from Hon. Geo. A. Cox.

The S. H. Knox Company will open a 15-cent store in Peterboro about February 1.

The city council have almost decided upon the plan of securing a commissioner of industries for Peterboro. who besides looking after industries, will also endeavor to bring as many excursions as possible to Peterboro. The Manufacturers' Committee are dealing with the question and their final decision is expected shortly—H. T.

HAMILTON.

January 26.—Interest in the coming convention in this city early in February of the Ontario Retail Hardware and Stove Dealers' Association has reached fever heat among the members of the association and the manufacturers who intend having exhibits at the Waldorf hotel, the convention headquarters. In fact, the convention is coming at a time when the "Boom Hamilton" slogan is being worked overtime and when the business interests are anxious to seize onto any scheme towards propagating this idea. Of course, there is not a great deal remaining for the local members of the association to do in regard to the convention in view of the fact that arrangements for it are almost entirely in the hands of the secretary. However, whatever they have to do they are making ready for it willingly and with zest. Owing to the amount of time required the visit to the various manufacturing plants, the number of places which would like to receive visits from the delegates has had to be reduced. R. B. Gardner, proprietor of the Waldorf hotel, is making extensive arrangements for providing for the comfort of the visitors and also in displaying the exhibits. The large banquet hall on the second floor will be given over to the exhibits and the sessions of the convention will be held in the drawing rooms. There have been so many applications for exhibiting space that Mr. Gardner expects to have the rotunda and other prominent spaces throughout the hotel devoted more or less to the display. "I intend to give then the free run of the hotel and they can turn it into a hardware store if they wish," is the manner in which Mr. Gardner expresses his intentions.

It is expected that within a short time construction will be started on a new building for the Y.W.C.A., to cost in the neighborhood of $33,000.

John Milne, of the Burrow, Stewart & Milne Company, is receiving the congratulations of his numerous friends on having reached his 75th birthday.

There was a small fire at E. T. Wright's tin works to-day. It is supposed that the heat of the sun ignited some grease in the tinning room. The prompt work of the fire department prevented the flames from spreading.

The Hamilton Steel and Iron Co. has secured a large order of steel for one of the Hill railways in the Northwest. The order comprises 300 tons of angle iron for connecting rails, and 160 tons of railway spikes. There will be 20 carloads of steel in the order.

The receiving of a portion of the construction work for the Hydro-Electric Power Commission by the Canadian Westinghouse Company will mean a big thing for Hamilton. The plant has been running on short time for a considerable period and as it employs a large number of hands the receiving of such a big order will mean the employment of full staffs and the consequent circulation of more money among the merchants. It is understood that the work has not yet been apportioned by the Government between the Canadian General Electric Co. of Peterboro, and the Westinghouse Co.

The Canadian Hart Emery Wheel Co. has issued a writ against the Brantford Emery Wheel Co., asking for an injunction to restrain the latter company from using any trade mark similar to that used by the plaintiffs company or taking any action to give the impression that it is selling the goods of the plaintiffs.

The Hamilton Steel and Iron Co. was commended by Justice Teetzel last week for its system of looking after injured workmen, John Southorn, an employe who was terribly burned with molten metal, sued for $10,000 damages. An agreement was arrived at, but Justice Teetzel said he was surprised to find the company so generous in providing for an injured workman as instanced in the case.

There is a strong agitation on at present among the merchants and manufacturers in favor of an Industrial Commissioner. So far the council has not taken any action in the matter, but the agitation is being boomed for all it is worth. It is also suggested that a business men's club be formed to work in conjunction with the commissioner.

The Hamilton Steel and Iron Co. is instaling Galey's dry air blasts in connection with their furnaces. This will mean that a much greater output will be derived from the furnaces.

D. L.

GALT.

Jan. 27.—J. O. Poland, Pittsburg, general inspector for the Dominion Natural Gas. Co., is in town for a couple of weeks, making a thorough investigation of the system in Galt. Recent disastrous explosions have stirred the company to action, and the inspector is taking drastic measures in Galt. All connections at all faulty are ordered taken out and replaced correctly. The use of rubber tubes as extensions is also condemned, the latter being thought to be responsible for a number of explosions.

Hardwaremen report trade as exceptionally brisk, with a big demand for paints and oils. "The average citizen is discarding the use of carpets in favor of rugs, and this means that the floors must be finished up nicely, hence there is a large demand for floor preparations," said one hardwareman.

Jas. Allen, the Main St. hardwareman, has again been appointed to the Parks Commission.

The Parkin Elevator Co., of Hespeler, have completed the work of replacing fire escapes on the town hall and opera house.

The Malleable Iron Works are running a night shift in an effort to catch up with orders.

McGregor & Gourlay, employing four hundred men, have resumed the ten-hour day.

The Canadian Potato Machinery Co., a branch of the Champion Potato Machinery Works, at Hammond, Ind., have definitely decided to locate in Galt. For a week past the council has had the matter in hand and arrangements have now been completed. The new industry will not ask for any concessions from the town, locating here because of the natural attractions, railway facilities and the character of the labor market in Galt. Four acres of land have been purchased on the Stone Road, and a shop for the manufacture of potato and other machinery will be erected at once. The initial building will be 100 feet by 80 feet. Walter H. Schrieber, of Hammond, formerly of Ottawa, will be resident general manager.

Dealers report an increased demand for electric irons, a line handled by a few firms in Galt.—B. E. C.

SUDBURY.

January 20.—At last night's meeting of the Board of Trade James Purvis, hardware merchant, who has been president for the past three years, was honored by his fellow citizens in the following address (accompanied with a gold-headed cane) :

"The members of the Sudbury Board of Trade cannot allow you to retire from the office of president without expressing their appreciation of the valuable services rendered by you to this organization and the Town of Sudbury. During your term of office you have presided over our meetings with tact and ability, and more than any other member aided in making the board an institution of inestimable value to the Town of Sudbury. We trust that you may be long spared to give the board the benefit of your wise counsel and mature judgment. Although a man of strong convictions, you have had the happy faculty to advocate them without giving offence to those who might differ from you. We ask you to accept the accompanying cane as a souvenir of your term of office, and of the good-will and esteem in which you have been held by the entire membership ; sentiments which we can assure you are likewise entertained by your fellow citizens at large."

Mr. Purvis gave a brief resume of the work accomplished during 1908, which, he stated, had largely consisted of deputations to Ottawa and Toronto for the purpose of interviewing tne Dominion and Provincial Governments. He instanced in particular the Gowganda road which had its origin through the efforts of the Board of Trade.

GUELPH.

Jan. 26.—The I.O.O.F. talk of erecting a large solid brick building of imposing appearance on some good site in the city, with the ground floor for business establishments, the second floor for a Y.M.C.A., and the third floor for the I.O.O.F. lodge rooms.

J. A. Turner, who has erected nine houses in one block during the past year, contemplates erecting a block of five more.

Last year despite the depression, the building trades in this city were particularly active. There were several large building operations under way at the same time, including the new Armory Building, the St. Patrick's ward public and the Dubli St. separate schools. New residences seemed to be springing up all over the city, persons who had a little money to invest were anxious to build. A reliable record of last year's building permits have not been kept, but there were about 150 issued and a lot of buildings went up without permits.

The Guelph Light and Heat Commission have 600 more consumers of gas in this city than they had this time last year, and about 600,000 feet more gas is being produced. The local hardwaremen report an increase in the sale of gas stoves and ranges following the reduction in the price of cooking gas to 40 cents per thousand feet.

The employes of Bonds beat the employes of Kloepher's in a fast and furious game of hockey a day or two ago.

Conn & Company, the contractors who have the work of laying the pipe line for the new waterworks system are experiencing a great deal of trouble in laying the pipe through a swampy piece of land that lies in the course between the city and the springs. The running water inside and outside of the pipes does not permit the cement to set in the pipe joints. First of all calking from the inside was tried, men going into the two-foot pipe with candles and trowels of cement and when this proved unsuccessful, it was found necessary to use pumps to keep pipes dry until the cement had set.—S. N.

CHATHAM.

Jan. 26.—"I haven't known in years so quiet a spell as we have had since last Thursday," remarked a hardwareman to-day. The quiet spell is due to the warm weather. This has "taken the bottom out of the roads," with the result that few, if any, country people have come to Chatham. Even if they did, it would be practicably impossible for hardwaremen to do much business, the state of the roads rendering transportation out of the question.

A. D. Westman, of Westman Bros., is already urging the 1909 Dominion Day celebration along. "We want a day that will bring people into Chatham" is his view of it; and he thinks that now is not too early to begin.

W. Lloyd, of the Lloyd Manufacturing Company, Wingham, visited Westman Bros. last week.

S. J. Rindle, tinsmith, of Ridgetown, is removing his tin shop to Brantford.

The Erie Basket Co. of Leamington, has recently added to its plant by installing machinery for the manufacture of all classes of handles.

Twenty-two Amherstburg merchants have signed an early-closing agreement, whereby they close their stores at 6 o'clock every evening, Saturdays excepted, between Jan. 18 and March 31. Thereafter they will close at 6 o'clock on Tuesdays and Thursdays. The move is experimental, and, if it pleases, there is a likelihood that it will be adhered to for good.

An unexpected move in the direction of municipal ownership was made at the city council last night, when Ald. Brackin put through a resolution authorizing Mayor Westman to consult the city solicitor with reference to the feasibility of expropriating the plant of the Chatham Gas and Electric Light Company. The civic lighting plant furnishes street lights, while the private company looks after the incandescent field—W. P.

LONDON.

January 26.—Manufacturers and merchants interviewed agree that trade conditions at present are far ahead of what they were this time last year, and therefore feel optimistic as to the outlook. The representative of a leading financial institution states that within the past few days his concern has received upwards of $100,000 placed with it for investment. Railway officials state that though this is the dull end of the year with them, business is better than they expected it would be. Wholesalers report spring orders far larger than a year ago, with payments promptly met. Here are the views on the situation of a few of the manufacturers :

Col Gartshore, McClary Mfg. Co., said : "While we are slack in some departments we are very busy in others, and are working full time. We have 850 on our pay roll, and orders are coming in well from all parts of the country. We expect a big season."

George White & Sons, engines, etc., reported that their staff of 160 men were working 60 hours a week.

The Dominion Office and Showcase

Works reported that when the slump came two years ago it affected their business about three months before it did most firms. For four months, however, they have found business very good. They are now working 60 hours a week and have 30 men.

The London Rolling Mills report business is a great deal better than it was last year. They are working full time, ten hours a day, for six days a week, and have 125 men. Business has been steadily improving since May last in line.

The Grand Trunk Car Shops have 450 men on their pay roll and are working 11 hours a week.

It is definitely stated that the burned Globe Casket Works will be rebuilt here.

The tinware and stove business of the late H. J. Boyd, one of the oldest in the city, has been purchased by John Master, for many years in Mr. Boyd's employ, who takes possession at once.

F. T. Y.

INGERSOLL.

January 26.—Jas. Sinclair, who has been engaged in the tinsmithing, plumbing and stove business here for many years, has been re-appointed chairman of the Board of Health. This is the nineteenth consecutive time that this honor has been conferred upon Mr. Sinclair, and it is a distinction which it is doubtful if anyone has ever enjoyed before. During his long tenure of office Mr. Sinclair has been an energetic and capable officer and has always taken a lively interest in all matters pertaining to the health of the town.

The spring-like weather which has prevailed for the past week does not appear to have had a depressing effect on business. The hardware merchants have probably been in a dilemma as to what are really "seasonable articles." In the surrounding districts many of the farmers have been plowing, which is certainly remarkable in this part of Ontario for the month of January.

CAMPBELLFORD.

January 25.—T. S. Tait, of Campbellford, is busy this week moving into his fine new store in the new Kerr block. This store has all the modern improvements and is as fine a hardware store as one can find in Ontario towns.

G.

BRANTFORD.

January 26.—On Wednesday morning last as E. A. Humphries, hardware merchant, Parkhill, and wife were returning from a trip to New York, the former left the train to telephone some friends. The telephone cabinet door became fastened, delaying his return to the train, which commenced to steam out. He ran across the platform but fell on the slippery ice there, fracturing his left shoulder. He is resting as well as could be expected.

As mentioned by your correspondent last week, a number of merchants here have been "stung." The publicity given to the affair has brought out the fact that between 150 and 200 merchants of the city have been the victims. The trouble is over shipments of floor oil, linseed oil, and other such products of the Liberty Drug & Oil Co., New York, with a branch at Hamilton. A meeting was held in the Y.M.C.A. last evening when it was unanimously decided to act together and defend themselves against any suits which may be brought against them.

Bradley Chambers, Welland, has secured the plumbing contracts in two new houses for John Goodwillie, on State Street; in J. H. Burgar's new residence on Avenue Place, and A. W. Fritz's new building on Franklin St.

The Goold, Shapley & Muir Co., manufacturers of heavy hardware and machinery, extended a banquet on Friday evening to their traveling and office staff.

During the month of February the Grand Valley Radial Railway will give cheap rates from Galt and other points to Brantford. Single fare rates will be obtainable during the week, and on Saturdays a 50c return rate will be given from Galt. The company and the local merchants propose working together in the bringing of people here, especially on market day. This step has been taken as a result of the very successful excursion held to this centre a few days before Christmas.

Plumbers and steam fitters are now at work in the new school building at Paris.—A.W.

RIPLEY.

January 23.—H. G. Goodhue, Ripley, has sold his hardware business to Palin & Munn, who took possession this week. Mr. Palin was a member of the firm of Palin & Pinder, Goderich, and Mr, Munn is a son of A. Munn, of A. Munn & Son. Ripley. Mr. Goodhue has purchased the hardware store of J. A. Beattie, Ridgetown, and takes possession immediately. He was presented with an address and a gold locket and chain by the business people of Ripley just previous to his departure for Ridgetown.

D. W.

The Prairie Provinces

Complaints About Express Rates to be Taken to Railway Commissioners—Large Lumber Company Establishes its Headquarters at Lethbridge.

SASKATOON.

January 22.—E. Biglow, manager of the Cairns hardware department, has returned from a business trip to Winnipeg, where he visited a number of the wholesale houses.

At the annual meeting of the Board of Trade held on Monday night, M. Isbister, of the Second Avenue hardware store, was re-elected president for the present year. Mr. Isbister, in addition to attending to his business, presided over the affairs of the board all last year, which has been the most progressive year which the board has yet had. His re-election to the office is a tribute to his good judgment and business capacity. The report submitted at the annual meeting showed that the year had been a strenuous one for the executive, which, besides meeting regularly once a week, held numerous special meetings when occasion arose. Much work had been got through by the board, and an extensive advertising campaign carried on throughout the year. In its capacity the board was the means of getting the Goose Lake railway into operation, besides effecting many other improvements in the interests of the community.

An important matter before the board at the present time is the excessive express rates which are being charged. A delegation has been appointed to place the matter before the Board of Railway Commissioners, which meets at Regina on Feb. 11. The indefatigable commissioner of the Board of Trade is F. M.

M. ISBISTER, SASKATOON.

Selanders, to whose enthusiasm and energy much of the work accomplished by the board is due.

To prevent frost gathering on the windows of his store, J. F. Cairns has had them ventilated by means of air holes which keeps both sides of the glass at the same temperature.

D. G. R.

LETHBRIDGE.

January 20.—J. E. Flait, of Naismith & Flait, Morse, Sask., is managing C. W. Gray's hardware business during his absence in the east.

One of the biggest business deals of the past year was put through last week when the Citizens' Lumber Co. purchased the lumber business of E. Adams. The Citizens' Lumber Co. have established seven yards and expect to establish a number of others, which goes to prove the faith this company have in southern Alberta. The headquarters is in St. Paul, and they have been operating through the Dakotas, but are selling their yards there as fast as possible, with the intention of opening up in this country. G. J. Hausch will be the general manager and Lethbridge will be the headquarters for this country, Needless to say that Lethbridge and the whole of southern Alberta extends the glad hand to the company and its staff.

Although it has been cold and some snow has fallen there is no sleighing here. The Christmas trade was the best in the history of the town, and cash was paid. Building was in full swing till Dec. 31st, but has stopped since the cold snap struck us. The outlook for the spring is fine and many people are

looking for a big rush of business as soon as the warm weather comes.

Round Street presents quite a different appearance to what it did last spring. During the past eight months several fine two-storey brick blocks have been erected on this street. The Stafford block, a fine, two-storey building with pressed brick and stone front, 50x80, is occupied by the Stafford-Agnew Co., hardware, and George Bradbeer & Co., groceries. The Bryan block, 50x70, is occupied by the Eureka theatre and the McKeown Hardware Co. The Oddfellows block, 50x60, is just completed and is occupied by Skeith & Tilley, real estate, and N. H. Murray, restaurant. The upper floor contains a very fine lodge room and three suites of offices. The Sheppard block, 25x70, and the Begin block, 25x65, are not quite completed, but will be ready for occupation in a couple of months.

The public school ($90,000), fire hall, ($45,000), and Presbyterian church ($35,000), are all nearing completion.

The Bank of Commerce recently bought two lots on Round Street for $24,000, and will erect a fine bank building this year.

Architect MacDonald is now preparing plans for a two-storey business block 50x90, for Bowman & Johnstone, to be erected on Redpath Street.

Architect Dodd is preparing plans for a three-storey steel and reinforced concrete block 50x125, to be erected on Redpath Street in the spring for R. E. Sherlock.

S. A. C.

British Columbia

Large Pulp Industry for Vancouver Island—Review of the Year's Trade at Vancouver—Revelstoke Hardware Clerks Capture a Crook.

VANCOUVER.

January 23.—Now that merchants have squared away after the year's business, it has been found that the trade during 1908 was very satisfactory, and while not quite as good on the whole as in 1907, it was much better than expected. The year before last was an abnormal one, and in the twelve months preceding 1908 the advance in trade over 1906 was 50 per cent. Although last year was one of depression, the increase in 1908 over 1906 was 48 per cent., showing that even in slack times the business came up to within two per cent. of the unusually good times. This is very encouraging, and hardware men expect the very best this year, with lumber camps opening up, canneries to operate, since this is the expected big year for salmon, and general conditions being better. That last year's trade was able to show up as well as it did was owing to the general development that is going on in British Columbia, and new accounts are coming in from the many new places that are coming into existence. This is the advantage of a new country, and with the almost unlimited areas of this province, benefits of this kind will accrue for many years to come.

A feature of the increase in trade has been in the junk business. This is well looked after here, an indication of which is that the old metal of the big mill at Bellingham, recently destroyed by fire, was disposed of by tender to the Vancouver Junk Company for $6,000. As an instance of the business done, one order alone sent amounted to $2,000. Junk is picked up all along the coast, and most of it goes through from here to the eastern cities where it is required, principally Chicago, Toronto and Montreal.

Another proposition that will bring business to the different lines of the hardware trade is the establishment of power companies for the development of water powers. The Stave Lake Power Company has done work off and on for a couple of years on the Stave River, 40 miles from Vancouver, and now English capital has been secured to rush the work to completion. This will mean a big electric generating plant on the Stave River, and the construction of some miles of electric railway, for the plans at present include that. The company will be associated with the Burrard, Westminster and Boundary, and the V.W. & Y., so as to utilize the charters held.

An English company will also develop a water power on Adams River, near Shuswap, to supply the towns of the Okanagan Valley with electric power. The matter has progressed so far that notification has been sent to the different municipal councils that the company is ready to make contracts.

A passenger on the steamer Aorangi, which arrived from Australia and Honolulu the other day, was O. S. Chapin, of the Chapin Company, wholesale machinery merchants, etc., of Calgary, who was returning from a trip, accompanied by his wife. They have left for their home in Calgary.

A visitor during the week was George Dowswell, Hamilton, Ont., representing wholesale hardware. He reports conditions much better than they were six months ago.

NEW WESTMINSTER.

January 23.—The man who committed suicide in Victoria last week has been identified as J. Kittlemin, who opened a plumbing shop in this city about three months ago in the rear of the Edison Theatre. About two weeks ago he disappeared. In committing suicide he took every mark out of his clothing, and was identified by means of a photograph which the Victoria police sent out.

VICTORIA.

January 20.—Two money by-laws were passed by the ratepayers last week, one for school work at a cost of $65,000, and the other for sewers to cost $50,000. The by-law for $35,000 to remodel and renovate the city hall was defeated.

The Quatsino Power & Pulp Co., of this city, have assigned their entire plant and pulp limits, consisting of 55,000 acres of timber lands on Vancouver Island, to the Western Canada Pulp & Paper Co. The company propose the immediate erection of a large pulp and paper mill on Quatsino Sound for the manufacture of news and wrapping paper. The company is capitalized at $1,500,000. A pulp mill architect from the United States is to have charge of the construction work.

Trade during the past week has been fairly good and building continues brisk, a good many small houses being in process of construction, and several large buildings are just commenced. The outlook for 1909 is very promising.

What might have been a very serious fire started on the premises of the Hydraulic Supply Manufacturing Co., at present engaged on a contract for pipes for Victoria waterworks system. The asphaltum in the tank which the finished pipe is dipped in to be coated caught fire and for a time looked rather serious, fortunately, owing to rain, the woodwork of the building was wet and the fire was kept to the place where it started. The loss will not be very heavy.

Charles Thompson, representing Chris. Johnson & Co., Sheffield, Eng., and a general hardware line, is in town this week.

W. B. C.

REVELSTOKE, B.C.

January 23.—The staff of the Lawrence Hardware Company effected a clever capture of a smart crook who came in this week with cheques to be cashed. The gentleman in question made great play with a gun that he bought in the store, even going so far as to click the trigger in the face of a bank official. His subsequent suspicious manner in the store ended in a constable being quietly called, and the man was put in jail.—R.B.B.

WOMAN OIL PIONEER.

Mrs. Emma A. Summers is one of the pioneers in the oil industry of southern California. Oil, when first discovered near her home on California street, Los Angeles, became her constant study, and from the first Mrs. Summers apparently presaged its advancing worth and value as an economic agent. She invested her savings in an oil well, money she had made in teaching school, and began an exhaustive study of oil and its possibilities. Good fortune followed her efforts and with fortune and success followed public confidence in her judgment and business capacity. She became a marked woman and a conspicuous figure in industrial circles. Mrs. Summers next entered the manufacturing and mercantile field and established the Summers Paint Company, which soon built up an enormous trade. Her knowledge of oils and its by-products is remarkable, even in this age of the thorough and scientific knowledge of the subject. She is an excellent judge of oil sands and strata and is quite familiar with the configuration and outcroppings of oil lands. There is no branch of the marvelous industry with which she is not familiar.

Applications will be made by the Kettle River Valley Railway Company for incorporation to operate a line of railway from Midway to Penticton, B.C., a distance of about 120 miles, and from Penticton to Nicola, a distance of about 150 miles.

Care of Domestic Heating Apparatus

Suggestions Made by C. E. Oldacre Regarding the Management of House Heating Systems During Summer and Winter Months—A Subject of Live Interest at the Present Time.

No one subject receives much greater attention at the hands of the householder during the colder months of the year than does that of heating apparatus, and the results to be had in their use.

And right justly is this attention given, as to a great extent our bodily comfort is dependent on artificial heat during a considerable portion of the year. The more dependable the apparatus and the more responsive to our needs the greater is the comfort derived.

The greater proportion of our homes to-day are provided with some form of heating apparatus—warm air, steam, or hot water.

These methods of heating are to be found in many modified forms—warm air, and warm air and hot water combination, direct hot water, direct steam, direct-indirect steam, direct-indirect hot water, indirect steam and indirect hot water. Further, in some cases the indirect methods of hot water and steam may be combined with the direct—that is a portion of the house may be heated by the indirect method and a portion by the direct—all the radiators being connected with one central heater or boiler.

Merits of Different Systems.

No one system is necessarily the most applicable or the best method in all cases, but it follows of course, that whatever the method chosen, the better it is installed, the better the attention it receives, and the better the care it gets when out of use, the better are the results that are obtained and the more economical is the operation of the heating plant.

Without reference to any specific kind of apparatus or make of apparatus there are certain points that should be observed in the care and operation of heating apparatus to obtain reasonable results.

A heater or boiler consists essentially of an ashpit, fire box, combustion chamber, flue space, together with an air inlet, smoke outlet and grate or grates.

A chimney having a good draft is absolutely necessary to the proper operation of any heater. It should be, generally speaking, as straight as possible without offsets or bends, and be of a uniform size throughout. The minimum size should not be less than 9 inches by 9 inches for houses having up to 12 rooms in the average house, and may be 9 inches by 13 inches, or larger, in proportion to the size of the house for larger houses. There should be only two openings into the chimney, one near the base for the connection of the smoke pipe and one at the top, together with a clean-out opening at the base having a tightly-fitting cover. No chimney should have more than one stove, range, heater, boiler or fireplace connected to it—each being connected to a separate flue. A non-observance of this one condition is likely to be a very fruitful source of dissatisfaction and annoyance.

Chimney Often to Blame.

Many desirable patterns and forms of stoves, heaters and ranges have been condemned by their owners for no other reason than that the chimney was faulty in one or more details. A great many people for some reason or other seem to believe that a good draft is a part of the heating or cooking apparatus, but such is in no way the case, as everything is practically dependent on the chimney and nothing but the chimney. Regardless of whether the apparatus is otherwise satisfactory in its operation if the fire does not burn reasonably well it can at once be set down that it is no fault of the heater, stove or range, no matter how simple it may be in its construction, no matter how expensive or inexpensive it may be.

To many, a draft, good, bad or indifferent, is an inherent feature incorporated with every form of apparatus in which fuel is burned. But the form or type of construction usually to be found has little or nothing to do with the draft.

There is one class of difficulties met with by the man in the heating business that might well be spoken of here, and that is the case where a heating apparatus (and the same applies equally as well to stoves and ranges) is installed in an old house where wood has heretofore been the fuel used. In such places the chimney may be only one that is 4 inches by 8 inches and it has worked well with wood, but when an apparatus using coal is placed in position the draft is entirely unsatisfactory and consequently the results are poor. The trouble here is not only due to the size of the chimney, but it is likely that the chimney is in an outside wall and there are several openings into that chimney that have been used for small stoves. There is only one cure for such trouble and that is, have a proper chimney built that is to be used independently for the heating apparatus and there will be no further complaint on the score of poor draft.

A chimney that ensures a fair draft should be so built, that it is of full area throughout its entire course, has no communication with any other flue in any way, is carried higher than any nearby roof, and is not overhung by limbs of any surrounding trees. The chimney is the breathing-pipe for any stove, range, heater, furnace or boiler and it does not want to be choked permanently at any point—if it is, good results can not be had.

In general an observance of the following in the operation and care of heating apparatus may be found of value.

Building the Fire.

See that the smoke pipe is tightly connected to the chimney and is clear of dirt—that the tight damper is open, that is the damper that is usually placed in the smoke pipe—that any slide damper is pulled out that is in line with the direct draft—that all openings in the smoke pipe or chimney are closed including any check dampers. If there is a direct and indirect draft that the direct draft damper is wide open to the flue.

See that the grates are clear and operate freely. Put in plenty of dry kindling, paper first (or shavings) and small wood afterwards, then the larger pieces of wood or gas-house coke. Light the fire from the bottom and get a well lighted fire before adding coal. While starting fire with light fuel do not open the draft dampers located below the grates too wide as it is liable to cause smoke to be thrown out into the cellar. Throwing kerosene, or coal oil on the kindling is unnecessary and may be dangerous. Only add the coal after the fire has got well started and has had time to burn evenly all over the grate. If there seems to be a tendency to a sluggish draft place one or two goodly sized papers in base of flue and light so as to heat the chimney as it may be damp, and if necessary this may be repeated once or twice.

Maintaining the Fire.

After the fire is well started have the firepot well filled up to the bottom

of the feeder door—don't try operating with a shallow fire—there is no economy in trying to do so even if you might think that only a little coal in the firepot means little coal burned. Regulate the rate of consumption by the dampers. The greatest amount of fuel can be burned by having the draft damper below the grate open (or the ashpit door open) the revolving damper in the smoke pipe open, the check draft (or opening in smoke pipe) closed as also the feeder door and the least when the reverse is the case.

To lower the intensity of the fire—first close the draft doors below the line of the grates—then partly close the revolving damper in smoke pipe—then open the check damper that opens into the smoke pipe.

These successive steps will each reduce the rate of combustion and cause less heat to be given off by the apparatus.

Shaking the Grates.

In shaking or operating the grates always see that they are returned to their normal position. If of the revolving type always see that the upper part is flat and that the points do not extend up into the fire.

When shaking see that the revolving damper in smoke pipe is wide open and that the ash-pit door and slides in door are closed as is also the check damper.

Removal of Ashes.

It is a safe policy, to avoid warping and burning out of grates to remove all ashes from the ashpit each time the grates are shaken. All ashes should be removed not less than once a day from the ashpit. Non-observance of this is liable to cause the ashes to become banked up against the underneath side of the grates and cause damage. In ninety-nine cases out of a hundred this is the entire cause of trouble with grates, as the grates usually found are heavy enough to stand the usual wear and tear without any damage. See that back of ashpit is kept clear.

Special Care for Mild Weather.

Let the ashes accumulate on top of the grates so there may be a more or less depth of ashes on the grates according to the weather. Keep the fire line or coal supply up to the bottom of the feed door and don't try to operate with a shallow fire and with the feed door open. Keep the revolving damper in smoke pipe just sufficiently open to carry off all gas and check further with the check draft opening into the smoke when absolutely necessary. Do not shut off the revolving damper too much and at the same time open the check damper. The revolving damper (or slide damper) should have one or two openings of not less than a total area of 2 inches or if a slide damper is used then there should be a stop that prevents the slide from being entirely closed.

Special Care for Cold Weather.

The clearer the fire is kept at the bottom and the less the amount of ashes on the grates, the greater is the amount of heat that can be had. During cold weather the fire will need be shaken down twice a day and if severe weather prevails probably three times.

If the draft is a good one it will hardly be necessary to leave the draft doors below the grate line open for a period to exceed 15 or 20 minutes to get the new fuel properly caught up (or lighted.) Leaving the drafts turned on too long will most likely burn out the fuel too much, and temporarily over-heat the house and put the fire in such a condition that it will not carry over for a sufficient length of time. Keep the firepot full of coal up to bottom of feeder door.

Morning Care.

As of course during the night the fire has received no attention the fire may be pretty well burned out, particularly during cold or windy weather. First close the check draft, open the revolving damper wide and open the lower draft doors, and add two or three shovelfuls of coal or more, according to the size of heater, and allow the fire to burn up fairly well. Do not shake at first. This will quickly warm up the house and then after the breakfast hour is over shake the fire down according to the weather and add the fuel for the day, closing the revolving damper and opening the check damper (if necessary) as soon as fire is burning well. See that sufficient coal is added to fully fill the firepot up to the bottom of feeder door. Do not allow any direct damper to be open too long or the draft doors at bottom of furnace to be left open so long that the fire will burn out too much.

Evening Care.

Shake down the fire as late as convenient, according to the weather conditions and add coal to fill the firepot full to the bottom of feeder door. Don't open the lower draft doors unless really necessary and when the fire is fairly caught up close the revolving damper partly (more or less according to the intensity of the draft) and open the check damper which opens directly into the smoke pipe, setting this check damper more or less open as experience in each particular case can only teach you, and a fairly satisfactory temperature should be maintained throughout the night, and the fire should be in such condition in the morning that a good temperature should be had reasonably soon after the proper morning attention has been given the heater.

General Observances.

Don't burn paper, rubbish or garbage in your heater. See that the ashes are removed at least daily from the heater ashpit, both in mild weather and cold weather.

Grates are burned out and warped by letting the ashes accumulate in the ashpit.

Don't check your fire by opening the feeder door any more than absolutely necessary.

Don't open the feeder door wide open and close the revolving damper in the smoke pipe or open the check draft at the same time.

Don't think you have a good fire because it looks bright on the top, because there may be several inches of ashes between the fire and the grate.

If you want a clear fire be sure the fire is bright all over the bottom of the fire. A good look through the ashpit door will show you this.

Don't think the ashpit is clear of ashes because it has been swept in front—there may be more ashes at the back of ashpit.

When the feeder door is open for the purpose of adding new fuel, see that the turn or revolving damper is open and that the check draft is closed, and it is well to have the draft doors at the bottom closed as well.

Don't leave the feeder door open any longer than really necessary.

A slide damper with a stop preventing it being entirely closed, and a revolving damper with one or two holes having an area of not less than 2 inches serves the same purpose.

Don't shake the grates any more than really necessary in mild weather and in cold weather shake them often enough to get a clear fire two or three times a day.

Keep the firepot full up to the bottom of feed door to get best results at all times.

Take note of, and put in practice, the particular little attentions you may need give your heater to get the very best results.

Hot Air Furnaces.

Before lighting the fire see that all dampers in the heat pipes are open.

If heat is not wanted in upper rooms close the dampers partly in flues leading to such rooms after the fire is properly started.

Don't close all the registers or all the dampers in the heat pipes when a fire is in the furnace.

If any one pipe is slow in starting shut off the pipes at the furnace which

are attached to furnace close to this particular pipe for a few minutes.

Don't close off the fresh air duct leading from outside to the base of heater entirely, but see that it is properly regulated according to the velocity of the wind and the outside temperature. The damper in the fresh air duct may be closed partly at night during the cold weather, but should be wide open or nearly so during the day except during severe winds.

If your furnace has a dust damper don't leave it open if you want the fire to burn up.

Hot Water Heaters.

Before lighting the fire see that the system is filled with water—that is, that there is a half a gauge of water showing in the expansion tank.

Keep the pipes and radiators filled with water during the summer as well as during the winter.

During the heating season see that he tank shows water in the gauge glass.

Don't draw off water from the radiators or the boiler for domestic purposes.

Occasionally open the air vents to let off any accumulated air and as soon as water appears at the vent close it.

Try and keep a fairly uniform fire according to the weather.

Drawing the water off completely once or twice after the completion of a new heating plant is wise to get rid of all dirt and cuttings, but afterwards it is best to leave it filled, gradually adding water as required.

Have the heater well covered with asbestos plaster not less than 1¼ or 1½ inches thick. It saves the fuel.

Don't empty the system when a fire is in the heater, and do not fill it, if the system is empty, when a fire is in the boiler.

Keep the firepot full up to the bottom of feeder door to get best results.

Steam Boilers.

Before lighting the fire see that there is a half gauge of water showing in the gauge glass. See the gauge glass is clear and that the valves leading from boiler to gauge glass are open.

One or two pounds of steam as shown on the gauge is all that is necessary under ordinary conditions to get the proper results from a low pressure heating plant.

See that the chains leading to the check damper and draft damper are properly adjusted and in working order.

See that the safety valve on the boiler is in proper working order and that it is properly set.

All air valves should be properly adjusted so that as soon as steam is on the radiator, they will tightly close.

When the ordinary low pressure system is used all steam valves on radiators should be wide open if heat is desired and tightly closed if heat is not desired. Don't have them half open or half closed.

Have the boiler well covered with asbestos plaster not less than 1¼ or 1½ inches thick. It saves the fuel.

Summer Care of Apparatus.

As soon as fire is out take down the smoke pipe and clean out thoroughly and then put away in dry place till needed in the fall.

Clean out the heater thoroughly, removing all ashes, dirt and soot with wire or other suitable brush.

Don't leave off cleaning the heater till it is wanted in the fall. More wear is on the heater in the summer if it is left filled with the accumulated soot and dirt than there is in the winter when the heater is actually in use.

If your heater has been in use for some time and there are any worn or broken parts look the heater over and get the parts replaced as soon as possible. Don't put it off till the heater will be actually needed for the coming season.

Catalogues and Booklets

Manufacturers or jobbers sending printed matter for review, should draw attention to the new lines listed; and retailers sending for catalogues or other matter, should write on their regular printed letterhead and mention this paper to make clear that they are in the trade.

Shelby Steel Tubes.—An artistic souvenir is the booklet issued by the National Tube Co., Pittsburg giving a complete description of the modern method of making seamless steel tubing as practised at the Ellwood City plant. The book is copiously illustrated with special photogravures showing the different processes of manufacture. Commencing with an introductory paragraph devoted to the fact that brass and copper can be drawn into tubular shape while cold, and that now it is also possible by a recent process to do the same with steel, the story carries one through the historical era and on down to the actual process of manufacturing steel tubing from billets. This process is explained in detail as is also the making of tubes from plates.

"T-F" Door Sets. — The Taylor-Forbes Co., Guelph, have put out an attractive 12-page folder devoted to a description of one of their large variety of manufacture—"T-F" spring hinges and screen door sets. The various styles and sizes are set forth by tables and full size pictures as well as printed description. The springs in all the hinges are made from crucible steel wire, and the sets are boxed in convenient numbers. The catalogue is printed on coated paper and a blank page at the end makes a convenient memo. pad for jotting down some striking point.

THE 20TH CENTURY SKATE.

The Kennedy Skate Company, 2 South Franklin Street, Chicago, is offering the skate illustrated, for which they claim perfect rigid support for the ankle, easily adjusted fastenings and a blade curved to provide accurate balance in all positions. The lower part of the ankle brace is made of steel in one piece with the heel plate, and is attached to the upper cross braced part by rivet hinges. The ankle band, also of steel, is secured to the brace arms in a similar manner, allowing a free flexible forward and backward movement of the ankle while holding it firmly against side strain. The whole brace being

The 20th Century Skate.

made of cold rolled steel, stiffened with ribs, is both light and strong. A notable feature of the skate is that no key is required to fasten it to the shoe. The clamps being adjustable are set to fit the shoe, and pressure of the heel on the slanting heel plate forces the shoe forward, thus effecting a tight wedge fastening in a simple and convenient manner. Easily operated buckles of new design provided for the straps complete the means of attachment. The blades, it is claimed, are curved enough to turn easily, yet are flat enough to give substantial footing on the ice; the curve is more pronounced just in front of the ball of the foot. The skate is made in two styles, C and B, the difference being chiefly in the finish. Both are nickeled, style B being the more highly polished.

General Manager McLeod, of the C. N.R., stated that his company would at once commence the railway extensions into Alberta if the Government guarantee their bonds. C.N.R. surveyors are working out north on the line to Athabasca Landing and also west to the Pacific Coast. It is probable that the line will be extended to the Braziau coal fields this year.

CONDENSED OR "WANT" ADVERTISEMENTS.

AGENCIES WANTED

Manufacturers of hardware lines both at home and abroad watch our paper each week. If you want to secure the exclusive agency for any line for the whole Dominion, for a Province or for your own city or town you will find a Want Ad. will put you in touch with the right firm.

BUTTER TUBS—Manufacturers' agent in Winnipeg, excellent connection with jobbing trade, desires to represent manufacturer of wooden butter tubs. Box 1, HARDWARE AND METAL, Winnipeg. (6)

WE WANT TO SELL YOUR GOODS—Canadian and American established firms wanting resident selling agents for Canada write A. H. & R., Manufacturers Agents, 1757 Queen West, Toronto. (6)

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

AGENTS WANTED with good connection with hardware trade to handle a specialty which has had a good sale with hardware men and booksellers and stationers in the United States. The line has already been introduced to the bookseller trade in Canada, but separate agents are wanted for the hardware trade in Montreal, Toronto and Winnipeg. Apply, stating agencies you now have, to Box 779, HARDWARE AND METAL, Toronto. (6f)

ARTICLES FOR SALE.

Don't keep any fixtures or tools around your store for which you have no further use. They are worth more to-day than they will a year hence. Don't keep money tied up which you could use to secure discounts from your wholesaler.

FOR SALE—Set Tinners' Tools—complete, in good condition, break safe, etc; all good. Werner Bros., Mitchell. (8)

BUSINESS CHANCES.

Does your business need more money? Would you like to secure an active or silent partner? An outlay of 50c. or $1 for a small ad. under the heading, would probably put you in touch with the right man.

PATENT NOTICE—The owners of Canadian Patents Nos. 95125, 95126, 96650 and 102647, for improved processes for working silica glass and making articles out of fused silica, and for an improved furnace for working silica, are desirous of finding Canadian manufacturers who will take a license under their patents. The processes are being satisfactorily carried out in Great Britain and a considerable number of articles are being made and sold. Applications for licenses may be addressed either to THE THERMAL SYNDICATE, Ltd., of Neptune Bank, Wallsend-on-Tyne England, or to OWEN N. EVANS, Solicitor of Patents and Expert, Merchants' Bank Building, Montreal, Canada. (5)

BUSINESSES WANTED.

The business of your next door neighbor may be for sale, and you would not know anything about it. The only way to get replies from the trade everywhere, is to advertise in a paper which reaches the trade everywhere in Canada.

TO PURCHASE Established Hardware Business in live town or city in Ontario, east of Toronto; or in Quebec, west or south of Montreal. Box 787, HARDWARE AND METAL, Toronto. (8)

BUSINESSES FOR SALE.

Somewhere in Canada is a man who is looking for just such a proposition as you have to offer. Our "For Sale" department brings together buyer and seller, and enables them to do business although they may be thousands of miles apart.

HARDWARE BUSINESS FOR SALE in one of the finest farming sections of Ontario. Two railways. Stock about $4,500. Good reasons for selling. Address Box 782, HARDWARE AND METAL, Toronto. (11)

HARDWARE, tinware and furniture for sale.—Stock between five and six thousand. Doing a good business. Good reason for selling. Apply Box 781, HARDWARE AND METAL, Toronto. (7)

BUSINESSES FOR SALE.

Somewhere in Canada is a man who is looking for just such a proposition as you have to offer. Our "For Sale" department brings together buyer and seller, and enables them to do business although they may be thousands of miles apart.

HARDWARE, Stoves and Tinware Business for sale in a good manufacturing town, farming and dairying country, good business trade connections in store and workshop; stock about $8,000. Good reasons for selling. Address Box 784, HARDWARE AND METAL, Toronto. (8)

HARDWARE BUSINESS FOR SALE—In growing part of Toronto. Stock and fixtures about $2,000. Box789, HARDWARE AND METAL, Toronto (8)

WELL ESTABLISHED GENERAL HARDWARE BUSINESS in prosperous Manitoba town surrounded by excellent farming district. Stock about $8,000. A splendid opportunity. Apply Box 785, HARDWARE AND METAL, Toronto. (10)

Hardware Business For Sale

The old established hardware business of Reid & Wilson, at the town of Seaforth, being now in liquidation (the firm having been dissolved) the whole of the stock is offered for sale, together with coal warehouse and sheds.

The stock consists of:—

Blacksmith's iron, shoes, nails etc.
Wagon and buggy wooden ware

Dept. 287, NATIONAL SALESMEN'S TRAINING ASSOCIATION, Chicago, New York, Kansas City, Minneapolis, San Francisco.

WESTERN CANADA HARDWARE MARKETS

Corrected by telegraph up to 12 noon Friday, Room 511, Union Bank Bldg, Winnipeg.

Winnipeg, Jan. 27.—The annual meeting of the Grain Growers' Association, to which reference has already been made, was held during the past week and very ardently re-endorsed its previously expressed desire of Provincial Government Ownership of Interior Elevators. The promoters of the scheme seemed very confident of success, but while they were in session Premier Rutherford, of Alberta, spoke on the matter in the Alberta Legislature, in reply to a question, and stated that whereas it had been claimed that it would only require $4,000,000 to duplicate the present elevator system of Alberta, from evidence in his possession it looked as if it would be more like $15,000,000, and there were many other grave considerations to be taken into account before embarking upon such a scheme. He was not sure that under the British North America Act provinces had the power to engage in such business. His little speech was cautious but it did not take any great reading between the lines to see that the present Alberta Government is decidedly shy of the scheme. The Saskatchewan Government has already stated that only as an entire monopoly could the scheme be made practical and at this very convention the farmers themselves refused to give the Government a monopoly even if they erected the elevators, clinging to all the loading platform privileges they now have, but still maintaining that the governments should erect and maintain a costly system of elevators without any guarantee that the farmers would use them when they were erected.

The only province that has not yet been heard from is that of Manitoba and some decision in the matter was to have been handed out on the 22nd but did not materialize.

A Monster Problem.

The scheme is a gigantic one, and the Grain Growers' Associations, while they are clamoring for government owned interior elevators and publishing most misleading figures about costs, maintenance, profits, etc., have really no well formulated plan on which the thing could be operated—indeed they seem as if they expected the various governments to do that for them. There seems to be a general impression among grain men that the proposition will be turned down by all the provincial governments at the present time, and it is to be sincerely hoped they are correct.

The export trade of Canada is now on a very satisfactory basis, Old Country buyers are satisfied with the present inspection law and its operation and about the only effect of such a radical change would be a very general upset of the export trade.

Last year the fact that this question was pending had a great effect in deterring line elevators from erecting new houses, but this year up to date contracts are already under way for the erection and equipment of no less than 85 new houses, many of them on the line of the new G.T.P.

Dominion Charters Preferable.

The companies planning the erection of these houses are very reticent at present, but there is every reason to believe that the difficulty of provincially owned interior elevators will be gotten over by the companies securing Dominion charters and building their houses under those charters. Many men in the grain trade are coming to realize the absolute need of having Dominion charters for the carrying on of their business. In the first place, every grain dealer operates in at least four provinces and many of them in five provinces of the Dominion. Experience has taught them that while it is not very difficult for some body of agitators to secure the passage of drastic and often foolish legislation in a province, it is much more difficult for anything of the kind to be done by Dominion enactment and therefore the advantage of Dominion charters.

Business men in the east may think this interior elevator question a purely western one and confined to the grain trade, but once let the government start on the erection and operation of interior elevators and every business man in Canada will find the effect on trade generally. Instead of being a remedy for the present ills of the farmer it will bring about a condition of affairs that will make present troubles look rosy indeed.

Erecting New Elevator.

Fort William is to have another terminal elevator. This will be erected by the Western Elevator Company, of Winnipeg, who have a large line of houses throughout the West. The new house will be located 350 feet north of the present Consolidated Elevator on the banks of the Kamanistikwia River. It will have a capacity of 900,000 bushels and will be of the most modern construction. Work on this elevator will be started immediately.

Winnipeg is starting well in the building line for 1909, which promises to be a very active season. There is much to lend impetus to building this year. Prices of material are fairly reasonable, there is an abundance of lumber on hand, and a heavy cut this winter. The labor situation, although always a doubtful proposition until after May 1, looks rather healthier than it has done for some years. Lastly, the money market is encouraging, for not only can loans be negotiated on good propositions without trouble, but there is apparently a fair prospect of even cheaper money before the building season actually sets in. The architects of Winnipeg already have plans in hand for buildings that will aggregate $2,000,000, all to be erected in 1909. The Canada Permanent Mortgage Company are getting out plans for their splendid office building on Garry St. Several eastern factories are negotiating for sites and the coming of the Great Northern Railway into the city will necessitate the erection of their terminals on the property which they bought up two years ago on Ross Street and in that vicinity. It is quite probable that the station will be erected between the site of the old Princess Opera House, that was dear to the heart of old timers and was destroyed by fire some years ago, and the present city hall. This will bring it right into the business centre of Winnipeg on the west side of Main St. All the present railway terminals are on the east side of that street.

The Winnipeg Stock Yards.

Progress has been made in the matter of the Union Stock Yards to be located in St. Boniface. A trunk sewer was one of the first essentials in laying out the yards and the representatives of the three railway companies interested have filed with the council of the town of St. Boniface assurances of their intention to spend from $300,000 to $400,000 in the laying out and equipping of these yards. F. W. Peters, assistant to the second vice-president of the C.P.R., the chief engineer of the company, and the general superintendent are leaving for the south to make personal and detailed inspection of the stock yards at Chicago, Kansas City, St. Joseph, Omaha and South St. Paul.

The Live Stock Shippers' Association have received the assurance of Mr. Peters that the railway companies concerned are prepared to give to the city of Winnipeg every facility in connection with the construction of a public abbatoir that they would give to any private corporation. The city of Winnipeg will be given land upon the same terms, and will receive the same trackage and operating facilities that will be given to any private corporations.

The subject of a city owned abbatoir and market is quite a live one in Winnipeg at all times.

Hardware Markets.

As compared with last year, January hardware business is estimated by the wholesale houses as being from 25 to 40 per cent. greater. This is a satisfactory condition of affairs and indicates a bright outlook for 1909 business.

AXE HANDLES—Turned, s.g. hickory, $3.15 ; No. 1, $1.90 ; 2, $1.60 ; octagon, extra, $2.30 ; 1, $1.60.

AXES—Bench, 40 and 5 ; broad, 5½ to 7½ ; $21 per dozen ; 7¾ to 8¾, $23 per dozen; Royal Oak, per dozen, $6.25: Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25 ; Black Diamond, $9.25 ; Standard flint edge, $8.50; Copper King, $8.25 ; Columbian, $9.50 ; handled axes: North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75 ; Copper King, $10.50 per dozen.

AUGUR BITS—"Irwin" bits, 47½ ; other lines, 75 p.c.

BLOCKS—Steel, 35 ; wood, 60 p.c.

HINGES—Light T and strap, 65 p.c.

HOOKS — Brush, heavy, per doz., $8.75 ; grass, **$1.70.**

FILES—American, 75; Black Diamond, 60; Nicholson's, 65 p.c.

STOVE PIPES—6-inch, $9.25 ; 7-inch, $10.

BUILDERS' HARDWARE—50 p.c.

TINWARE, &c—Pressed, retinned, 70; plain, 75 and 2½ ; pieced, 25 ; japanned ware, 35 ; Famous enamelled ware, 50 ; Imperial, 50 and 10, one coat, 60 ; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; White, 70 and 5 ; Diamond, 50; Granite, 60 p,c.

GALVANIZED WARE—Pails, 37½ p.c. Other galvanized lines, 33 1-3 p.c.

SOLDER—21c per lb.

LANTERNS—Cold blast, per doz., $7; coppered, $9 ; dash, $9.

WRINGERS—Royal Canadian, $33; B.B., $40.75 per doz. Churns, 45 and 5.

ROPE—Sisal, 10¼c; pure manila, 13¼c; British manila, 11¼c. Lath yarn, 9¼c.

BUILDING PAPER — Sunrise, plain, 50c; Surprise, plain, 50c; Lion, plain, 55c; Anchor, plain, 60c; Cyclone, plain, 60c ; Victoria, plain, 70c ; Triumph, plain, 67½c; Buffalo, plain, 67½c; Jubilee, plain, 70c; Anchor, Joliette and Buffalo, tarred, 62½c ; Victoria and Jubilee, tarred, 86c ; Triumph and Joliette, tarred, 84c ; Cyclone, tarred, 78c ; Perfection, Sulphite, $3.75 per 100 lbs.

CORRUGATED IRON AND ROOFING, Etc.—Corrugated iron, 28 gauge, painted, $3; galvanized, $4.10; 26, $3.35 and $4.35. Pressed standing seamed roofing, 28, $3.45 and $4.45. Crimped roofing, 28, painted, $3.20 ; galvanized, $4.30; 26. $3.55 and $4.55.

AMMUNITION—Cartridges, rim fire, Canadian, 50; American, 33; pistol sizes, Canadian, 25; American, 5 ; military, Canadian, 20; American, 10 p.c. advance. Primers, $1.55. Loaded shells, English and Canadian makes, 12 gauge, black, soft, $18; 10, $22.50 ; 12 smokeless, chilled, English, $24 ; Canadian, $23 ; 10, smokeless, chilled, English, $28; Canadian, $27. Shot: Drop, per 100 lbs., $6.25 ; chilled, $6.60 ; buck, $6.95 ; 28 ball, $7.30. Powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

BAR IRON—Bar iron, $2.35; Swedish iron, $4.75, sleigh shoe steel, $2.75; spring steel, $3.25 ; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jessop. $13.

PIG LEAD—$5.50. Lead pipe. $7.

SHEET ZINC—Casks, $8 ; broken lots, $8.50.

COPPER—Planished copper, 29½c per pound ; tinned, 26½c.

IRON PIPE—Black pipe, ¼-in., $2.50; ⅜, $2.85; ½, $3.50; ¾, $4.65; 1, $6.60; 1¼, $9 ; 1½. $10.75 ; 2, $14.40 ; 2½, $24.40 ; 3, $31.50; 3½, $39.50; 4, $45 ; 4½, $52; 5, $58; 6, $75. Galvanized ; ¼-in., $3.50; ⅜, $3.80; ½, $4.25; ¾, $5.75; 1, $8.50; 1¼, $11.50; 1½, $13.90; 2, $18.50; 2½, $30.50.

FITTINGS—Wrought couplings, 55 ; nipples, 70; classified malleable fittings, 25 ; malleable bushings, 50 ; malleable unions, 55 p.c.

GALVANIZED IRON — Apollo, 16-gauge, $4.15; 18 and 20, $4.40 ; 22 and 24, $4.65; 26, $4.65; 28 $4.50; 30-gauge or 10¾-oz., $5.20 ; Queen's Head, 20, $4.60; 24 and 26, $4.90 ; 28. $5.15.

TIN PLATES—I.C. charcoal, 20x28, full box, $9.50; ½ box, $5; IX full box, $11.50; ½ box, $6; IXX, full box, $13.50; ½ box. $7.

TERNE PLATES—I.C. plates, $9.

CANADA PLATES—Half polish, 6 and 7 inch, $3.25; 8 inch, $3.50; full polish, 6 and 7 inch, $4 ; 8 inch, $4.25.

LUBRICATING OILS—600 W. cylinders 80c; Maple Leaf cylinder, $1 per gal.; 700 A. cylinder, 75c; Sterling cylinder, 55c; 600 A. cylinder, 50c ; Capital cylinder, 59 and 54c ; Solar red engine, 32c; Atlantic red engine, 29c; heavy castor, 29c; medium castor, 28c ; Ruddy harvester, 30c ; standard gas engine oil, 36c; Renown engine oil, 38c.

PETROLEUM AND GASOLINE—Silver Star, in bbls., per gal., 20c ; Sunlight, 22c; case, $2.45; Eocene, gal., 24c; case, $2.60; Penniline, gal., 25c; Silver Light, 22c ; Starlight, 20c ; Sterling Light, 24c. Engine gasoline, gal., 24c; f.o.b. Winnipeg, cases, $2.60.

PAINTS AND OILS — White lead, pure, $6.50 to $7.50, according to brand; bladder putty, in bbls., 2½c; in kegs, 2¾c: turpentine, bbl. lots, 65c. Linseed oil, raw, 66c; boiled oil, 3c per gallon advance on these prices.

EDMONTON MARKETS.

Jan. 29.—Barb wire, $4 per 100 lbs.; plain twist wire, $4.25 ; brt. wire staples, $4.20; poultry netting, 50 p.c.

FIELD FENCING.

Owing to the increasing demand for ready made fencing the Dominion Wire Manufacturing Co., of Montreal, have installed several looms for the manufacture of field fencing, and have issued this week an advance price sheet is concise form to be followed later by a general field fence catalogue, which will illustrate style of fence, lock, etc.

Their fence will be known as the "Dominion Special," and will be an all-Canadian product, manufactured in their own plant from the heavy rods to the finished fence.

It has been the practice of some fence manufacturers to dispose of their product through agents with allotted districts, but this company intend to give the hardware trade an opportunity to handle this line in conjunction with their other goods, believing it is the proper channel, and enables the trade to cater more extensively to mixed carload business.

The Dominion Wire Company are also increasing their facilities for the manufacture of all-galvanized wire products, including barb wire, coiled spring fencing and field fencing.

A 13-room church high school, to cost $25,000, will be erected at Raymond, Alta.

Vancouver ratepayers have voted $187,000 for school purposes. Several sites will be purchased and two new schools will go up this year.

Port Arthur is to have an entirely new collegiate building erected on the site where the present high school stands. Competitive plans are to be advertised for, so that the work can be commenced just as soon as possible.

Letters from the Sales Manager.

"The S.W. P."

Messrs. Barry & Butler,
Allentown, P. Q.

Gentlemen:-

Under separate cover I am sending you a copy of the last issue of ''The S.W.P.'', a monthly magazine which we publish in the interests of our agents.

''The S.W.P.'' is published expressly to keep the dealer in close touch with our business; to give him talking points on our goods; to help him sell paint and varnish; to give such suggestions as will help him increase the business of his whole store. We try to fill it with matter that is both interesting and valuable.

Your name has been added to ''The S.W.P.'' list, and from now on you will receive a copy of the magazine monthly. I hope you will make it a point to read each issue through carefully, then pass it along to your clerks and assistants and discuss the schemes and features proposed with a view of using them in your business.

Hoping that you will let me hear from you at any time we can be of service to you, I remain

Yours very truly,
C. C. BALLANTYNE.

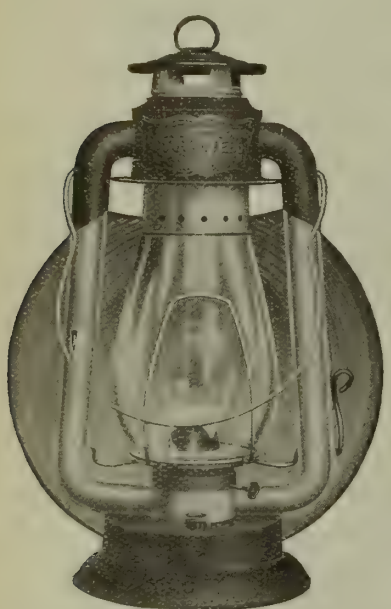
Novelties for the Hardwareman

THE LATEST IN LANTERNS

In nearly all types of lanterns more or less difficulty is experienced in putting out the light. The globe has to be raised or the light turned low and the lantern jerked up and down several times before the light is extinguished. But in the new X Ray Searchlight Lantern, manufactured by the Kemp Mfg. Co., Toronto, this bother is obviated, the lantern being fitted with a new extinguishing device. A sharp, quick blow of the breath through a small hole in the tube on one side of the lamp does the trick. This blow-out hole is shown in the accompanying illustration. The hole in no way affects the steadiness of the light given by the lantern, even in the most severe wind, as has been proved by actual tests. Another feature of this lantern is the reflector, and the makers guarantee the lantern to give as much light as any searchlight on the market at sixty per cent. greater distance away. The lantern is japanned in red, with a brass lacquered bowl. It has a spring attached to the back so that it can be used in the same way as the ordinary dash lantern, and an attachment for hanging up on a nail. The lantern is a cold blast one of standard

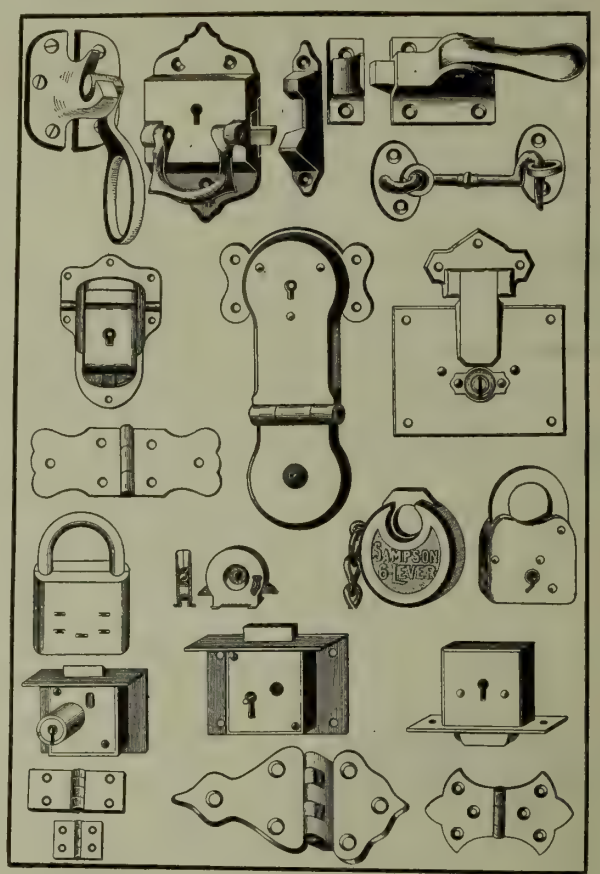


X-Ray Searchlight Lantern.

size and the fount holds sufficient oil to burn nineteen hours. It can be filled, lighted, regulated and extinguished without removing the globe, and a side lift attachment makes the removal of the parts an easy matter.

CANADIAN MADE PAD LOCKS.

Canada is becoming more and more independent of other countries in hardware, each year seeing the addition of new factories supplying lines which have had to be imported. One of the latest of hardware articles to be produced in this country is padlocks, this line being taken up by Brass and Steel Goods, Limited, Belleville, who have erected at Belleville a model factory building equipped with modern machinery. H. C. Hunt, the managing director, is well know amongst Canadian jobbers owing to his connection with the Belleville Hardware Company for the past six years. Besides padlocks the line of goods manufactured from cast, stamped and wrought brass and steel, include locks and hinges for trunks, cabinets, refrigerators, show cases, store fixtures, bath room, hose and yacht fixtures, and also brass and aluminum castings. These goods were not made to any appreciable extent in Canada before the organization of this company, fully 90 per cent. of them being imported from the United States. The accompanying illustration shows a variety and gives some idea of the lines made, but there are about 50 distinct articles of refrigerator hardware; 45 different styles and sizes of trunk locks and hinges ; about 15 varieties of padlocks, and a great many styles of cabinet locks now made by this young and energetic concern for the Canadian market. An illustrated catalogue issued by Brass and Steel Goods describes in detail some of the product.



Some Lines Made by Brass & Steel Goods, Limited, Belleville.

GENERAL BUILDING NOTES.

O. L. Robinson will put up an $6,000 residence at Winnipeg.

R. P. Powell will erect a block of dwellings at Toronto, to cost $20,000.

The Montreal M.A.A.A. contemplate the erection of a new clubhouse this season.

Winnipeg architects have plans in hand calling for the spending of $2,000,000 on buildings there this year.

The Imperial Bank of Canada will put up a substantial building at Cranbrook, B.C., in the spring.

At a meeting of the Hamilton Y.W.C.A. directors it was practically decided to erect a new $33,000 building. The board has $33,428 on hand.

Herbert E. Gates, Halifax, is preparing plans for a large brick and stone addition to the building of the Ladies of the Sacred Heart.

It is stated that a four storey hotel building, electric lighted, steam heated and with a private waterworks and sewerage system, will be constructed at Elk City, Ont., immediately.

The C.P.R. estimates provide for the erection of a large addition to the C. P.R. depot in Vancouver, B.C. The plans call for an addition practically as large as the present building.

Offices for the Great West Life Assurance Co., the Canada Permanent Co., the Eastern Townships Bank; two hotels and several factories, are new buildings proposed for Winnipeg this spring.

Last week's building permits in Toronto totalled $60,000.

IVER JOHNSON
SAFETY AUTOMATIC REVOLVER

Different from every other revolver, and infinitely superior to near-safe imitations, because the feature that makes it possible to

Hammer the Hammer

in perfect safety, is not a mere device added to the revolver, but is itself a part of the firing mechanism. No buttons to press, no catches to set, no levers to pull. The hammer of an Iver Johnson Automatic Safety Revolver *never* touches the firing pin, and the firing pin *never* touches the cartridge until the trigger is pulled. You can "hammer the hammer," drop it, kick it, pound it, but until you pull the trigger, there's "nothing doing."

ACCIDENTAL DISCHARGE IMPOSSIBLE

Hammer the Hammer — Accidental Discharge Impossible

ADVERTISED in all the leading Magazines and Sportsmens' periodicals. Our advertising creates the demand. But we never sell direct where the dealer can supply.

These are not premium goods. The owl's head on the grip and our name on the barrel guarantee them.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal waterworks and sewerage systems, railway or mining news, etc.

Industrial Development.

J. C. Felger will erect a $35,000 bushel elevator at Calgary.

The Carnegie Milling Co. are erecting a saw mill at Port Perry.

The Seeley M'fg. Company will erect a $15,000 factory at Windsor.

T. R. Brigham, Vancouver, will erect a large saw mill at Port Essington, B.C.

The McMaster Lumber Co., Kemptville, Ont., will erect a large saw mill at Hull.

The Empress Mfg. Co. will erect a $20,000 addition to its plant at Vancouver.

The International Harvester Co. will erect a $40,000 four-storey warehouse at Calgary.

Work has commenced on the construction of the new C.P.R. sheds at Vancouver.

The Scotia Fire Brick Co. will establish a plant for making fire brick at Sydney, C.B.

A number of big lumber mills will be built on Fraser River, B.C., during the next three years.

During 1907, 321 mining companies capitalized at $319,876,000, were incorporated in Ontario.

The North American Bent Chair Co. are making extensive additions to their buildings at Owen Sound.

The C.P.R., C.N.R. and G.T.P. will expend $395,000 this year on the new stock yards at St. Boniface.

The McGillivray Creek Coal and Coke Co. will instal a $200,000 plant on its property at Coleman. Alta.

The Grand Trunk Railway are stated to be preparing plans for the erection of several concrete elevators along their system.

The Alberta Clay Products Co. will erect a factory for the manufacture of sewer pipe at Medicine Hat almost immediately.

The mines at Cobalt are again showing signs of activity. A great deal of machinery is being installed in many of the mines.

The Maritime Mfg. Co., whose premises were destroyed a year ago at Pugwash, N.S., will begin operations again at Halifax.

It is reported that the T. & N. O. Railway Commission has decided to erect a car repair shop and a pipe-casting shed at North Bay.

The Stave Lake Power company will this year spend between $500,000 and $600,000 in construction on their works on the Stave river near Vancouver.

The Victoriaville Furniture Company have had to run overtime three days per week to keep up with orders. They have just added a two-storey wing, and are installing additional machinery.

Rossland mines during 1908 produced 304,334 tons of ore. Estimating this at $12 a ton the output was worth $3,652,008. To date these mines have produced $43,951,430 worth of ore.

A factory for the manufacture of Stirling Boiler Injectors for marine, locomotive and stationary boiler purposes, the invention of W. H. Stirling, St. John, may be started at that place.

The Fernie Lumber Company's new mill to replace the one destroyed in the recent conflagration, is now in operation, and is cutting and shipping lumber. The entire plant is not yet completed, but it will have a capacity of between 50,000 and 60,000 feet per day.

A report is current in Owen Sound that W. P. Telford, is endeavoring to interest a large American ship-building concern in a project for the erection of a modern dock there. The undertaking would include the erection of a large shipbuilding plant. The total cost has been estimated at $500,000.

Delahey Bros., Pembroke, Ont., proprietors of the National Manufacturing Company, which was recently burned out, have taken over the plant of the Cossitt Company, makers of agricultural implements, Brockville, and will make large extensions to the factory.

The Tudhope-McIntyre Company, a combination of the Tudhope Carriage Company, Orillia, and W. H. McIntyre, president of the W. H. Kiblinger Company, Auburn, Ind., who make a specialty of high-wheel motor carriages will manufacture this line of goods extensively in Orillia during the coming season.

The Silliker Car Works, Halifax, N. S., held their second general meeting recently, and the statement showed net earnings of $13,800. This was considered quite satisfactory in view of the general depression, and of the fact that the works have only been recently started.

The Western Elevator Company, represented by Mr. Read, late President of the Consolidated Elevator Company, has asked Fort William for exemption from taxation for a period of ten years on an elevator they intend to construct there early this year. The request was granted, and a by-law will be submitted to the ratepayers.

The Sanderson-Harold Company of Paris, Ont., have a number of hands employed in the Plow Company works getting things in shape for the re-starting of the works. The office staff have taken up their quarters in the market building, which is also undergoing slight renovations to suit the needs of the various departments of the company.

Municipal Undertakings.

Winnipeg will start work at once upon the construction of a $65,000 sewer.

Victoria has secured $1,200,000 with which to instal a new water system.

J. H. Taylor, City Clerk, states that a vote on the question of constructing water works will soon be taken at Weston, Ont.

Plans will be prepared by City Engineer Ruttan for the construction at Winnipeg of a trunk sewer for the district west of the Red river.

The tender of Bissett & Louchs for the supply of 543 tons of water pipe at $38.59½ a ton has been accepted by the Winnipeg Board of Control.

Work is to be commenced at once on a system of waterworks at Clinton, Ont. An engineer will shortly be appointed and contracts awarded.

Tenders will probably be received about April 1 for the proposed septic tanks for city sewage at St. Thomas, for which the citizens on Jan. 4 voted to issue $40,000 bonds.

Tenders for the supply of brass work, galvanized iron pipe and lead pipe, required by Vancouver for the year 1909, will be received until February 10, by W. McQueen, City Clerk.

Toronto City Engineer has recommened extensions of water mains on Colma Ave., Dupont Street and Lucas Street and Binscarth Road, and has recommended that a sewer be laid on Grace Street, from 1,870 feet north of College to 400 feet south of Bloor, at a cost of $1,900.

One of the schemes that the Toronto Board of Control will consider the early part of this year is the construction of a system of overflow sewers for the city, and City Engineer Rust has been instructed by the controllers to prepare a report. It is estimated that the cost of the work will be in the neighborhood of three-quarters of a million dollars.

Tenders addressed to Joseph Oliver, Chairman, Board of Control, Toronto, will be received until February 2 for the construction of section No. 3 of the high level intercepting sewer, tenders to be alternative for brick and concrete. The work required is as follows:—1,972 lineal feet of 7 foot 6 inch circular sewer; 2,419 lineal feet of 7 ft. 9 in. circular sewer; 1,556 lineal feet of 8 ft. circular sewer; 439 lineal feet of 8 foot 6 inch circular sewer; together with manholes, connections, etc.

News of the Paint Trade

HOW TO TEST A MIXED PAINT.

In reply to the question, "How would you test a ready mixed paint in order to ascertain its durability, its power to resist weather and wear and tear, and its general suitability for any particular class of work? the London Decorators' and Painters' Magazine replies as follows :

The question does not state the class or kind of ready-made paint. All enamels, flat enamels and water paints come under this general description, as well as all made greens, browns, blacks and blues that are sold ground ready for thinning out. The only exceptions would be white lead and other simple and unmixed pigments, such as umber, ochre, etc.

But assuming that the popular ready-mixed paint is in question and that we know nothing of its composition or history, I should proceed as follows :

Open and thoroughly stir the paint, and paint two pieces of glass, say eight inches by six inches, half way over with the paint, giving a full ordinary coat and standing each in a vertical position, one outside and one inside. On observing it against the light I should know whether its covering power was good or bad. On looking at its surface half an hour after painting I should be able to judge of its fineness or freedom from grit. On noting whether it ran down the glass, showed signs of separation from the oil or shifted its position, I should be able to judge of the quality of the oil used and of its suitability as a paint oil.

I should next look at it with a strong magnifying glass and see whether the magnified paint looked homogeneous or well and intimately mixed. If it did not, I should know that it would not be a stable or lasting paint, as the molecules would undergo change and movement leading to cracking or crinkling.

I should next note the time it took to dry, and the character of the skin formed, noting whether it dried from the bottom or skinned over at the top only, and testing the skin to see how leathery and tough it was.

From these various indications I could assess its general value and suitability for any given purpose, as I should compare its behavior with what I should expect in a well-made sample of white lead paint under similar conditions. There would be no need for a practical painter to put it to any long test of time or to analyse it.

Better Varnish

THERE is no good reason why your store should not do the biggest varnish business in town. It will come to you of itself if you stock the varnish that perfectly satisfies people who know varnish. Those people don't take long to find out the quality there is in every brushful of

Elastilite Varnish

The varnish that makes good, indoors or out. Comes in tins only—half-pint to gallon sizes. Made solely by

HORSE NAILS

That "M.R.M." Horse Nails are giving satisfaction is proved by the fact that our sales last year were double those of the previous one.

The best farriers of the country recognize that "M.R.M." brand Nail fully meets the demands made upon it, as far as quality is concerned, and can be bought at a reasonable price.

A stock of these Nails is essential in the up-to-date Hardware Store.

The Montreal Rolling Mills Co.

Paint and Oil Markets

MONTREAL.

Montreal, Jan. 29.—Very satisfactory trade is being done in varnishes, colors, and paints generally. Liberal spring orders have been secured, and are piling up waiting later shipment. To relieve the probable congestion manufacturers are pleased to get specifications calling for immediate delivery. Prices are unchanged, and there is a good deal of strength to the markets caused by the satisfactory trade, and the promise of a fine spring movement.

TURPENTINE—Supplies are coming forward with regularity, and the market is firm and unchanged. Inquiries continue of an encouraging nature. We continue to quote 58c for single barrels.

LINSEED OIL—While it cannot be said that complete harmony reigns with the trade in connection with the prices of linseed oil, quotations issued seem to be pretty universally adhered to. The demand is on the light side with a tendency to improve. We quote: Raw, 1 to 4 barrels, 59c; 5 to 9 barrels, 58c; boiled, 1 to 4 barrels, 62c; 5 to 9 barrels, 61c.

GROUND WHITE LEAD—There seems to be less anxiety to push sales in view of the fact that orders are coming in very satisfactorily. The accumulation of stocks has ceased and the market is stronger in consequence. We quote:—Strictly pure, $5.50 to $6, according to brand, and No. 1, $5 to $5.50 f.o.b. Montreal.

RED LEAD—This article seems to have fallen into a rut, and the demand continues sluggish. There is no change in prices and we quote: Genuine red lead, in casks, $4.50; in 100-lb. kegs, $5, in less quantities, at $6 per 100 lbs.; No. 1 red lead, casks, $4; kegs, $4.50, and smaller quantities, $5.50.

COLORS—Ready mixed paints seem to form the bulk of paint shipments. Small tins of fancy household enamels and other domestic lines are in good demand.

PARIS GREEN—Manufacturers are busy shipping, and it is thought that the market in many localities is very bare. Prices are well maintained, and we quote: 1-lb packets, 100 lbs. in case, 21c 1-lb packets, 50 lbs. in case, 21½c; ½-lb. packets, 100 lbs. in case, 23c; 1-lb. tins, 100 lbs. in case, 22c.

WHITE ZINC—This line is very quiet, and without feature. We quote: Dry V.M. Red Seal, 7½c; Red Seal, 7c; French V.M., 6c; Lehigh, 5c; white zinc, ground in oil, pure, 8½c, No. 1, 7c; No. 2, 5¾c.

PUTTY—Putty is quieter than usual. While a fair number of orders are being received they are extremely light. We quote: Standard putty, 880-lb. casks, $1.65; in 100-lb drums, $1.90; bladder putty, 400 lbs., in barrels, $1.90; in 100-lb. cases, $2.05; in 25-lb. drums, $2; 25-lb. tins, $2.05; 12½-lb. tins, $2.25, f.o.b. Montreal.

TORONTO.

Practically no change has come over the market during the past week. Prices are at the same figures and orders are for about the same quantities, though inquiries are more numerous than was the case a week ago. The feeling of better times near at hand is more prevalent and jobbers, painters and hardwaremen speak very hopefully. It is usual to revise price lists somewhat at the beginning of each year and this has been done this season. There are no radical changes, however. Chemicals are slightly lower compared with a year ago, litharge and sugar of lead being easier. Whiting is ten cents dearer than this time last year; plaster of Paris is up five cents, and pine tar is down ten cents a dozen. Rosins, too, have advanced.

LINSEED OIL—There is no change in the price of oil at the present time, although flaxseed in the United States is up to a higher price than has been for some years past and if the Canadian crushers had to procure new seed now they would have to make a higher price for their oil. Quotations are: 1 to 4 barrels, 59c for raw, and 62c for boiled; and 5 to 9 barrels, 58c to 61c.

TURPENTINE—As regards turpentine there has been a stiffening of price in the Southern States, but no further advance has taken place locally. Quotations are still at the figures of a week ago: Single barrels, 60c; 2 to 4 barrels, 59c; and 5-gal. lots, 65c.

GROUND WHITE LEAD—No, 1 is at $5.40 to $5.65, pure white from $5.80 to $6, and a superior line is at $6.25. Genuine red lead is at $4.50 in casks and $4.75 to $4.80 in 100 lbs. Orders are fair.

STAINS AND VARNISHES — The market for common rosins has advanced about 25 cents per barrel recently, which must affect common varnish to some extent. Whether this will affect trading for present needs remains to be seen. As yet no advance has taken place locally.

PARIS GREEN—Still steady is this line. Prices are firm and at the same figures as last week. Barrels of 600 lbs. are at 19½c.

GLASS AND PUTTY — Continued firmness is noted in these lines and prices remain unchanged.

PETROLEUM—Prime white, 13½c; water white, 15½c; Pratt's astral, 17½c; are still the quotations with good business being done.

PAINT A NECESSITY.

In pushing paint sales there is one fact which dealers should always impress upon customers, and that is that painting is a necessity and not a luxury. Not only is this true as regards the exterior of a house, but the interior as well. The merchant should go further than the question of appearance. He should dilate upon the economic and hygienic side of painting. To the property owner the strongest selling point can be made of the fact that a well painted house is protected against deterioration.

The salesman should point out that it is not economy but extravagance to put off painting even for a year. The damage done by the weather upon the woodwork not only spoils the surface, but so weakens the material that it is less able to bear the internal stresses of the structure. The damage done by the procrastination is much more than the entire cost of the painting. Thus

You can shake hands with your customers, look them in the eyes, and talk to them face to face about

"English" Liquid Paint

There is nothing secret, mysterious, or unknown about it—nothing you have to hide—nothing you have "to talk-around," nothing you yourself do not know.

You can tell your customers frankly and honestly all about the paint.

You can tell them what is in the paint, showing them the guarantee formula on the can.

You are sure you are giving your customers the highest grade of paint—pure paint — satisfaction and economy, when you give them

"English" Liquid Paint

And it is profitable—very profitable to handle.

Write us to-day for prices and selling plans.

Let Us Set Him To Thinking.

All that some people need to influence them to action is something to make them think. Lots of people could be secured as your customers if they were reminded in a tactful way that their premises could be improved by the application of the painter's brush.

Have you ever taken notice, Mr. Dealer, of how many buildings in your territory really need painting and the owners of these places seem to be utterly oblivious of the fact? We have a plan for arousing interest on this subject in the minds of the people who would make good customers.

This plan of co-operation has proved a success with Martin-Senour paint dealers, and we would like to co-operate with you in the same way for the advancement of your paint trade. We'll do it if you will get in touch with us. What do you say? Send us your name and address on a postal and let us talk it over.

The MARTIN-SENOUR CO., LTD.

Pioneers of Pure Paint

MONTREAL **CHICAGO**

The Winnipeg Paint & Glass Co., Ltd., Winnipeg

The Maritime Paint & Varnish Co., Ltd. Halifax, N. S.

the value of the house is depreciated in the eyes of a prospective buyer, and the owner is ruining what was probably a good investment. By preserving the exterior from the wear and tear of the elements the house is given an insurance policy that is worth more than a fire one.

Then comes the question of interior painting. Impress upon customers that painting is essential for sanitary reasons. Paint is a disinfectant, and therefore cannot be too freely applied. A continual freshness that is extremely healthy is imparted to kitchens and cellars, cupboards and other dark places by paint. There is little chance for germs to lurk in corners where the paint brush has been applied frequently and with vigor. The paint tin should be in frequent use in every household, not only at every spring and fall, but at all times. The paint pot is a home necessity and a preventative against doctor's bills.

PAINT SALESMANSHIP.

It is a debatable point whether a merchant pays sufficient attention to the paint salesmanship of his clerks. He may himself be thoroughly posted in the various selling points of his lines, and fully conversant with the best methods of attracting the interests of a customer, but does he make certain that his clerks are as well informed.

The merchant knows that paint is not like the staple articles of hardware such as nails, screws, etc., that require no selling arguments. A consumer has no uncertainty in buying nails. He knows the ones he wants, and gets them. With paint he is very often perplexed. He is uncertain as to the color that would suit his purpose best; he may be doubtful as to whether the paint before him is really the best that can be procured. He wants the strong arguments of a well-informed salesman to convince him. Has the clerk been instructed in those points? If not, the merchant should lose no time in seeing that the omission is rectified.

Paint selling to be most successful requires a familiarity with the product, its composition and method of manufacture, and also a knowledge of the best color to suit any peculiar circumstances that may attend the painting. a knowledge of the best brush to use, and sound advice on applying the paint to its best advantage are all selling points that the merchant should see were thoroughly instilled into his clerks. His time cannot be more profitably spent than in educating his staff in paint salesmanship. A convincing argument clinches a sale where the absence of one would lose it.

Most consumers are far from being paint experts. They see a house, barn, or railing looking pretty in a fresh coat of paint, but while they want their own property to look equally well, they are not quite certain that a similar color would suit their case. If a clerk is well informed on the color points of his paints, he can help the customer over a difficulty, and effect a sale.

Another strong point is to see that the clerk is perfectly familiar with the different brands and specialties carried in stock and also write the price of each article. It is annoying to a customer to have to wait while the clerk is running round the store trying to find someone who will tell him if an article is in stock, and what the price of it may be. This lack of knowledge is apt to destroy the confidence of the customer in the store, and possibly in the article itself. By attending to the points of paint salesmanship, the merchant does not only increase business, but better satisfied customers, which in itself means more business. A merchant cannot employ his time, valuable as it may be, in a better way than by instructing his clerks on the various selling points which we have here enumerated.

GOOD MIXED PAINT TALKS.

The paint department does not get a fair show where the merchant waits for people to come in and ask for paints.

Talk paints to the people, all of them.

Suggest paints through the newspaper ad. in the window display, in the way the stock is kept, in talks to the customers, and in talks to people anywhere.

A wagon pulls up to the store and you see it needs painting. How much paint would be required to put it into good shape. What will be the cost? How much will that expenditure add to the life of the wagon as well as to its looks?

That kind of talk interests the farmer.

You know that a certain farmer or may be a town resident is doing some repairing and may want paint. A circular mailed to him at the right time may make a sale.

Houses that need painting. How many are there and who owns them? Another place for advertising matter.

Paint, good paint, the kind you ought to sell, the kind advertised in this paper is the best investment the property owner can make. It saves expensive repairs in other directions. That should be the talk in your advertising. And by the way use the circular letter occasionally. A mimeograph is a handy thing in a store and a mimeograph letter that talks right usually makes an impression.

Have you a "prospect" book containing the names of people who will be in the market for paints at some future time?

Reference to such a list helps. It makes sales possible where otherwise there might be nothing doing.

LACQUERET

Gives New Life to Old and Worn Woodwork

WHAT IT IS

Lacqueret is a translucent lacquer made with soluble permanent colors combined with a lustrous, elastic, hard-drying liquid. It possesses individual and exquisite color richness, wears well, is easily applied and, being non-porous, is thoroughly sanitary.

WHAT IT DOES

It is designed for beautifying and preserving old furniture, marred and soiled woodwork, dingy and dirt stained floors. It restores old and worn wood surfaces to their pristine tone and tint and thoroughly obliterates the frays and sears of usage and abuse.

Write for the details of Special Selling Plan.

STUNG AGAIN

BOUGHT A WHITING AND GLUE WALL FINISH WHEN WARNED IT WOULD BE A STICKER

"Sticking" on the shelves of a good many hardware stores is to be found the ordinary whiting-and-glue wall coating disguised in packages bearing a fancy name. Your customers don't want this "old time" covering. You only waste your efforts in trying to sell it in place of "Alabastine"—the gypsum-rock cement finish that has made Kalsomine a back number. Don't get stung again. Buy Alabastine—more used in Canada than all other wall coatings, combined. Write for samples and color cards.

You May Become a Practical Window Dresser for $2.50

This is the first book ever written devoted exclusively to Hardware Display, and has been off the press only a few weeks. It is a practical, up-to-date collection of ideas of the most expert window dressers in the world. There are hundreds of displays in the book that can be put in at practically no expense—anyone of them will bring enough extra trade to the store to pay for the book many times.

256 Pages **8x11 Inches** **300 Illustrations**

Price $2.50. (Payable in Advance)

Better than Imported Machines

Taylor-Forbes Lawn Mowers are stronger in every respect than imported machines. Their general all-round superiority is indisputably demonstrated by these facts:

All our machines are self-sharpening—cross bars, girts and shafts being double the weight and strength of any imported machine. Steel plates for cylinders and knife-backs in all our machines are double the thickness of any imported machine All cylinder wings are made of malleable iron—cast iron is used in imported machines. All Taylor-Forbes machines are made with loose half-boxes and permit of quick and easy adjustment, while American machines, being made solid, cannot be adjusted. All wheels on our machines are three times the weight of any imported machine. The highly carbonized flat steel pawls on our machines are vastly superior to the little wrought iron pins used on imported machines

CARBORUNDUM

Carborundum is admitted to be with the exception of the diamond the hardest substance made and cuts all other abrasives with ease. The crystals are hexagonal in shape and possess a sharpness superior to all other cutting materials.

It is infusible at the highest and insoluble in any of the ordinary solvents.

Carborundum products embrace:—

Crystals
Grains
Powders
Wheels
Cup Wheels
Sharpening
Razor Hones
Combination Stones
Dental Wheels
Axe and Scythe Stones
Oil Stones
Rubbing Stones
Scouring Stones
Slip Stones

In fact every form in which abrasives can be used it has no equal.

PARIS GREEN

For the next few weeks watch this page weekly for pointers in Spring Buying

Among Painters in England the name of "BLUNDELL SPENCE & COMPANY" LIMITED, is better known than that of any paint or varnish manufacturer in the United Kingdom. They have not been making "PARIS GREEN" as long as some other houses, but the quality of their goods is equal, if not better than anything sold on this continent.

We distributed about 100 tons during 1908. This was shipped from Halifax to Vancouver.

In the Annual Report made by the Government, it shows that they tested more than 25 samples.

In every case the results of the tests read

"Absolutely Pure"

So that anything we would add here would be superfluous.

We can supply it in all size packages from arsenic kegs (600 lbs.) down to 1/2 lb. paste board cartoons, the 1/2 and 1 lbs. being very clean and attractive.

See our travellers or write for quotations, and when doing so state the largest amount you will buy.

White Frost Refrigerators

The handsomest, the best and the ONE Refrigerator that is absolutely sanitary.

The Refrigerator that has set the people wild in its praise and it "delivers the goods."

Made Entirely of Metal—not a splinter of wood in its construction. It cannot warp, swell or decay—will last a lifetime.

Absolutely Sanitary. No nasty corners, cracks or crevices for germs and dirt to gather. All food is preserved sweet and wholesome — without taint or odor — The "White Frost" is the protector and defender of the family health.

Round in Shape with revolving and quickly removable shelves, it can be thoroughly cleaned in a few minutes and kept clean.

Economical of Ice. Refrigeration is on natural and scientific lines. Guaranteed to maintain an equable, cool, dry temperature in the hottest weather.

Enamelled in Pure White without and within. Trimmings of solid brass, perfect lock, ball-bearing castors. A handsome piece of furniture that at once attracts the housewife.

A satisfactory record of five years demonstrates why the dealer who sells the "WHITE FROST" always has the Refrigerator trade of his city.

The demand is big. Get orders to us promptly. Catalogue on request, send for it to-day.

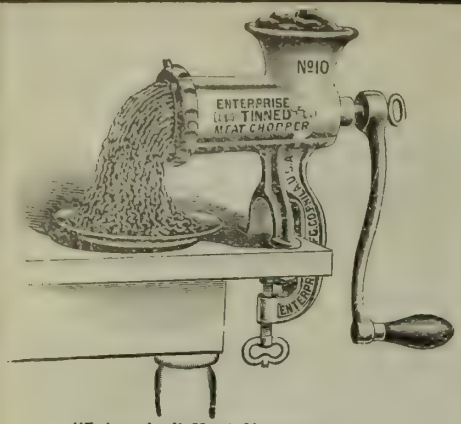
LOOK OUT!

¶ Live business men should always be on the look-out for new lines which are going to take on, because by not carrying them they lose trade and reputation.

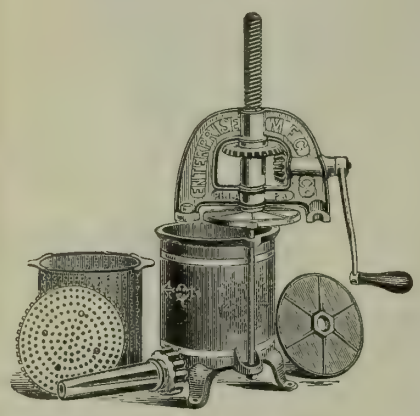
¶ We recommend them, therefore, to be quickly on the trail of our new No. 23 Handsaw, which has already met with great favour, partly because men wanted a straight back to compare in quality with our 87 and 87A, and partly because we have hit on a mighty good thing in our new alloy saw steel.

¶ There's "just a little something" in it which makes the difference your customers will notice.

SPEAR & JACKSON, LTD., SHEFFIELD.



"Enterprise" Meat Choppers and



'Enterprise" Sausage Stuffers and Lard Presses

DRIVE THESE TANDEM!

Every user of an **"Enterprise" Sausage Stuffer and Lard Press** needs an **"Enterprise" Meat Chopper.** Sell them together. Push them together. Drive them "tandem."

Every dealer and almost every buyer, knows the superiority of genuine "Enterprise" Choppers.

Lest you forget we remind you of these points about the **"Enterprise" Sausage Stuffer and Lard Press :**

Accurately-bored cylinder. Lips on the inner tin cylinder to make easy its handling when heated. No hot iron cylinder to handle when pressing lard. A patent latch which prevents breaking of plates. Patent corrugated spout prevents air entering the casing thus assuring preservation of sausage.

Write for catalogue describing, illustrating and listing these and other "Enterprise" specialties. Get our advertising aids for dealers.

Why It Pays

It pays to sell Genasco Ready Roofing because—

1. We have created a brisk demand by our continuous campaign of national publicity.
2. The quality of Genasco backs up our advertising statements and doesn't disappoint customers.
3. Genasco is made of Trinidad Lake asphalt, which is bound to give it lasting life.
4. We tell the people what Genasco is made of. They want to know what they pay for—and they have a right to know.
5. Genasco makes satisfied customers and repeat orders, and with a little effort on your part, means bigger business and increased profits for you. Mineral and smooth surface roofing. Backed by a thirty-two-million-dollar guarantee.

Write for samples and full information.

Ready Roofing

Are You Using Your Effort in Profitable Metal Roofing Business?

Some Hardwaremen have lost interest in this lucrative business and no longer give it the attention that it deserves.

They have become discouraged by the continual unbusinesslike and underhand dealings of certain manufacturers and instead of denouncing *them* and their products they have "thrown up the sponge."

They wouldn't do this in their stove business or their cutlery, or their paints, or any other profitable line belonging to the Hardware Trade. They would transfer their business to a firm with a reputation for fair and honest dealing and continue right along to make money.

Are you one of these men? Are you still neglecting this business or pursuing it in a half-hearted way because you think you can't meet unscrupulous competition?

Take our advice, *don't try to meet it.* Ignore it. If you are selling "Galt" Goods, you really haven't any competition. Competitors may slash prices, misrepresent their goods and use every underhand method of soliciting business, but they can't injure your business BECAUSE THEY CANNOT SUPPLY "GALT" GOODS.

"Galt" Shingles, "Classik" Ceilings, etc., sell on their intrinsic qualities—the *perfection* of their *designs and constructions*—not on the age of their makers or the cheap manner in which they can be produced.

If there are houses and barns being built or repaired in your vicinity this spring (if there are not you had better pull down the curtain and move out); if there are prospects for Roofing, Siding, Ceiling, etc., and you are willing to give "Galt" goods a show on these jobs drop us a card to-day for Catalogs and particulars of our "1909 Dealers' Proposition." We'll tell you how to bring this business in your locality back to a healthy, sane, profitable basis and help you to do it. This information costs you one cent. Do you want it?

The barrel is bronze, rifled and steel jacketed, finished in blue black gun finish. Breaks down for loading and ejecting shells. Flat stock and forearm of gun of gum wood. A beautiful model, symmetrical and well balanced. Barrel is 16 inches long, length of rifle over all, 30 inches. **Price $2.00.**

MODEL No. 027 is exactly like No. 27, except the stock and forearm, which are of genuine walnut, turned and beautifully finished. **Price $2.25.**

Other models are Nos. 15 at $2.00, 19 at $2.50 and 23 at $3.50, each a winner in its class.

Our continuous advertising in the boys' papers will bring the business to you, as every boy will want one and you should have a stock on hand. **Write for catalogue and net trade prices.**

Something Different

The Dillon Hinge-Stay Field Fence has a feature which is not embodied in any other line of wire fencing. It is the "hinged stay"—the stay-wires join the laterals with a hinge. Result, practically an unbreakable fence. You can put any strain upon it with bending the wires, because the hinged stays give to the strain and spring back when the strain is removed.

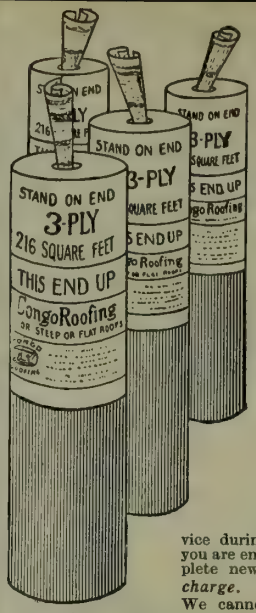
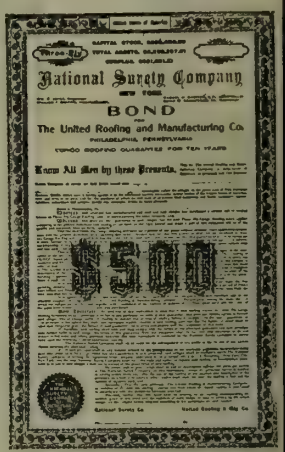
Congo Roofing

Backed by a Surety Bond



Hereafter every roll of Congo Roofing which we sell will be found to contain a Bond of the National Surety Co., guaranteeing the durability of Congo Roofing.



Fac-Simile of Guarantee Bond

Our 3-ply grade is guaranteed for *ten years* and provides that if the roofing fails to give satisfactory service during that period, you are entitled to a complete new roof *free of charge*.

We cannot dodge this guarantee.

The Surety Company's capital backs it up to the letter. It gives you absolute protection.

You don't need to know what Congo is made of or what it looks like; you know that it is going to last you ten years at least and that is the kind of service you want.

Let us have your name and address and we will be glad to send you a copy of the guarantee, together with samples of Congo and booklet telling all about it.

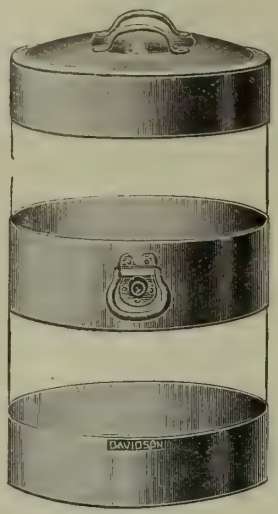
Davidson's Broad Hoop Roll Rim Bottom

Milk Can Trimmings



A combination of strength and durability

Our bottoms have HEAVY ROUND ROLLED EDGES which make them doubly durable, and saves all wear and tear to Factory Floors and Waggons.

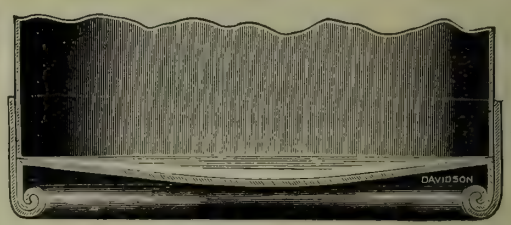
BOTTOMS ARE CONCAVE and drain to the centre, and are therefore easy to wash out.

THEY DO NOT CORRODE like those which drain to the side.

OUR MILK CAN TRIMMINGS ARE UNEXCELLED for ease of making up, and our Patent Roll Rim Bottom makes a strong, neat and fitting completion to any milk can.

We also carry in stock Tinned Iron, cut to size for milk can bodies, which we can supply promptly.

Diagram showing how strongly our Roll Rim Bottoms are constructed



SEE HOW THE OUTER AND INNER RIMS ARE ROLLED IN AND THEN RIVETTED TO BOTTOM HOOP.

IN COMPLETE SETS

"Broad Hoop" Pattern—Composed of the following: 1 Broad Hoop Bottom, 1 Cover, 1 Centre Hoop 6 inches wide, 20 gauge, 1 Broad Top Hoop, 1 pair Cover Handles, 1 pair Side Handles.

DOUBLE THE WEAR

that's the argument that will enable you to sell SHIRREFF'S DIVIDED WRINGER before all others. A dividing bar in the centre causes the rubber rollers to wear evenly along their entire length. In ordinary wringers they wear in the centre only, and become useless in a short time. In Shirreff's Divided Wringer the rollers can't help lasting double the time.

LACKAWANNA WARM AIR FURNACE

From the substantial base ring to the top of the radiator the Lackawanna Furnace is perfect in design and construction. Ashpit is deep and roomy. Grate bars are triangular and revolving, easy to remove and replace. Firepot either sectional or in one piece. Feed door is extra large—ideal for either hard or soft coal or wood. Smoke collar for hard coal is at the side, a cut of plate compelling all products of combustion to go completely around the radiator before making exit. Smoke collar at the back for soft coal. Radiator and combustion chamber are combined in one, having an extra large surface exposed to products of combustion.

You Can Sell This Furnace. Its superiority is indisputable. Illustrated Circular on request.

Butterworth & Co., Limited - - Ottawa, Ont.

Getting Down to First Principles

Thoroughness is the watchword in making "Caloric" Gas ranges—the same thoroughness that goes into all our manufactures. We realize that you have got to offer the public a Gas Range of proven excellence, and we prove ours out before you see them.

That oven there in "Caloric" is the "final effort" in exactness, completeness and responsiveness.

In the internal construction we are *guided* by common sense and uncommon science. That is why we make the walls *double*.

We know that heat *creates* moisture and moisture creates rust, unless there is a "cure" in the *first* construction of the range. The cure in "Caloric" is a *fused aluminum* covering which simply says to Mr. Moisture, "You can't roost here!"

This aluminum, acting as a reflector, *also* aids in the *retention* of heat in the oven.

Consequently a "Caloric" user has the *minimum* number of oven troubles, so the *maximum* amount of praise for your store, and your way of recommending goods.

Talk up "Caloric." If you haven't a sample to talk over, just act on our suggestion to "put one in."

You Can Sell

"SAFE LOCK" SHINGLES

with less argument and more profit, than any other metal shingles.

SAFE LOCK Shingles are this year being made of superior material, and with greatly improved appearance and construction.

There is no longer any notch in the bottom lock, and all the locks are now absolutely uniform, so that they fit together instantly. The impression on the shingles has been deepened and emboldened, resulting in a very handsome finish.

SAFE LOCK Shingles are made altogether by machinery. That insures all locks being perfectly true, and makes them the easiest of all to lay. Our dealers will make more money out of SAFE LOCK Shingles than they ever have before. Are you one of our dealers? If not, why not?

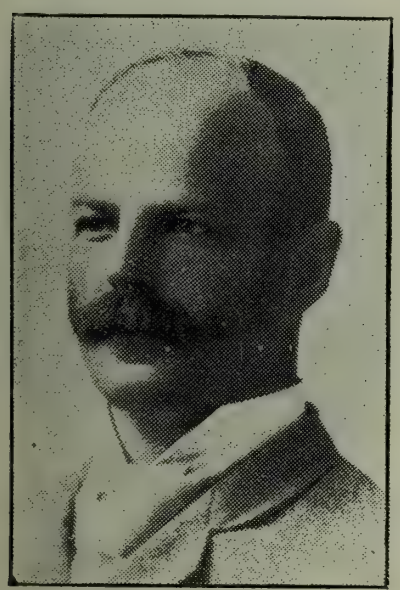
Retail Hardware Association News

Historical Sketch of the Ontario Retail Hardware and Stove Dealers' Association, with a Side Light Upon the Work of Earlier and Contemporary Associations.

In the neighborhood of 300 hardware merchants and salesmen will gather at Hamilton next week—brought together by the fourth annual convention of the Ontario Retail Hardware and Stove Dealers' Association, an organization which less than three years ago had hardly been dreamed of. To-day it stands in the forefront of retail associations in Canada, having started its career in a small way and fought its way upward in the face of difficulties which would have overwhelmed an organization without a mission to perform.

The Ontario Association was not spoon fed. At its first convention it took up a controversial question which prevented the wholesalers from extending an over-warm welcome to the latest addition to the family. And at the second meeting six weeks later a proposal made to



E. R. ROGERS, TORONTO.

President of the Association Formed in 1901.

affiliate with the Retail Merchants' Association was overwhelmingly defeated, this bringing down upon the new association the energetic opposition of the older body with its traveling organizers covering the larger cities and towns.

Despite these difficulties the association grew and prospered, assisted by Hardware and Metal, until it is now a recognized factor in the hardware trade, and with wise management is capable of wielding a great influence for good in making conditions better for the retailer, and indirectly for the manufacturers and jobbers whose welfare is bound up in the success or failure of the retail trade.

Where the Inspiration Came From.

Thirteen or fourteen years ago the foolish and unprofitable price-cutting existing among retail hardwaremen in the middle western States, the development of the mail order trade and the co-operative buying by farmers in the Populist and Patron movements encouraged a few far-seeing hardwaremen in Indiana, Illinois, Ohio, Michigan, Minnesota, Wisconsin, Iowa and other States to organize Retail Hardware Associations to combat the influences destructive to the retail trade. Though started in a small way the movement took root and the past ten years has seen it spread from New England to California and from Florida to Washington, with memberships in several of the older organizations totalling up to twelve and fifteen hundred. Year by year the associations gained prestige and the membership climbed from ten to twenty, to fifty to seventy-five, until it is now in some cases close on to one hundred per cent. of the legitimate retail harware trade.

Early Attempts at Organization.

In Canada various local attempts were made to organize the retail hardwaremen. Probably the most important of these in Ontario was the Ontario Hardware Association, organized in March, 1896, with D. C. Taylor, Lucknow, as president. This association gained considerable strength in the Bruce Peninsula, with Palmerston as a centre, but it did not become provincial in scope. Later on in May, 1901, the Retail Hardware Merchants' Association of Ontario was organized at Toronto with E. R. Rogers, Toronto Junction, as president. After nearly two years' existence this organization merged itself into the Retail Merchants' Association, and under the new auspices a convention was called to meet in Hamilton in 1902 or 1903. The gathering was a fizzle, however, and the "hardware section" of the Retail Merchants' Association became dormant.

In July, 1904, a convention was held at Winnipeg and two associations organized, the "Western" and the "Mani-

Secretary of the Old Manitoba and Western Associations.

ONTARIO CONVENTION PROGRAM.

Tuesday, Feb. 9.

10.30 a.m.—Executive Committee meeting.

2.30 p.m.—Convention (business session).

8.00 p.m.—Convention addresses by R. R. Williams, hardware editor Iron Age, New York, and Robert Munro, Montreal, followed by "Question Box" discussion.

Wednesday, Feb. 10.

9.00 a.m.—Visit Greening Wire and Canada Screw factories.

1.30 p.m.—Convention (business session.)

8.00 p.m.—Complimentary banquet tendered by hardware jobbers and hardware manufacturers of Hamilton.

Thursday, Feb. 11.

9.00 a.m.—Visit Canadian Shovel, Canada Steel Goods and Canadian Drawn Steel factories.

1.30 p.m.—Convention (open to travelers, etc.) Short addresses by C. C. Ballantyne, Montreal; A. A. Briggs, London, and others, followed by "Question Box" discussion.

8.00 p.m.—Complimentary theatre party, tendered by hardware jobbers and manufacturers of Hamilton.

Friday, Feb. 12.—

Hamilton manufacturers invite visiting retailers to visit the blast furnace and other hardware and kindred industries.

Special Railway Rates.

Those attending the convention should ask their railway agent for a one-way ticket to Hamilton and a "standard certificate." This certificate will be signed by the Secretary at Hamilton and a reduced fare allowed for the return trip. Tickets will be good going Feb. 5 to 10, returning up to Feb. 15.

Convention Headquarters.

Waldorf Hotel. Rates, $2 (ordinary), to $3.50 (with bath) per day.

toba," these being merged into one later on. Two representatives of Hardware and Metal attended this convention to help organize the west. Conventions were held semi-annually in February and July, and a salaried secretary-organizer was engaged. The organization attempted to cover Manitoba, Saskatchewan, and Alberta, but the field was too large and disagreements over prices resulted in many withdrawals, and in 1907 it was found impossible to maintain the big organization, the Winnipeg district alone continuing. In 1908, however, the Alberta hardwaremen re-organized and the coming year will probably see Manitoba and Saskatchewan re-organized on a provincial basis.

British Columbia, too, has for several years had an association including Vancouver, New Westminster, Victoria and Nanaimo, and it is planned to extend the organization into the interior of the province.

Local associations exist in Ottawa, Montreal, Halifax and other places and

A. W. HUMPHRIES, PARKHILL,
First President of the Ontario Association.

a committee is now considering the advisability of calling a convention to organize a Maritime Retail Hardware Association, so prospects look bright for a chain of sister associations reaching from one end of Canada to tide water on the other.

The First Convention.

But to get back to the Ontario Association and the first convention on April 13, 1906. Following the death of the "Hardware Section" of the Retail Merchants' Association trade evils became so oppressive that a desire for an organization became general. Hardware and Metal published several articles urging the Retail Merchants' Association to devote some attention to the retail hardwaremen, but Secretary Trowern took the position that as the "anti-combine" law prevented retailers from meeting together and discussing prices it was useless to try and organize the hardwaremen. Finally Hardware and Metal asked its readers in Ontario to express themselves regarding the need of an association. Several letters were received, two of the correspondents, A. W. Humphries, Parkhill, and H. M. Mowat, of Trenton, offering to stand behind a call for a convention. As a result, the editor of Hardware and Metal issued a call asking Ontario hardware and stove dealers to meet at the Rossin House parlors, on Good Friday, April 13, 1906, and on short notice twenty delegates attended and ten more sent their regrets.

Among those attending the meeting were two organizers representing the Retail Merchants' Association, and on their suggestion, Secretary Trowern, of that body, was asked to address the meeting. One of the delegates having stated that in his opinion the meeting should decide to organize an association on the lines of the successful Retail Hardware Associations in the United States and distinct from the Retail Merchants' Association, Mr. Trowern was injudicious enough to utter the threat that if a separate organization were formed his association would put it out of business. Despite the threat the delegates appointed a permanent organization committee and adopted the name, "Retail Hardware and Stove Dealers' Association of Ontario."

While the meeting was almost unanimous in the decision to organize a distinct organization it was decided that the question of affiliation with the Retail Merchants' Association be left open and a second convention called a month later. Secretary Trowern stated that several hundred hardwaremen belonged to the "Hardware Section" of his association and it was decided that invitations to attend be sent to these by Mr. Trowern, while the secretary of the new association would send out a general invitation to the trade.

The meeting adjourned by electing the following provisional officers: President, A. W. Humphries, Parkhill; vice-presidents, W. G. Scott, Mt. Forest, and J. R. Hambly, Barrie; treasurer, John Caslor, Toronto, and secretary, Weston Wrigley, Toronto.

The Second Convention.

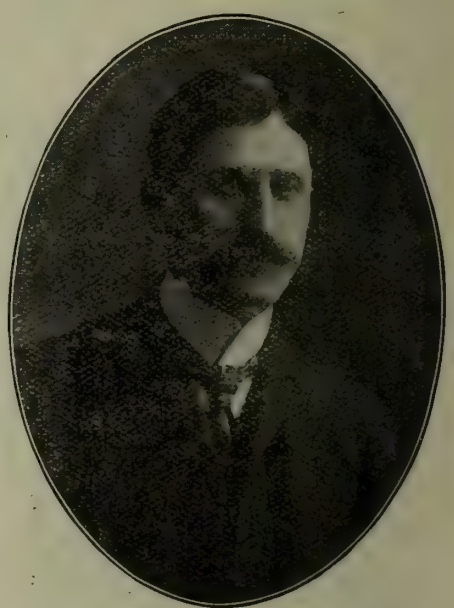
On May 15 and 16 the second convention was held at St. George's Hall, Toronto. One hundred and twenty dealers had enrolled in response to the call sent out by Secretary Wrigley, and of these 45 attended. Secretary Trowern was also present with his organizers they claiming to have 125 proxies from 275 members of their "hardware section." The provisional committee recommended that only members who had paid their fees and were in attendance at the convention be allowed to vote, and after a long and disagreeable discussion a motion "that the name adopted at the previous meeting be ratified and a separate association formed" was carried by a vote of 34 to 1.

The convention then got down to work, adopted a constitution and by-laws, took action upon some trade grievances and elected officers, the provisional officers being re-elected, along with an executive committee composed of J. W. Peart, St. Mary's; T. Marshall, Dunnville; F. W. Jeffery, Midland; E. P. Paulin, Goderich; D. Brocklebank, Arthur, and F. Taylor, Carleton Place.

The convention accepted an offer of an "Association" page in Hardware and Metal, and were also the guests of Col. J. B. MacLean at a dinner at the King Edward Hotel.

The Third Convention.

On Sept. 4 and 5, 1906, another convention was held during the Toronto Exhibition, the meetings being held in the Labor Temple, and 34 being in attendance. The features of this meeting were the reports on Mutual Insurance,

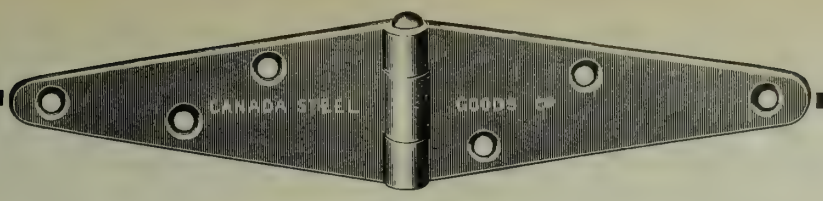


W. G. SCOTT, MT. FOREST,
Second President of the Ontario Association.

compiled by J. Walton Peart, of St. Mary's, and the interesting addresses delivered by Fred C. Lariviere, Montreal. A deputation was also sent to interview the Canadian Wholesale Hardware Association regarding the abolition of cartage charges and other trade grievances. A proposition was made that a Dominion Retail Hardware Association be formed, Secretary Wrigley having attended the Western Association convention at Winnipeg in July, but it was found impossible to carry out this project.

Second Annual Convention.

The second annual convention was held in the Labor Temple, Toronto, on March 28 and 29, 1907, over 50 delegates being present.



Crescent Brand

Registered

A Story on

—Hinge Quality—

By C. S. G. C.

A few years ago this company began to make

Butt Hinges and Strap and Tee Hinges

paying particular attention to the QUALITY of material and the workmanship. We were told that any kind ot a hinge was a hinge, and that they were not required as good as we made them.

We kept right on, and to-day we say "thanks" for the large business you are giving us.

Our competitors ask the jobbers to buy theirs at any old price—if they are not low enough to-day, why to-morrow they are lower--and jobbers who do not care for the demands of your customers ask you to take inferior goods because there is more money in it for them. REFUSE to take them, as you have been doing, and sell only Hinges that are made as "you" want them, and if your dealer cannot supply you, send your order to us and we will.

Our goods will not cost you any more than the other makes.

The "Crescent Brand"

is on every hinge and they are made only by

Canada Steel Goods Co.

Limited

Hamilton, Ontario

Probably the most important matter dealt with was the discussion upon collecting accounts, this resulting shortly after in the establishment of the "Collection Department" using two form letters drafted by Mr. Peart, of St. Mary's.

A resolution was also adopted thanking Hardware and Metal for its assistance in arousing the retailers throughout Canada in opposition to the proposed parcels post c.o.d. law. The Postmaster-General was inundated with wagon loads of petitions and letters of protest until he finally withdrew his proposal saying he "could not fight against windmills." He stated, however, that the proposal might be heard from later.

A second dinner was tendered the delegates by Col. MacLean.

The election of officers resulted as follows: President, W. G. Scott, Mt. Forest; vice-presidents, J. R. Hambly, Barrie, and J. Walton Peart, St. Mary's; treasurer, John Caslor, Toronto; secretary, Weston Wrigley, Toronto; executive, A. W. Humphries, Parkhill; D.

J. R. HAMBLY, BARRIE,

Third President of the Ontario Association.

Brocklebank, Arthur; F. Taylor, Carleton Place; G. A. Binns, Newmarket; W. A. Mitchell, Kingston, and H. Becker, New Hamburg.

Third Annual Convention.

On Feb. 12 and 13, 1908, the third annual convention was held at the Palmer House, Toronto, over 90 being registered on the delegates' roll.

The convention dealt with various questions and heard another good report on mutual fire insurance, made by Mr. Peart, chairman of the Mutual Insurance Committee. The constitution was revised and an amendment to admit travelers to membership was laid on the table for one year.

Porter A. Wright, president of the Michigan Retail Hardware Association, was an interesting visitor at the convention, taking charge of the "Question Box" discussion.

H. S. Howland & Sons, Toronto, entertained the delegates to a dinner and an invitation was received from Wood, Vallance & Co., Hamilton, to hold the 1909 convention at that city, the convention voting unanimously to accept the invitation.

The officers elected were: President, J. R. Hambly, Barrie; vice-presidents, D. Brocklebank, Arthur, and A. Ballantyne, Brantford; treasurer, John Caslor, Toronto; secretary, W. Wrigley, Toronto; executive committee, W. G. Scott, Mt. Forest; J. Walton Peart, St. Mary's; D. Cinnamon, Lindsay; R. C. Chown, Belleville; W. H. Richardson, Essex, and J. R. McMillan, Guelph.

Parcels Post C.O.D.

Amongst the many questions taken up by the Association that of the parcels post c.o.d., was undoubtedly the most important, affecting as it does practically every merchant outside the very large cities. Had it not been for the Ontario Retail Hardware Association and Hardware and Metal, it is certain that every postmaster in Canada would to-day be acting as a c.o.d. collections agent for the large mail order houses in Montreal, Toronto, Winnipeg and other cities. Hardware and Metal has on many occasions pointed out that a healthy and happy farm life will be Canada's greatest asset, and the small towns and villages are the centres around which the country residents must gather. Anything, therefore, tending to curtail the growth and destroy the life of the small country communities is a blow struck at the dynamo from which Canada must receive its life force in future. Recognizing the importance of the work of the Retail Hardware Association, the Canadian Wholesale Hardware Association, at its last convention, appointed a committee to deal jointly with a committee of the Retail Association in dealing with the parcels post c.o.d. and other questions affecting the trade as a whole.

Mutual Fire Insurance.

Nothing has helped the Retail Hardware Association in the States more than the benefits the members of the associations receive in the way of rebates on fire insurance premiums. Any member of a Retail Hardware Association is entitled to place his fire insurance with a Retail Hardware Mutual Fire Insurance Company, about a dozen of which have built up large reserve funds, besides paying annual rebates to insurers varying from 25 to 50 per cent.

The matter has been gone thoroughly into by the Ontario Association, but it has been found that the old line fire insurance companies have had their lobbyists do their work so thoroughly that under existing laws it is impossible for a mutual company to secure a charter to do business in Ontario, except by obtaining a Dominion Charter and depositing $250,000 as the Canadian Manufacturers' Association have done. An arrangement was suggested with a firm of insurance brokers representing two fire insurance companies outside the Underwriters' Association, but this was found to be unworkable. Then an offer was received from one of the most successful hardware mutuals in the States, it being proposed that the Ontario Secretary act as agent and secure insurance members to pay regular tariff rates and receive the same rebates as paid to members across the line (40 to 50 per cent. in this company). Legal advice was taken and it was found to be illegal to have any dealings whatever with a foreign mutual fire insurance company. The old line companies have the laws completely in their favor, and it now remains for the Association to demand from the Legislature the right to form a mutual fire company along the lines so successfully worked out by the Retail Hardware Associations in the United States.

The Collection Department.

Nearly two years ago the Association decided to take up the collection of ac-

FRED C. LARIVIERE, MONTREAL,

Who Will Have Charge of the "Question Box" at Hamilton.

counts for its members, and form letters were printed for sale in 100 lots at $1, little more than the cost of printing. To date about 110 members are using the system, and the following written by C. B. Miner, Cobden, on February 1, illustrates the worth of the department:

> "Since receiving the collection letters a little over a year ago we have collected over $200 and nearly every one who has not paid has sent an acknowledgment promising to pay as soon as they can. I consider it is the best investment that I have ever made."

During the past year the department has been strengthened by an arrangement with a prominent firm of Toronto lawyers, they allowing the use of their name on the Association collection let-

The Burrow, Stewart & Milne Co., Ltd., Hamilton, Ont.

ters, and also agreeing to send the following letter on their own stationery for a fee of 25 cents for each letter:

Home Life Building,
Toronto, ...1909.

John Smith, Esq.,
Smithville, Ont.

Dear Sir,—We have been advised by the Ontario Retail Hardware Association that you have ignored their letters to you asking for the payment of ...., being the amount of Messrs. .. .. account against you.

Particulars of this account have been supplied you, and unless paid by you at once there is only one alternative—the issuance of a writ of summons at the next sitting of the Division Court. If the account is put in the bailiff's hands for service, there will, of course, be additional charges which you will have to pay. See that you save the incurring of these costs by attending to this claim forthwith.

Yours very truly,
LAWRENCE & DUNBAR.

The letter should prove a valuable adjunct to the Collection Department, and delinquents who cannot be brought to time with the collection and lawyer's letters are hardly worth further attention, unless they are worth sufficient to proceed against in the Division Court.

Trade Grievances.

The Ontario Association has, during its three years existence, certainly had a good effect upon the trade in minimizing the evil of jobbers and manufacturers selling to consumers at trade prices. Up to three years ago this was a growing evil, and while it cannot be said to have been entirely eradicated there certainly has been an improvement as fewer complaints are being received by the Association.

The cartage charges question has been a source of much irritation between the retailers and jobbers. The Retail Association protested to the wholesalers about having to pay cartage charges at point of shipment. The jobbers refused to make a change and changed their terms from f.o.b. cars to f.o.b. warehouse. Many retailers continued to demand rebates on cartage paid, and finally the Retail Association took the matter up with the wholesalers again, and placed the matter in the hands of J. W. Curry, K.C., to bring before the Railway Commission asking (1) that the Railway Commission abolish the special charge for cartage and include it in the freight, or, (2) that the wholesalers pay the charge. The lawyer gave his opinion that the Railway Commission would refuse to deal with the matter as outside their jurisdiction, the matter being one for arrangement between buyer and seller. The matter rests at this point at present.

Other questions as yet undecided are the requests that enamelware seconds be marked as such, that the marking of a second grade white lead as No. 1 be discontinued, and that the Division Court Act be amended to allow the collection of accounts under $25 by garnishment.

Educational Advantages the Greatest.

In the opinion of many, the greatest advantage to be gained from Association work is in attending the conventions, taking part in the "question box" discussion, taking with other hardwaremen, visiting hardware factories and seeing the exhibits, and overcoming the narrowness which is the inevitable result of keeping within the confines of one's own four walls. At the convention a dealer finds that his fellow hardwaremen are good fellows from whom he can pick up pointers worth learning.

WESTON WRIGLEY, TORONTO.

Secretary Since the Ontario Association was Organized.

The Association should pass the 300 mark in membership during the present year, over 250 being now enrolled. Many who were brought in by organizers in the early days of the Association, and who have failed to attend recent conventions, have failed to keep up their dues, and a dozen or so have withdrawn from membership. At no time in the history of the Association, however, has there been a better satisfied membership than at the present time.

Gaining in Prestige.

And that the prestige of the Association is growing is shown by the action of the Wholesale Association in co-operating with it and by the steady increase in members from the larger cities and towns. In the first year the officers all represented towns and villages, the largest being Barrie, with 7,500 population. In the third year, Brantford, Guelph and Belleville, all progressive cities, are represented on the executive.

All credit to the far-seeing retailers in the smaller towns who brought the Association into existence, and more strength to the dealers in the larger cities who are now giving the organization the benefit of their wider experience.

J. WALTON PEART ILL.

There will be one vacancy on the council board at the Hamilton convention next week, in the person of J. Walton Peart, St. Mary's, one of the founders of the association and undoubtedly the most active executive member, he having done the bulk of the work on the mutual insurance committee, as well as being chiefly responsible for the establishment of the Collection Department.

Seven weeks ago Mr. Peart had to take to his bed with an illness which developed into typhoid fever. It is understood that he is now past the danger point, but it will be a couple of weeks before he can sit up and considerably longer before he is around again. Mr. Peart never appeared to be over-endowed with strength and his numerous friends will hope that his present illness will act as a tonic and his health in future will be much improved.

During the past year Mr. Peart took an active part in establishing the St. Mary's Woodenware Co., manufacturers of hockey sticks, etc., he and Mrs. Peart making a trip as far west as Portland, Oregon, last summer.

St. Mary's Hardware, Limited, will be represented at the Hamilton convention by W. R. Carr.

MARITIME HARDWARE MEN IN WEST.

W. E. Robertson, Halifax, President of the Maritime Wholesale Hardware Association, and W. Shives Fisher, St. John, past president, visited Montreal and Toronto last week to confer with members of the Canadian Wholesale Hardware Association on the question of shortening the terms of credit on hardware from 90 to 60 days. The matter will be discussed at a meeting of the Canadian Wholesale Hardware Association at Toronto next Tuesday.

SPECIAL RATES INCLUDE LADIES.

Several members have written asking if the special railway rates include the wives of members.

Yes, any member can bring his wife, his daughter, his son, his clerk, or any one else excepting, of course, some other man's wife. The only stipulation is that those coming must be in connection with the convention as the secretary must sign all certificates. The more members who bring their wives the more likelihood of reaching the 300 limit and securing the return fare free.

Amongst those who expect to be accompanied by ladies are J. R. Folsetter, Ayr; W. J. McAllister, Kincardine, and J. D. Smith, Baysville.

What Members Say About the Convention

"Nothing but the smallpox or German measles will prevent the writer attending the convention at Hamilton next week."—W. G. Pow, Tillsonburg.

"I hope your membership list is gaining. I have been trying to get our opposition to join but do not know whether I will be successful or not."—J. B. Carscallen, Dresden.

* * *

"I would not like to miss a meeting of the association."—J. S. Allen, Burlington.

* * *

"After last year's experience at the convention, I certainly mean to be tagged this year. I feel it is a 'Mutual Benefit Association,' whereby we may insure prosperity to our business, reaping immediate benefits, as no member can leave the convention without having profited by the open discussions, and private talks among members, and it only remains to put into use the knowledge thus obtained to reap the benefit. I hope each member who goes to reap, from what others sow, will go prepared to sow, that others may reap. This means success. The Question Box is a fertile spot to drop the seed in."—W. F. McPherson, Prescott.

* * *

"W. D. Dewar will represent us at the convention in Hamilton. He is also taking with him Findlay V. Ryan, who is working with us in the business."—Mackie & Ryan, Pembroke.

* * *

"We wish you continued success in steering the hardware interests."—Adamson & Sproule, Orangeville.

* * *

"Would it not be well to have the question of oil manufacturers selling oils and greases direct to mills and threshers taken up at the convention. McCall Bros. used to have a good trade with the merchants at Caledonia, but they went after the threshers' trade direct and consequently I believe they only have one account with merchants here now as the result."—McGregor & Co., Caledonia.

* * *

J. C. Chalmers, Palmerston, who was asked by one member to attend the convention and give his experience with the cash system, writes:—"I intend to be present and will be only pleased to give any information I can regarding the cash business, which is, to my mind, a howling success but I will not attempt to express myself publicly, as this is out of my line."

* * *

"We notice in Hardware and Metal that you have received $1.20 from Udney and that you are looking for an owner. We sent out a notice for this amount to "H. L." of Rathburn, but as he lives between that place and Udney it might be just possible that his address is Udney. If same is for us please deduct amount of postage from the same when remitting. We find the collection forms very satisfactory as they are a great help in getting in small amounts which are hard to get otherwise. Hoping to have the pleasure of seeing you at the "Meet," which, no doubt, will be larger than ever."—MacNab Bros., Orillia.

* * *

"At the annual meeting two years ago I advocated the mapping of Ontario into workable districts, that had much in common, and that these district associations would meet and discuss what concerned them locally, appoint delegates to a general association, and, if need be, pay their expenses. Consider what it would cost in time and money for a hardwareman at Kenora to go to the meeting in Hamilton next week! It will take a full week for a Kenora, Fort William or Port Arthur hardwareman and cost fully $100. Now how much have we New Ontario hardwaremen in common with say the men of Chatham or Windsor? Some lines are common to all, but many are not. Ontario is a large province and a few men in the frontier counties cannot adequately deal with matters that concern all the immense country behind the lakes. This is my view and I think I am right. You may lay this before the association if you think it worth while."—Jas. Purvis, Sudbury.

EXHIBITORS AT CONVENTION.

The following firms have arranged to make exhibits at the Waldorf Hotel, Hamilton, during the convention on Feb. 9, 10 and 11:

Taylor-Forbes Co., Guelph; D. Maxwell & Sons, St. Mary's; E. C. Atkins & Co., Hamilton; S. F. Bowser & Co., Toronto; Gillette Saftey Razor Co., of Montreal; AutroStrap Razors, Montreal; Shurly & Dietrich, Galt; Canada Paint Co., Montreal; Standard Paint Co. of Canada. Montreal; Metallic Roofing Co., Toronto; Brantford Roofing Co., Brantford; F. W. Bird & Co., Hamilton; John Mansville Co., Toronto; Dowswell Mfg. Co., Hamilton; Gurney-Tilden Co., Hamilton; Supreme Heating Co., Welland; Jones Register Co., Toronto; Carborundum Co., Niagara Falls, N.Y.; Canadian Hart Wheels, Hamilton; Pittsburg Perfect Fence Co., Hamilton; Canada Wire Goods Mfg. Co., Hamilton.

The following firms may also exhibit: Canadian Cordage Mfg. Co., Peterboro; Lufkin Rule Co. of Canada, Windsor; Dover Mfg. Co., Canal Dover, Ohio; Moffat Stove Co., Weston; Boss Washing Machine Co., Cincinnati, Ohio.

THE QUESTION BOX.

Here are a few questions handed in for discussion during the "Question Box" feature of the retail hardware convention at Hamilton next week:

What is the best method of keeping show windows free of frost?

* * *

What has been the experience of members with window displays of one line of goods, safety razors, for instance?

* * *

What kind of advertising by manufacturers is most helpful to the retailer?

* * *

Is it not good policy for hardware merchants to take an active interest in movements tending to educate the farmers and help them to make their farms more productive? Will this not bring more business to the hardware store?

* * *

Do you use the charge key on a National cash register with satisfactory results and, if so, did you have any difficulty in accomplishing it? The writer has a six drawer machine.

* * *

What advantage can a retailer secure from his banker? Can a line of credit be arranged covering a year and can bank exchange be overcome?

* * *

Could the association secure data from members to the cost of doing business in order to help members in figuring their costs properly?

* * *

What is the best method of making clerks good salesmen?

* * *

Should clerks be paid by the hours they work or the sales they make, and what should be a good day's sales for a clerk?

* * *

Does it pay to keep a retail store open after 7 p.m. on ordinary week days?

* * *

Is it advisable for a successful retail firm to establish a branch store in an adjoining town or village?

* * *

On what class of goods do hardware merchants experience mail order competition the keenest?

* * *

Does good buying depend mostly upon price or upon selection and quality?

* * *

Does it pay to use the long distance phone in ordering goods?

* * *

What percentage of sales should stock be?

* * *

Is it possible to increase the margin on staples and decrease it on other lines?

* * *

Should we encourage manufacturers of patented specialties to establish a uniform retail price?

* * *

When is a jobber or manufacturer justified in selling outside of regular channels?

Convention Notice

Do not fail to see us in Room 34, Waldorf Hotel, Hamilton, the Convention Headquarters, Feb. 9th, 10th, and 11th.

We are the only manufacturers of Metallic Shingles, Siding, Ceiling and Lath who have protected the trade for 24 years.

Most metal roofing manufacturers are going direct to the consumers.

If we are to continue protecting you it will be necessary for you to protect us by pushing the sale of our "Metallic" goods.

There is money in it for you.

Will you do it? Or must we also go direct to the consumer?

It is for you to say.

The Metallic Roofing Co., Limited

Manufacturers

Toronto - - Winnipeg

TRAVELERS IN U. S. ASSOCIATIONS.

A. R. Sale, secretary of the Iowa Retail Hardware Association, writes.—"Our association admits travelers as honorary members, they paying a fee of $1, which entitles them to a badge. We do not permit honorary members to participate in the discussions in the meetings, unless in the case of some who have retired from the hardware business, and have taken an honorary membership, on account of their retirement. These being old hardware merchants, we, of course, give them all the privileges of the convention meeting. We are also arranging for the fourth day of our convention, a special traveling men's hour, this to be in charge of three prominent traveling men of the state, who will furnish us with topics that they wish to discuss. All traveling men are requested to be present and take part in the discussions."

J. Frank Barr, of the Nebraska Retail Hardware Association, writes:—"We are very glad to have traveling salesmen in our association and we charge them only a nominal amount of dues, being $1 per annum. We find that they are the best "boosters" and always have a good word to say for our association and influence, a great many retail merchants to both join the association and attend our annual convention. We admit them to all meetings except the executive sessions, where none except the members are admitted."

M. L. Corey, secretary of the Indiana Retail Hardware Association, writes:—"Our experience with travelers as associate (or honorary members as we call them) has been satisfactory. As a rule we have not found that they bring us in many new members, but they are always talking and building up favorable sentiment. They are very useful when it comes to making our conventions pleasant and agreeable as their acquaintance is a very wide one. In some states they pay as high as $5, but in nearly all the rate is $1. In our state this includes admission to any open sessions, subscription to the National Hardware Bulletin and anything along the line of entertainment that our association furnishes, also a badge. We admit honorary members to any of our open sessions and they frequently take part in the discussions."

L. D. Nish, secretary Illinois Retail Hardware Association, writes:—"Our association has never induced the traveling men to enroll themselves as members of our association, although some of the State Associations have done so. However, the traveling men have been induced to co-operate in securing some members and some of our good traveling men have brought in as high as 30 or 40 members in one season. It has been our practice for several years to have but one open meeting, the remaining meetings being executive sessions, open to members only."

M. S. Mathews, secretary Minnesota Retail Hardware Association, writes:—"We have an excellent organization in Minnesota, with very nearly nine hundred members paid this year, and the coming meeting is our thirteenth. We have never made effort to gain associate members, and with two exceptions, our membership is straight retail hardware."

A "MADE IN HAMILTON" EXHIBIT

A Departmental Store Display Full of Suggestions for Hardwaremen—A Hardware Store That Has Grown Into a Large Mail Order House.

With the hum of dynamos and the buzz of machinery, the "Made in Hamilton" exhibit of the Stanley Mills Company, to which the delegates to the Ontario Hardware and Stove Dealers' Association convention have been invited to secure an idea of the magnitude of Hamilton's manufacturing interests, was opened on Wednesday, the exhibit comprising the entire third floor of the big department store developed by Stanley Mills, an old hardwareman, who still conducts a straight hardware store as an integral part of the business.

There are a number of exhibits which are not particularly hardware, but the majority of them are of interest to the hardware trade. An array of pretty booths and machines decorated with electric lights makes the exhibit very attractive. All of the hardware exhibits are for the most part on one side of the room and a shaft running behind the booths supplies motive power for the machines. One of the first exhibits

Welcome

To each and every member of the Retail Hardware Association we bid a hearty welcome to the "Ambitious City," and extend an invitation to visit our factory at any time during the Convention.

which catches the eye is that showing the saws manufactured for Stanley Mills in St. Catharines and which are shown in their various stages of manufacture. Then comes the Dowswell Manufacturing Company exhibit, showing the lump of rubber imported from South America and made into rollers for the wringers.

The exhibit of the Hamilton Steel and Iron Company is about the most interesting, showing how pig iron is made from a combination of charcoal and iron ore, as well as how the pig iron by the influence of natural gas is made into steel and how the steel is turned into all kinds of iron work before it leaves Hamilton.

The Canada Screw Company's exhibit of the manufacture of screws is also interesting as is that of the Canada Steel Goods Company, illustrating the manner in which steel whiffle trees, steel door hinges, etc., are made. The Gurney-Tilden Company is displaying its new line of builders' hardware, such as fancy door locks of all styles and materials.

In the exhibits of the Meakins Brush Company are shown all sorts of brushes which until a few years ago were imported from the United States. The Dominion Belting and the Commercial Oil Companies' displays are aslo attracting considerable attention, as is that of the Canadian Drawn Steel Company.

Very interesting exhibits are those of the Canadian Westinghouse Company and the Cataract Power Company, which demonstrated the evolution in the electric art. Such recent inventions as electric smoothing irons, heaters, etc., as well as the well known "Brilliant" incandescent lamp made by the Ontario Lantern and Lamp Company, are shown along with a good display of their lanterns arranged in tiers to be seen to advantage.

Farther on are shown several machines in operation, including a stitching machine of James Jolley & Co., and a large tinners' power press of the Brown, Boggs Company, which practically has a monopoly in this line in Canada. The Canadian Meter Company is exhibiting an acetylene gas meter which is mostly for private gas users and is more than ordinary interest.

The display of wire goods by the B. Greening Wire Company demonstrates more than words can tell what an important adjunct this concern is to Hamilton's manufacturing industries. Every kind of wire in use in Canada to-day is exhibited there, from the fine green wire cloth, of which the firm are the sole makers in Canada, to the heavy cables and wire reinforcing for concrete walks.

The exhibits which probably will attract the interest of the manufacturers more than anything else is that of the technical school. Students are on hand showing how the scholar is taught to be a proficient mechanics.

The Burrow, Stewart & Milne Company has an interesting display of gas and coal oil stoves and scales, while the F. W. Bird & Son Company is exhibiting its well-known Paroid roofing paper. Other concerns which have space are the Hamilton Mirror Plate Company, the Domestic Specialty Company and Chadwick Bros., manufacturers of electrical supplies.

As Mr. Stanley Mills is a member of the Ontario Hardware and Stove Dealers' Association the delegates to the convention can be assured that they will receive every attention from them so far as seeing and enjoying the exhibition is concerned.

Patronize Home Industry.

Three years ago Stanley Mills conceived the idea of a "Made in Hamilton" show and he is now for the fourth time featuring the event. The idea appeals to the local pride of the citizens and encourages unprogressive firms to make their wares known. For instance, there is an Axminster carpet factory in Hamilton which was practically unknown to the great majority of the citizens until the exhibit was made in the Mills store.

A year ago the accompanying advertisement was run in the Hamilton papers, the aim being to appeal to the people of Hamilton to support local factories and stores. And a glance at the "bricks" in the structure shows how important hardware industries are in the "Industrial City."

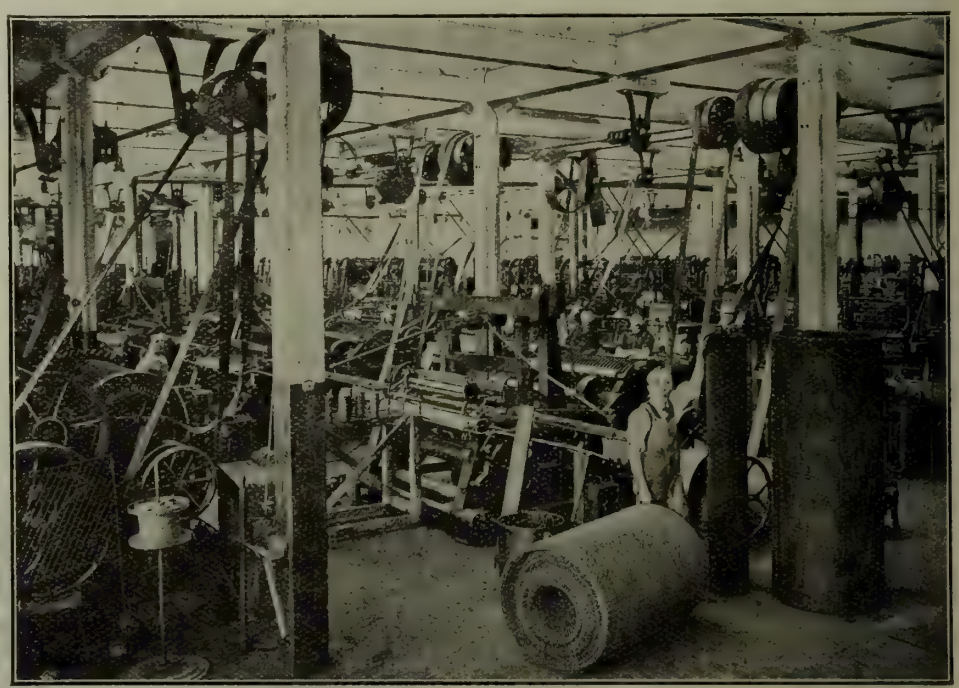
The Peterboro Hardware Company last year used a similar idea in their "Made in Peterboro" window display and it is understood the Eaton Company are to put on a "Made in Canada" exhibit in their Toronto store this month.

A new idea attracts attention and the progressive hardwareman is always on the alert to pick up a suggestion and develop it to suit his local conditions. Many will, therefore, visit the exhibit and make the acquaintance of Stanley Mills, who is an enthusiastic advocate of both buying and selling for cash and ever-ready to express his ideas on business matters.

THE GREENING WIRE PLANT.

During a recent visit to this establishment, a representative of Hardware and Metal was much impressed with the extent of the additions made to the buildings and plant in the last eighteen months.

The new weaving mill, shown in the accompanying illustration, is one of the best structures of its kind in Canada, being 260 feet long by 130 feet wide. At the end is a temporary enclosure, which will be removed and further extensions made, as soon as trade warrants it. The building is devoted entirely to wire weaving machinery, and it was interesting to see the ponderous looms, some of them over 15 tons in weight, making, with apparent ease, extremely heavy smoke stack netting, mining screens, etc., as wide as 72 inches; and the fast-running smaller looms engaged in making meshes as fine as No. 70 of brass wire for sleeping car ventilators.



Interior of B. Greening Wire Co.'s Weaving Mill at Hamilton.

The other new buildings in the plant are the wire mill, cleaning house, with a capacity of 50 tons per day, and the carpenter shop, which is isolated from the other buildings, the increased yard room being used for the different kinds of lumber.

We can only make casual mention of the many other interesting features of

this important industry, such as wire rope spinning, wire drawing and galvanizing, poultry netting twisting machines, presses for perforating all kinds of metals, for all purposes, automatic wire chain machines for making the celebrated Greening's chains, etc. These processes are carried on in the older buildings.

The members of the Retail Hardware Association will visit this industry in a body on Feb. 10, and the firm expressed much pleasure at the anticipated visit.

every delegate at the Ontario Retail Hardware Association convention at Hamilton next week.

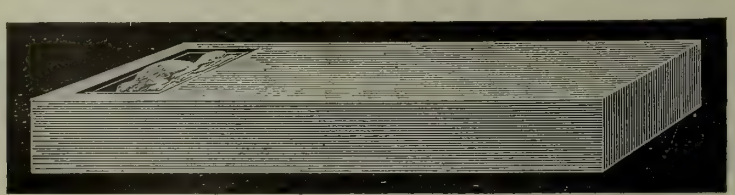
Hamilton and Toronto Sewer Pipe Co.'s Works at Hamilton.

HAMILTON SEWER PIPE WORKS.

One of the oldest factories in Hamilton is that of the Hamilton and Toronto Sewer Pipe Co., which was established in 1860. Their works are located on Wentworth Street at the crossing of the Grand Trunk Railway and their present plant is the largest and most modern in Canada, they having ten large kilns which turn out large quantities of excellent sewer pipe. The factory is two stories high, with a large drying room on each floor, enabling them to take the pipe from the presses and place them on each floor, so that there is no extra handling from floor to floor on elevators such as is seen in many other sewer pipe factories and thus avoiding crooked ends and bent pipe. A large stock at all times is carried in extensive piling grounds the company's business extending to all parts of Canada. Hardwaremen, when in Hamilton are invited to call on them and see what a modern plant can do.

SOUVENIR OIL STONE.

The Canadian Hart Wheels, Limited, Hamilton, are introducing a new oil stone having very quick cutting qualities known as the "Beaver," and are planning to present a sample stone to every delegate at the Ontario Retail Hardware Association convention at Hamilton next week.



Beaver Oil Stone, Made by Canadian Hart Wheels, Hamilton.

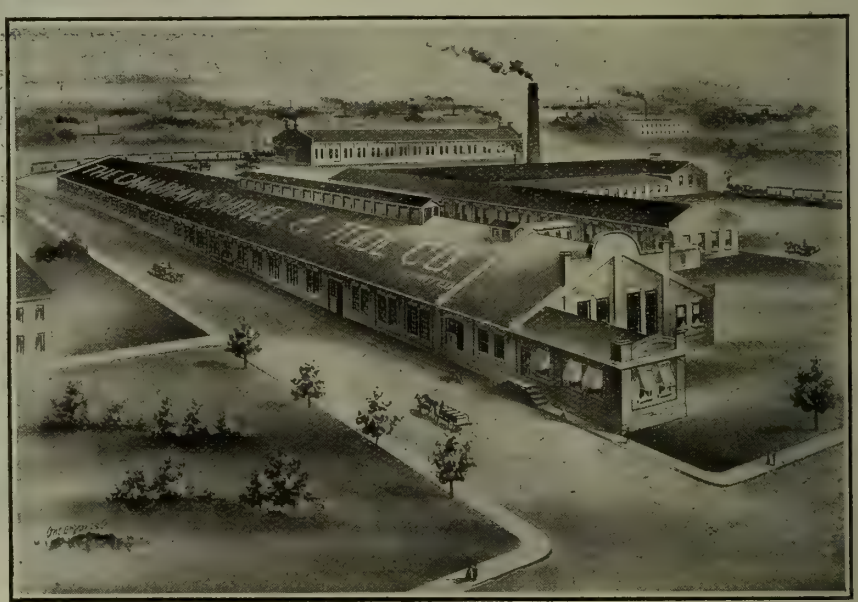
The stone gives a very fine edge and is made in a number of different degrees of coarseness. The company have had the new stone tested in Canada and the United States, and guarantee it to equal anything on the market. As this is the first stone of its kind ever made in Canada the samples distributed will undoubtedly be examined carefully and valued as souvenirs.

The company are just issuing a new catalogue for their sharpening stones and in it state that the Beaver stones are of an entirely different nature than emery goods, being adapted for similar uses to the Arkansas, Washita and other natural stones. In addition to the Beaver stones the catalogue illustrates emery and corundum scythe stones and knife sharpeners, axe stones, rubbing blocks, files, grinders and wheels. The book is known as Catalogue "D," and copies will be forwarded to any Canadian dealer on request.

SHOVEL AND TOOL WORKS.

The Canadian Shovel & Tool Co.'s new plant situated in the new manufacturing district of Hamilton, was started in 1905, and after four years their Bull Dog and Fox Shovels are favorably known throughout the Dominion.

Great attention was paid to the design of their plant and after a careful and elaborate study of the shovel plants of Great Britain and the United States, they have what they consider the most complete shovel plant on the continent. Their power is supplied by electric motors which are attached in many cases to individual machines and are driven by Morse Chain drives and in the polishing and finishing departments the line shaft is carried in an underground pit which drives from below, leaving a clear floor space for other operations. Natural gas and oil are used for fuel.



Canadian Shovel & Tool Co.'s Plant at Hamilton.

The company owns the "Skelton" patent for the manufacture of Solid Shank shovels and spades and their machines are built to special design for the manufacture of this tool, which is radically different from any other shovel manufactured in Canada. From the time that the bars of steel enter the door, it is one continual process, the raw product making a complete circuit of the factory until it reaches the warehouse a finished tool. They have perfected a Split "D" Handle, which is claimed to be much superior to the ordinary type of "D", and owing to the fact that they make these handles themselves, they guarantee the trade a better grade of wood than they could supply formerly. It is a very interest-

ing operation to see the formation of this new "D" Handle, which is very radically different from the old type of "D" and visitors to the plant during next week's convention are expected to be interested in the process.

CONDUCTS A CASH BUSINESS.

An interesting little hardware store at Hamilton is that of the Mills Hardware Co., 94 John Street South, a couple of blocks in the rear of the Waldorf Hotel. Mr. Mills, who conducts the store, has had considerable experience in Western Canada, and is an advocate of showing all goods he can in such a manner that customers can pick up and examine any article they fancy. In this way, he contends, the goods sell themselves.

The bin system is used in the store, similar to the 15 cent stores but as 75 per cent. of their business is done with the farmers the firm adapt themselves to farmers customs and show goods suitable for this class of trade. All seasonable goods are shown on the ground floor and heavy goods are brought to customers' attention by hangers such as are shown in the illustration.

A few points Mr. Mills emphasizes are 1, a cash business; 2, a bright, clean store; 3, all goods in plainly shown; 4, goods priced in plain figures; 5, wide awake clerks; 6, plenty of good advertising; 7, good show windows; and 8 push the goods that bring the best profits.

Mills Hardware Co.'s Store at Hamilton.

HAMILTON'S STORE'S SIDE LINE.

Thomas Ramsay, Hamilton, whose store is on the Market Square, is showing a novel side line in the form of a rack of Indian-made bows and arrows. Mr. Ramsay got a lot of these in the summer of 1906 and they sold very quickly. His present lot were received too late in the summer to move out, and they are not a line that can be pushed in the winter, but when spring opens Mr. Ramsay expects to sell them easily with a good margin of profit.

GETTING RID OF ODD LINES.

P. E. Boniface 57 John St., Hamilton, who does a good country trade in housefurnishings, displays a large clothes basket inside his store door labeled "Snaps, 5 cents." The basket is filled with parcels neatly wrapped and all containing dead stock articles retailing from 5 cents to 15 cents. Mr. Boniface states that he finds this a good method of getting rid of odd lines, the basket accomplishing a two-fold object, that of disposing of dead stock at about cost, while also catering to the human nature of customers, many of whom take a chance in the "grab bag" and afterwards tell him "Why that's just what I want." And when women customers get a 15-cent article for 5 cents they are pleased with themselves and are better friends of the store.

Benefits of Local Associations

An Address by H. L. Anderson Before Southern Jobbers on the Value of Local Associations—Be on Friendly Speaking Terms With Your Competitor —Help Him and He Will Help You.

I know that every member loves our association, not only for the good it has done us, but for the strong ties we have formed, and we look forward each year with delight as the time rolls around to meet at our next gathering, and, gentlemen, if you will form a local association, you will look forward with just as much pleasure as the time rolls around for you to have your local meeting, and my word for it, it will be just as much if not more money in your pockets to have and cultivate these meetings.

I would not under-value our association, but local associations are quite as important as the large association. It is just as important to know and get better acquainted with your competitors in your home town. I have in mind one man who said he never went into his competitor's store or spoke to him if he could avoid it, and he went broke. Now I am not prophesying that you will break if you do not form and have a local association. This particular party broke because he did not get enough profit on his goods. He tried to run his competitors out of business, and in doing this, he put himself out. Now how much better it would have been if this man had desired his neighbor's welfare, had a friendly talk with him and helped him to get a profit on his goods; stop trying to sell axes at cost and trying to make it up on some other item.

Should Work Both Ways.

The trouble with some of us is, we are perfectly willing that the other fellow hold up his prices and we be allowed to sell at any old price we see fit. We should be allowed latitude because of the fact we cover more territory and sell more goods than our neighbor. In forming a local association, we are inclined to expect too much all at once. We have been fighting each other too long to reach perfect harmony on the jump. When our neighbor or competitor falls down, be just as lenient with him as you would expect him to be with you were you placed in his position.

Take a look at the manufacturers we buy from. At least fifty or a larger percentage of the goods are bought from firms or manufacturers who have their friendly meetings. Then all the more important is it that the firms distributing these goods should work in harmony with each other. You will have, say, No. 6 and No. 8 shot-loaded shells and be out No. 7 and your neighbor may be long on No. 7. You call on him, and he will be only too glad to have you come over and talk with him, and he will give you in exchange the No. 7 for the No. 6 and No. 8, and in doing this you will get on better terms.

Take poultry netting for instance. You doubtless observe that I use poultry netting to illustrate my position, and I do so with the hope that my netting may be sufficiently strong and attractive as to catch and hold in its meshes the attention of my fellow members, who are willing to be moved by the incentive of better profits and a higher integrity. Frequently your neighbor across the street or on the other side of town is long on 4-ft. netting, and you happen to have every other size in stock, but happen to be out of the 4-ft. He would be just as anxious to have you exchange with him

The GURNEY, TILDEN COMPANY, LIMITED

HAMILTON, ONT.

and swap you the size you are out of and get in exchange some of the other sizes. In doing this you can the better serve your customer, rather than keep him waiting two and sometimes three weeks for what you could get for him at no expense to yourself, simply the time it takes to call on your neighbor. He has just as big a heart as you have, and the Lord made him just as well as he made you.

Overstock and Shortages.

Seriously, gentlemen, you will serve your trade and customers better by having a local association. One of our customers may be in a shaky way and wants to owe you too much money, and your neighbor may be as good if not a better credit man than you are, and in this manner you will save money that you would possibly lose, or if your customer is worth saving, your neighbor will join hands with you and possibly save a good man, when if you were fighting each other, it would be impossible to get together on any kind of a friendly basis.

Take the item of strap hinges. You have run low on the 6-in. and have too many of the other sizes in stock to order a car, and you can only compete by ordering in car lots, and just at this time it may be that your neighbor is long on 6-in. and short on the other sizes you have, then look at the interest you will have by keeping your stock down by reason of making a friend of your competitor. If you can save money by filling in your shortage from your neighbor, why not do so? You are not in business to buy goods from factories only. If you can make money, and that is what you are in business for, unless you have all the money they want and are in business simply for the love of it, buy from your neighbor. It may be that at sometime you will want him to help you unload.

There was never a plainer proposition and a truer one than "In union there is strength," and to better illustrate this, I give you the old adage of the father's advice to his sons and he illustrated it by a bundle of switches. He had ten sons and he took a switch for each boy, bound the switches together, and called each boy separately to break the bundle. When each in his turn failed completely to break them, he then pulled out one switch and they found no trouble in breaking it, thus showing the wisdom of an undivided front.

CHECKS AS VOUCHERS.

MacNab Bros., Orillia, have an office system which might be explained at the convention for the benefit or criticism of other members. They make every cheque act as a voucher and file them away on their return from the bank. On the back of each cheque is stamped the following :—

No Receipt Necessary.

This cheque is in settlement of the following invoices. If incorrect please return :

Date	Amt. Invoice	Cash Discount	Remarks

Hardware Letter Box

Any questions on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

Plasterers' Tools.—Norbert & Lymburner Three Rivers, Que., ask for the names of firms making and dealing in plasterers' tools and supplies and issuing catalogues of same.

E. C. Atkins & Co., Hamilton,, and Henry Disston & Sons, Toronto, are makers of plasterers' trowels; W. G. Wright, Hamilton, makes cement trowels and Shurly & Dietrich, Galt, are makers of plasterers' tools and supplies.—Editor.

Soap Stone Griddle Irons.—The Collins Mfg. Co., Toronto, ask the name of makers of soap stone griddle irons.

The Pike Mfg. Co., Pike, N.H., are makers.—Editor.

Address of Magazine.—"Salesman" asks the address and subscription price of System.

Published at 151 Wabash Ave., Chicago, at $2 per year.—Editor.

Angle Iron.—J. E. Hussey, Melbourne, Ont., asks for names of manufacturers who sell angle iron and flat iron bent in circles for use in galvanized tanks.

Wheeler & Bain and the John Whitfield Co., both at Toronto, can supply these if furnished with specifications.—Editor.

WIRE DOOR MATS.

The B. Greening Wire Co., Hamilton, are calling attention to their new Interlocked Wire Bordered Door Mats. While retaining all the good points of their Standard Iron Framed Mats, they claim they have been able to greatly reduce the cost of manufacture, and now offer to the trade an article that should prove an immediate success, its low price making it a splendid seller. The mats are supplied in any desired length as they can be rolled up for shipment.

BENEFIT TO TRAVELERS.

The Commercial Travelers' Mutual Benefit Society held its annual general meeting on Saturday, Jan. 30, in the society's rooms.

The president, S. R. Wickett, presented the annual report, which showed that 176 new members joined in 1908, and $32,500 in death claims was paid out. H. Goodman, treasurer, drew attention to the fact that the investments, amounting to $55,068.97, were all firs-class and drawing good interest.

Two proposed amendments to the by-laws were considered but not adopted. The first was by E. Fielding, "That the president, vice-president, and treasurer should be elected for a two-year term instead of one." The second was by the the late C. E. Kyle, "That all the nine Toronto directors should be elected yearly in place of for three years as at present."

The vice-president, Mayor Oliver, of fered some valuable suggestions for the guidance of this year's board. Messrs. Laurie, Hector and others discussed methods for increasing the membership and limiting the number of lapses, and the members appeared satisfied with the year's work and the prospects for the future. John Burns, past president of the Commercial Travelers' Association, took his seat as a director in place of C. E. Kyle, deceased.

The officers for 1909 are: S. R. Wickett, president; Mayor Oliver, vice-president; H. Goodman, treasurer; E. M. Rowley, secretary; Richard Ivens, superintendent of agencies; Dr. Norman Allen, medical referee. Directors: John Burns, Robert Forbes, S. M. Sterling, John Gibson, W.S. B. Lawrie, A. J. Tipping, C. S. Parsons, R. G. Hector; Auditors: C. N. Sutherland, C. A., F. W. Thompson.

This society has been of incalculable benefit to the widows and orphans of commercial travelers, having since its inception in 1881, paid out to beneficiaries over $500,000, and whilst it was established for the benefit of commercial travelers, the society has extended its field and now accepts all mercantile, commercial and professional men who are able to pass a first-class medical examination, and are not engaged in any dangerous or risky business.

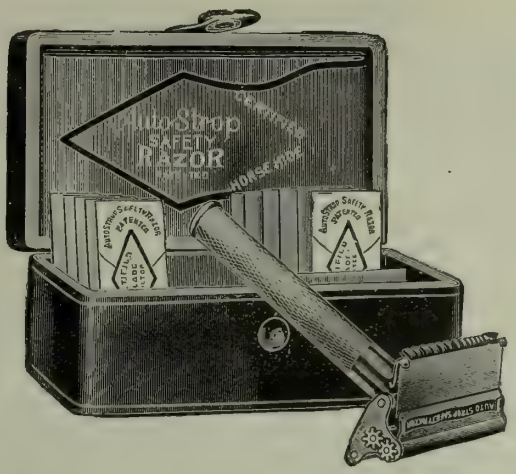
CHANGE IN UNITED FACTORIES.

The United Factories, Limited have decided to separate their Woodenware Manufacturing business at Newmarket from the brush and broom business, etc., in Toronto, London and Montreal, it having been found that their businesses can be handled more advantageously if divided and a meeting of the shareholders has been called for the purpose of getting the secessary powers to carry out the separation.

The company is doing a very large and successful business from coast to coast and employs on an average between five and six hundred work people besides a large number of salesmen and office staff. The business of Boeckh brushes and brooms, Bryan's brushes and Cane's woodenware will not be affected in any way by the division into two companies.

ACETYLENE AS A BLASTING EXPLOSIVE.

Acetylene is being used in Germany as an explosive for blasting purposes. Each cartridge contains slightly less than 2 oz. of calcium carbide, yielding about 16 qt. of acetylene. After wetting the carbide the confined mixture of generated gas and air is exploded by an electric spark. Rock, when blasted in this way, is not thrown out, but is broken up into pieces small enough to be readily removed.



A Satisfied Customer—Your Strongest Asset

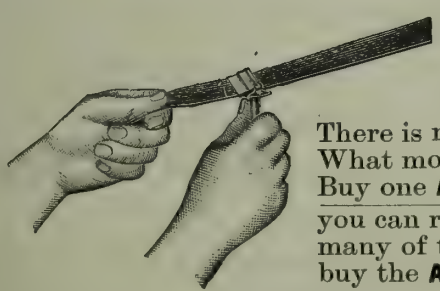
Do you believe that a customer who is compelled to come to your store at regular intervals to replenish the blades of his safety razor—not one of which has given him a perfect shave—will feel well inclined towards you who originally sold him that instrument?

How do you think that he will regard you when he finds that your competitor has a Safety Razor whose blades can be kept constantly sharp, by a simple stropping method, and you sold him one of the old fashioned kind?

To tell him that the one he bought is well known and largely advertised, will not appease his wrath. He expects you to offer him the latest, and the best of anything he may want, and not to pawn-off old fashioned goods on him.

These are intensely practical days, and rich or poor, our men hate to be "buncoed.' They want a square deal every time.

The Square Deal in Safety Razors is the AutoStrop



Twelve **AutoStrop** blades, should with care, last a lifetime.
The self-stropping device is so scientific that you can't spoil the blade if you try.
The hundredth shave is just as good as the first.
There is no taking apart to clean or strop.
What more can you want?
Buy one **AutoStrop.** Try it on your own precious cheek. If, after that, you can recommend any other razor, it will only be because you have too many of the "No-stropping" kind on your shelves. Get rid of them and buy the **AutoStrop.**

HARDWARE TRADE GOSSIP

Ontario.

Thos. P. Hogg, Thorndale, is advertising his tinsmithing business for sale.

Macpherson's Hardware Store, at Prescott, makes an annual event of a ten-day after-stock-taking sale. They are in the midst of the 1909 sale just now.

P. Douglas McLaren, manager of the Canadian Fairbanks Company, Calgary, spent a few days visiting his parents at London, recently. Mr. McLaren predicts a great year for the west.

An unusual change took place recently in Shelburne when two hardware firms shifted locations, each one to the building formerly occupied by the other. Button, Spilker & Co. have moved their hardware stock to the stand formerly occupied by J. J. Metcalfe; and J. J. Metcalfe has moved his hardware stock to the stand formerly occupied by Button, Spilker & Co.

R. A. Jelly's hardware store at Shelburne, was burglarized recently, the burglars breaking a large pane of glass in one of the front doors. They made quite a good haul—took three dozen razors, over fifty jack knives, two revolvers and a good supply of cartridges. They also pried open the counter till and got a small sum in silver and about 50 coppers. These are the only things missed. The knives had only been put on the show card in the case the day before. It is quite probable that they took a lot of other articles aad may have taken a couple of guns as the proprietor does not know how many were in stock.

Quebec.

J. H. Roper, Montreal, was in Quebec this week.

H. K. S. Hemming, Montreal, has been in New York this week on business.

T. J. Drummond, Montreal, has been elected a director of the Royal Bank of Canada.

William Robertson, of Halifax, visited the Montreal office of Hardware & Metal last week.

D. J. Munn, vice-president of Alex. McArthur & Co., Montreal, is on a business trip to New York.

S. E. Waffle, one of the Western representatives of Alex. McArthur & Co., Montreal, has been visiting headquarters.

G. A. Irwin, of Drummond, McCall & Co., Montreal, has returned from business visits to Detroit, Chicago, St. Paul, New York and Philadelphia.

H. J. Stafford has joined the travelling staff of Lewis Bros., Montreal, and will represent the firm on the South shore of the St. Lawrence, below Quebec.

C. M. Strange, sales manager of Lewis Bros., Montreal, was called home to Kingston last week on account of the death of his mother, Mrs. O. S. Strange.

Two strenuous games of hockey were played last week in connection with the Montreal Wholesale Hardware Hockey Association. The Canadian Fairbanks Company defeated Frothingham and Workman by 8 to 5 and Lewis Bros., defeated Caverhill, Learmont & Co., by 6 to 4.

The annual dinner of the Metal and Hardware Association of the Montreal Board of Trade was held at the Montreal Hunt Club on Monday. J. K. Kinghorn, of the Montreal Rolling Mills, presided over about 40 members and guests, among the latter being Farquhar Robertson, President of the Board of Trade, and F. C. Lariviere, Second Vice-President of the Chamore de Commerce.

At the annual meeting of Alex. McArthur & Co., mfrs. of paper and roofing material, Montreal, the report for the year was presented and deemed most satisfactory considering business conditions. General confidence was felt as to trade prospects, and every indication pointed to very satisfactory business. Col. C. McArthur was re-elected president; D. J. Munn, Vice-President; E. J. Rowlands, Secretary-Treasurer. The Board of Directors being reelected as follows: Col. C. McArthur, D. J. Munn, F. Robertson, C. P. Tucker, and E. J. Rowlands.

Western Canada.

The Manitoba Hardware Company, North Vancouver, have moved to new premises, No. 1407 Park Drive.

S. Schwarz, Rocanville, Sask., has returned home from a business and pleasure trip to Toronto and other eastern points.

J. T. Sheridan, J. L. Ross and D. J. McKinnon, of the Pease Foundry Co., Toronto are in Winnipeg this week, consulting with Chas. D. Waldon, manager of the Pease-Waldon Co., as to the coming year's business. They state that business prospects for their firm in the West were never better.

Maritime Provinces.

Charles E. Tisdale, a prominent hardware merchant of Vancouver, and formerly a resident of Fredericton, visited his home city last week. He is on his way home from a trip to England, and stopped off to spend Sunday and renew old acquaintances. He went to Fredericton from Birmingham, England, in the eighties, and for a time carried on a business in firearms there. He removed to British Columbia twenty-one years ago, locating at Vancouver, where he has had a very successful career in the hardware business. He is an ex-member of the British Columbia legislature, and a past president of the Board of Trade of Vancouver. Mr. Tisdale left for Montreal in company with Supt. Downie, of the C.P.R., who is an old personal friend, travelling in the superintendent's private car. Mr. Tisdale was heartily welcomed to Fredericton by many old friends.

NEW INDUSTRY AT COLLINGWOOD

The Imperial Steel & Wire Company, Collingwood, are preparing to take up the manufacture of screen doors and windows, green wire cloth, poultry netting and wire fencing. The necessary buildings and machinery will be made ready this year and manufacture commenced in time for next season's trade.

Live Hardware Dealers Everywhere

are beginning to appreciate the implement business as one that can be successfully and profitably handled in connection with their regular hardware lines.

We have a line of goods which will warrant your confidence if you have or intend to branch out along the implement line. Our goods are well and favorably known, and are kept before the agricultural community through the medium of all the leading farm papers.

We supply the following goods on consignment, freight prepaid:

Success Manure Spreaders
Walking Plows of every description
Single and Double Riding Plows for Ontario and the West
Grain Grinders
Disc and Drag Harrows

Also supply at 6 months' dating:

"Leader" Scufflers
Pulpers
Agricultural Wheelbarrows

These goods can be and are being profitably handled by many of the leading hardware men.

We solicit your inquiries and will be glad to send a traveller to talk the matter over.

MISLEADING LABELS.

Elsewhere in this issue is published a letter written by G. B. Heckel, author of "A Paint Catechism," and one of the best informed men in the paint industry in America. Mr. Heckel points a warning to the danger of the Retail Hardware Association movement in the Western States hitting their friends, the paint manufacturers, when striking a blow aimed at their enemies, the mail order houses.

In his article Mr. Heckel says, "there is no excuse except antiquity to offer for misrepresentation, false descriptions or misleading labels."

This hits a live question taken up by the Retail Hardware Association in Ontario a year ago—that of abolishing the misleading labels on white lead cans, antiquity having established the marking of a second grade lead as "No. 1."

Anything which tends to confusion and allows the price cutter or the dealer with a loose conscience to palm off second grade goods as the best quality, should, in the best interests of manufacturers as well as retailers, be corrected.

A customer goes into Smith's hardware store and asks for a certain quantity of white lead. He is asked if he wants the best and replying in the affirmative he is quoted the price on pure lead. A week later he happens into another hardware store for an additional supply and says he wants the best. "Here is No. 1," replies the sharp dealer quoting a lower price than charged by the first dealer, thus giving the customer the idea that he was overcharged on the first purchase.

Is there any valid reason why the anomaly of having No. 2 grade white lead marked "No. 1?" The request of the Retail Hardware Association seems to be a reasonable one.

SHORTENING TERMS OF CREDIT.

In keeping with the modern idea of doing business for cash the Maritime Wholesale Hardware Association, has brought forward the proposal that the terms of credit be shortened from ninety to sixty days.

A dozen years ago hardware was sold on six months time with five off 30 days. Then it was found advisable to shorten this to four months with three off and a year or so later the present terms of three months with two off were adopted. Now the suggestion is made that the United States hardware terms of sixty days with two off 30 days be adopted and the Canadian Wholesale Hardware Association may favorably consider the proposal.

Woodenware and broom manufacturers have gone even further and are charging net 30 days with one off on ten days and tinware manufacturers have reported requests for extra discounts for spot cash payments.

Some retailers accustomed to old ways of doing business may look with disfavor upon these modern innovations tending to put business upon a straight cash basis, but the most progressive retailers will not object to the wholesalers making the change as it will force the retailers who give long credit to their customers to brush up, thus making it easier for the progressive dealer to adopt the cash system.

THE TRAVELER A NECESSITY.

Mail order papers are continually throwing out slurs, aimed at traveling men. One of them recently stated "he is an expensive, useless luxury maintained at an enormous expense, merely to assist and encourage sluggish, ignorant storekeepers."

The traveling men of to-day are men of character and usefulness. They are the advance agents for improvements and new goods. They are educators whose views and conclusions are practical and based upon experience. Most of them are married and loyal to their families. They save their money and sooner or later usually embark in business. They are an economic necessity. If we had no traveling men, the dealer would have to go frequently to market; there would be the time and neglect of his business, as well as the expense of a long trip to account for.

The traveling salesman comes from the nearest town, the order is made up in the store where stock can be referred to and the advice of clerks obtained. If one merchant is making a great success of a certain line or method in another town, the traveling man knows it and speeds the information. If there is a failure or a fraud, he warns his customer who in turn can protect the public.

But why defend the traveling man, when all intelligent people to-day recognize his worth and influence. "Here's to his unbounded success. May he live long and prosper."

CUTTING PRICES HURTS ALL.

There is a common idea that a firm, wholesale or retail, can break the price of goods and take business from competitors without injuring themselves.

This is wrong, as the inevitable result of price-cutting by one firm is to force others to meet the cut, the end being loss to all and cessation of hostilities or the failure or financial crippling of one or more of the contestants.

W. H. Thorne, St. John, N.B., very truly said at a dinner to the Canadian Wholesale Hardware Association at Toronto three years ago, that price-cutting was injurious to all concerned and that a failure in any line of business has a damaging effect to all immediate competitors.

This principle is so well recognized by Canadian banks that the Bankers' Association has on several occasions gone to the assistance of weak institutions rather than have them fail and bring disaster on all.

The effect is not so apparent in mercantile failures but there is no denying the fact that price-cutting and failure have a detrimental effect upon all in the trade.

A TINSMITH DID THE TRICK.

A woman who entered a hardware store in Toronto the other day with two children had a rather awkward experience. While she was being waited on one of the children placed a granite chamber pot on his head, pulling it down over his face. When, however, he tried to remove it his best efforts were in vain. Neither mother nor clerk were any more successful. In her desperation the now weeping mother took a street car and, amid the laughter of the passengers, hurried the child off to the family doctor, but the latter, never before having had a patient of this description, also failed to remove the offending utensil. Finally a tinsmith was suggested, and he, by the aid of sundry tools, succeeded where others had failed.

WE WANT TO MEET YOU
At the Convention in Hamilton

WE, who are making the "Gillette" Safety Razor as no other razor has ever been made, want to shake hands with you who are selling the "Gillette" as no other razor has ever been sold.

It will do us good to see the "Gillette" through your eyes for a little while—to hear of your experiences in selling it—to get your suggestions for improving either the razor itself or our methods of handling it.

And perhaps we may be able to give you some useful information about the way we make the "Gillette," and why it is such a satisfactory little shaver. Or perhaps we can suggest some new ways of displaying and pushing it, and so increase your profits and our own.

We want you to see our exhibit, too, at the Waldorf.

Don't fail to look us up when you are at the convention, on the 9th, 10th or 11th, for we'll be mighty glad to see you.

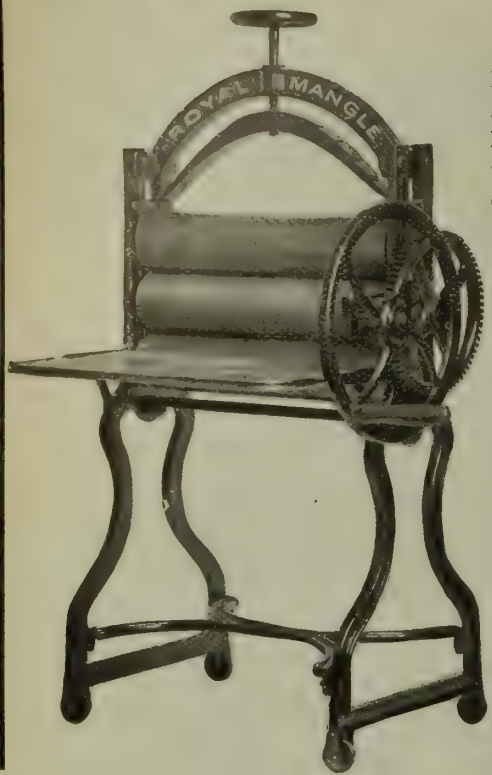
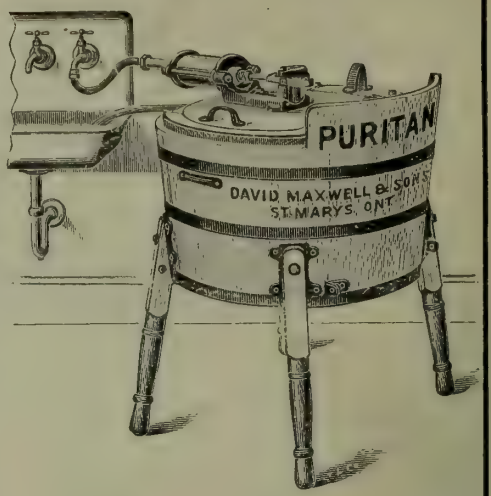
THE MAXWELL EXHIBIT

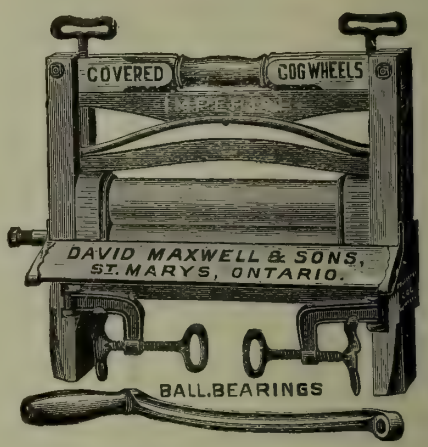


At the convention of the Ontario Retail Hardware and Stove Dealers' Association, to be held in Hamilton Feb. 9th, 10th and 11th, we are planning to show our complete line, including our new Motor Washer, our "Royal" Mangle, and other new lines, as well as the older ones used by so many throughout the country. We take this opportunity of extending to you a most cordial invitation to visit our exhibit and see for yourself the superiority of our specialties.



The **"ROYAL" MANGLE** illustrated here, is one of our leading lines. Sold in sizes suitable for home use. A great saver for ironing day.

The **PURITAN MOTOR WASHER** has all the good points of the Puritan Re-Acting hand machine, with the addition of a splendidly designed and made water motor. Works on a pressure of 35 to 40 pounds. Saves **ALL** the hard work of wash-day.



The **"BLUE BELLE" WASHER** is a new machine of the "Rubber" type. The tub revolves in one direction while the upper board turns the opposite way, making it very rapid.

The **"IMPERIAL WRINGER"** has no superior. Ball bearings—enclosed gear—best solid rubber rolls—swivel tub attachment. We also show the "Royal Canadian" Wringer.

More **"FAVOURITE" CHURNS** are sold in Canada than any other make. The "Favourite" features are easy running (ball bearings and combined hand and foot drive), easy cleaning (all parts accessible) and light, yet rigid frame.

MAXWELL WHEEL BARROWS are shown in several styles—all good.

MAXWELL LAWN-MOWERS are made of A1 material throughout, are strong, exceptionally easy running, and give satisfaction.

Don't fail to thoroughly inspect our lines at the Waldorf Hotel, during the convention.

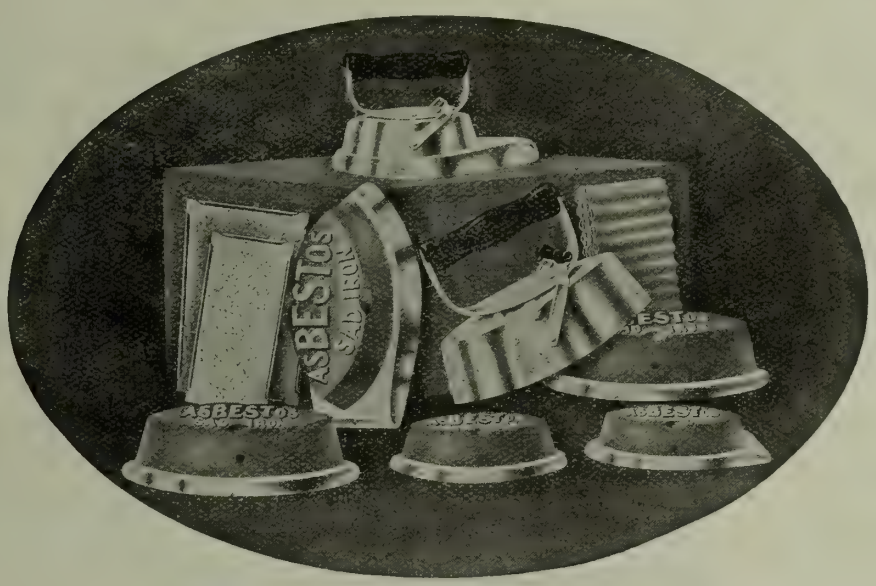
Something New In Sad Irons At Hamilton

Dealers who have taken up the sale of the No. 196 Household Set of Asbestos Sad Irons have been meeting with splendid results. This is a six-piece set—the ideal iron for each laundry need—and it not only provides the user a most convenient ironing outfit, but it pays the man who sells it a good, round profit.



In order to acquaint Canadian dealers with this "New Unit," We will have a representation at the Hamilton convention to show the Household Set and the advertising equipment which we furnish with this set. If you attend the convention, make it a point to investigate this proposition. It means larger returns for the effort you put on selling Sad Irons.

If you do not get to Hamilton, write to us for information.

MONTREAL HARDWARE MARKETS

February 5.—Trade is developing and shipments are approaching the dimensions that are expected at this time of the year. Booking ahead continues on the light side, but immediate delivery orders in spring lines are gathering strength, and it is evident that dealers are waking up to the fact that little time is to be lost now if they wish to be ready for the commencement of spring trade. Sugaring supplies are being booked, and already show greater strength than they did at this time last year. Harvest tools are improving in booking, while there is a good movement in gardeners' tools for immediate delivery. Guns and ammunition for spring shooting are also commencing to show strength.

Orders from the West are improving steadily and reports are favorable as to good trade showing all the way along. Stocks are light, and if the booking ahead has not proved so good as it might be, the general sorting orders for immediate delivery are heavier and coming in regularly. Lawn mowers are in good request. Prices generally are unchanged.

BUILDERS' HARDWARE — The stimulation noted last week continues and good movement in lock sets, bolts, and general trimmings is developing. A fine building season is anticipated all over the country, and general stocks are light; strong sorting orders should obtain from now onwards. We quote: Discounts on door sets, 50 and 10; escutcheons, 50 and 10; escutcheon pins, steel 50, brass 55. Spring hinges, per gross, No. 20, $9.

SPRING LINES—Harvest tools are showing improvement on last week, and booking is developing in forks, hoes and rakes. Sorting orders for immediate delivery in lawn mowers, hose, hose nozzles, lawn sprinklers, gardeners' tools, ice cream freezers, green wire cloth, amd poultry netting are showing greater strength, and the spring movement is now assuming more satisfactory proportions. We quote: Screen doors, stained, $7.80; grained, $8.10; poultry netting, 60 and 2½; green wire cloth, $1.70 in 100 ft. rolls.

SPORTING GOODS—Owing to the ice carnival in Montreal there is still a call on winter lines, especially in snow shoes. Outside districts are slow. Guns and ammunition for spring shooting are commencing to move. Fishing tackle is about the same strength. Other lines are quiet. We continue to quote: Dominion rim cartridges and C. B. caps, 50 and 2½ per cent.; B.B. caps, 50, 10, 2½ per cent.; Crown black powder, 18 per cent.

HOUSEHOLD UTENSILS — Steady improvement is showing in household utensils, especially those lines most used for spring cleaning purposes. Carpet sweepers are developing better strength. Wash tubs, wash boards, wringers, washing machines, brooms, pails and polishes are all moving well. We quote: Carpet sweepers, $2 and up; sad irons, Mrs. Potts', No. 55, 75c; No. 50, 80c per set; asbestos, $1.50; cake makers, $17.25 per dozen; bread makers, $18 per dozen and upwards.

LUMBERMEN'S SUPPLIES — The improvement recently noted in these lines is maintained, some good sorting up orders being received in boot calks, cant hooks and cross-cut saws. We quote: Boot calks, $4 to $4.25 per 1000; wing calks, $6.50; canthooks, $12 to $16 per dozen; axe handles, $1 upwards; axes, $6 upwards.

SUGARING SUPPLIES — Sugaring supplies are commencing to move. Orders are much stronger in sap spouts, sap pails, sap bits and sap kettles than at this time last year, and evidently a good sugaring season is anticipated. Sap bits are quoted at 50 off.

BOLTS AND NUTS—An improvement is noticed in the demand, and trade seems to be developing well. Supplies are good. We continue to quote: Discounts on carriage bolts, ⅜ and smaller, 70; machine bolts, ⅜ and less, 60, 10 and 10; coach screws, 75; stove bolts, 80 and 7½. Wire nails are still quoted at $2.30.

SCREWS—Sorting orders show better strength, all sizes being in request. There is no change in quotations. Discounts are at 85 and 10 off for flat head bright; 80 and 10 off for round head bright; 75 and 10 for flat head brass, and 70 and 10 for round head brass.

WIRE—Orders for early spring shipment continue to improve and fine trade is opening up. There is no change in quotations. Plain wire, $2.30 base; barb wire, $2.65 in straight and mixed car lots, and $2.70 in small lots. Galvanized wire, No. 9, $2.35, in straight and mixed car lots, and $2.40 small lots, f.o.b. Montreal. Coiled spring fencing, $2.65 straight and mixed car lots, and $2.75 small lots.

TORONTO HARDWARE MARKETS.

Toronto, Feb. 5.—Trading continues on the upward trend, though this past week's business is a trifle slower than the previous three weeks. Some jobbing houses are still in the midst of stock-taking, and those which are through that ordeal have not yet had time to tell what success their travelers have met in the country.

Generally speaking, city business is a little slow and Ontario trading is but little better, though a strong undertone exists that next month will see much activity. Prices are unchanged from last week, though woodenware, broom and brush manufacturers have cut down their discount lists somewhat.

A number of travelers representing U. S. manufacturing establishments are calling on the Toronto jobbing houses and the buyers are busy looking up their stock lists and filling up on necessary articles and materials. A good feeling is abroad.

SEASONABLE LINES.— The continued heavy falls of snow in various parts of the province has had the effect of lowering stocks which a short while ago gave a little anxiety to jobbers and hardwaremen. Although the orders are small and of the sorting variety enough is doing to give a satisfactory feeling to traders. Winter sporting goods, too, participate in the orders going out.

SPRING GOODS—Although spring orders are being booked the goods are for future delivery. Orders are a trifle slow coming in, but are not at all disappointing. Inquiries are frequent and these give a healthy tone to business. Bookings include goods usually sold in summer time—screen doors, lawn mowers and sprinklers. Refrigerators are being shown on all sides. 9-in. 3-wheel lawn mowers are at $3.30 to $3.37; screen doors, stained, $7.80, and grained, $8.10 base.

BUILDERS' HARDWARE — Lock sets, bolts, door sets and articles of that class in new designs and having new features are being shown by manufacturing travelers and are creating some interest. The heavier goods are not so brisk in demand as last week, but Portland cement and tarred building paper are good sellers. Cement is quoted at $1.70 per barrel f.o.b. Toronto, and heavy straw plain and tarred paper is at $37.50 a ton.

ROPE AND TWINE—The low prices of rope has stimulated inquiry and brought about not a few sales for present and future delivery. Pure manilla twine is at 11½c.

WIRE—The f.o.b. Toronto prices are for galvanized barb, $2.85, and plain twist, $3.20. Coiled spring wire continues at $2.75 for No. 9. Galvanized wire is quoted at Pittsburg, base sizes 6 to 9, $2.25. Less than car lots, 10c higher. Wire nails are unchanged at $2.30; poultry netting at 60 and 2½, and green wire cloth at $1, $6 in 100-ft. rolls.

HOUSEHOLD UTENSILS—Enamelware and tinware are again coming into the limelight and inquiries are received daily concerning food utensils, washing machines and the hundred and one articles used about the home. Lamps and lanterns still go out in sorting orders. Cold blast lanterns are at $6.75.

WOODENWARE, BROOMS AND BRUSHES—Manufacturers have altered their discount lists, and instead of being 60-day net and 30 days 1 per cent. the new terms are 30 days net and 10 days 1 per cent. Brooms generally have advanced about 25 cents a dozen, owing to the scarcity of broom corn, which last year fell into the hands of a few U.S. men, who boosted the price nearly 100 per cent. Broom buyers are chary about placing orders, thinking the price will come down, but manufacturers aver that prices are more likely to advance another 25c, and say they do not care whether orders are placed now or in the future.

HEAVY GOODS—Nails and screws are active this week, the other lines are somewhat slower. Bar iron is unchanged at $1.95. Stove bolts are 80 and 7½. Bright and steel wood screws, flat, 85 and 10, and round head 80 and 10 per cent. Brass screws are, flat 75 and 10, and round, 70 and 10.

MONTREAL METAL MARKET.

Montreal, Feb. 5.—As we anticipated last week, there has been a cut in both tin and copper owing to further weakness in the primary markets, and we now quote 31½c for tin in jobbing lots and 15c for copper. Trade is maintaining the rate of improvement noted last week. There is no marked stimulation in the demand, but the volume of business done steadily increases each week. Inquiries have somewhat dropped off owing no doubt to the weakness apparent in market quotations, although on the other hand prompt delivery sales have been encouraged. There seems to be no doubt as to good trade awaiting the encouragement of staple figures. Spelter continues firm and there is no change to announce. Lead, likewise, is steady, although the metal in the English market seems to be dropping down gradually to £13. The pig iron situation is unchanged. Prices are maintained, and furnaces are still working at good pressure. It looks as if imported pig orders would be heavy, as inquiries are numerous and prices for future delivery seem not quite so high in the Old Country.

It cannot be said that quotations in New York and London have been of such a character as to inspire much confidence at present in the trend of the metal business. Both copper and tin have been severely shaken, and figures have slumped considerably. Consumption is dull in both metals, while tin has been further weakened by the unloading of some heavy lots of metal, holders having become, apparently, tired of waiting for the market to rally. According to statistics the total visible supply of tin at the end of last month was 7,000 tons heavier than at the same month last year. This is a heavy surplus for the metal market to withstand, with consumption in its present state. However, an improved inquiry is reported in tin, and a reaction may be experienced. Heavy liquidation in the English copper market brought about a further decline in this metal, and naturally the New York market, in its present condition, had to give way in sympathy. However, producers are still making a grim fight to hold prices and figures, considering the state of the legitimate consumption, have declined very slowly. Spelter is a little weaker in the English market, but not enough to cause any apprehension. Pig iron conditions are about the same in the Old Country, and Cleveland warrants show little alteration. In the States the pig iron market is dull, and the rumors as to finished steel prices being reduced have now extended to pig iron. Prospects are declared to be more uncertain than they were, and with stocks in middle hands piling up, a certain amount of unrest is being felt.

PIG IRON—There is no change practically speaking, in the local pig iron situation. Inquiries as to imported pig are still very promising and prospects for good trade at the opening of navigation are most favorable. Canadian furnaces are reported as continuing busy, with prices well held. There is no change in imported pig iron, and we quote Middlesboro No. 3, $19.50; Summerlee No. 1, $21 to $21.50; No. 2, $20.50.

There is little change in the situation in the Old Country. Cleveland warrants are quoted at 48s. 3d., a decline of 1d. Finished steel prices are practically unchanged. The demand is fair with inquiries improving. The steel and iron markets in the States are dull, only pressing wants for material being supplied. There are reports of a weakening in pig iron prices, but no important change has yet been made. Plates, shapes, and bars continue slack, but wire is somewhat more active. Altogether the situation shows little improvement on last week.

TIN—As we anticipated tin has received a cut of ½c through the weakness in the primary markets and we now quote jobbing lots at 31½c. Trade continues to improve steadily, if slowly. Prospects look very favorable despite the cutting, and inquiries show that good business is on the verge of coming in. Tin has been badly hammered in the London market owing to poor consumption, and some heavy unloading on the part of operators who could hold out no longer against the continued sagging of the markets. Consumption is likewise poor in the States, and with the heavy supplies of metal now visible the low figures that have been ruling were only to be expected. A reaction, however, may come at any moment.

COPPER—Like tin, copper has been cut owing to weakness in the New York market, and we now give the jobbing quotation as 15c, a reduction of ½c. Trade has an improving tendency, although heavy orders are not numerous. Still a fair quantity of metal is going into consumption, and at any rate the demand is not going back. Heavy liquidation in London caused the primary markets to show a further decline. Consumption continues poor in New York, and the electrical companies do not seem anxious to come forward. Producers, despite the stagnation, continue to hold to their prices as firmly as possible, and the market only goes back after a strong fight.

SPELTER—There is no change in spelter, and we continue to quote $5.50 for jobbing lots. Trade continues steady, and inquiries are promising. The London and St. Louis markets keep firm and very little alteration has taken place for some time.

LEAD—There is no change to note in imported lead, and we continue to quote $3.70 with Trail at $3.60. The English market has shown signs of weakness again, but the decline is slow.

OLD METALS—There is no change in scrap prices. The market is slow. We quote: Heavy copper and wire 11½c; light copper, 10c; heavy red brass, 10c; light brass, 6½c; heavy lead, 2½c; wrought iron, $11; No. 1 cast, $13.50.

TORONTO METAL MARKET.

February 5.—Slowly increasing in volume, continues to be the feature of the metal trade locally. Copper is down from ¼c to ½c, and tin has declined 50 cents, owing chiefly to the slow business done in these metals a week ago. Some good sales of copper were made early this week at the low price, as many buyers expect to see an advance shortly. Other lines continue to be quoted at the old figures. In the U.S. there has been widespread cutting in steel and this to some extent has upset the market. A number of furnaces have been stacking their pig iron output, and there appears to be no organized effort to maintain prices. Scores of orders have been held up, although the steel car industry is active at the low prices. The cutting is more prevalent on sheets, plates, structural material and steel bars. The rail mills are opening up all over the country in anticipation of large railroad orders. J. J. Hill is authority for the statement that the principal reason for railroads holding back orders is because of the legislative action against the roads generally, and not only because the companies are awaiting a return of prosperity.

The steel industry as a whole in America is running at nearly 60 per cent. of capacity. Disappointment is manifested in the markets because demand lacks snap, and requirements are coming out in a hesitating way. This disappointment has led to the cutting now going on. A good sign of the future is the opening of the Gary plant and the running of all the Homestead departments on full time. In Canada the locomotive works at Montreal are running at nearly full time, although eight locomotive plants in the U.S. are closed entirely. The Dominion Iron & Steel Co. make an interesting statement when they say they can furnish steel to the world's markets at $6 cheaper than Pittsburgh.

PIG IRON—The local market is dull

and this condition appears to rule markets all over the country. Canadian prices are firm and unchanged from last week. Toronto's quotations are: Canada Foundry, $18.50; No. 3 Middlesboro, $21; and Cleveland, $22. Stocks are accumulating and this lends the view that the prices are weakening. U.S. prices are from $1 to $2 lower than a year ago, and there is scrambling there for even the smallest order. Coke is demoralized, and producers are operating but four days a week.

COPPER—The uncertainty in the primary markets last week and the few sales and small orders locally have brought about a reduction of from ¼c to ⅛c in the price of copper. The quotation is now 15c. The 50,000 order which Toronto expects to place for her electrical needs does not at all affect the local market, as it is expected the sale will be made outside. March or April will see activity in copper all over the continent if metal men close to the pulse of trade are to be relied upon; the present slowness of trade being regarded as a resting spell. Some fair sales were made this week at the low price.

TIN—This metal is dull and lower, 30c now being the local quotation, ½c below last week's figure. London reports a collapse under heavy eastern sales. Banca tin is increasing in production and labor is now more readily obtained.

LEAD—Unchanged in price from last week's quotations; imported pigs are still at $3.80. Orders are light and infrequent. Production in the U.S. during 1908 was 6 per cent. less than the previous year, and that country was forced to import from Canada.

SPELTER—Some very large business has been placed locally recently at prices unchanged from last week. The quotation remains at $5.50. The metal is yet the liveliest of all lines. The world's production for last year, although below that of 1907, was yet greater than for any other previous year.

SHEETS AND PLATES—Although there has been fluctuations of late in these lines across the border, in Canada quiet, steady conditions and trading prevail at prices which have been running unchanged from last February. The independent tin plate mills in the U.S. are now all in operation, and the trust is operating at 75 per cent. of capacity.

OLD MATERIALS.—The market is quiet and stocks continue to accumulate. While prices have weakened somewhat, the actual quotations remain at the old figures.

FUR MARKET.

Montreal, Feb. 5.—Trade maintains its high level, and the season is turning out most satisfactorily. There is no change in prices, and we quote: Mink, $5 to $6.50; marten, pale, $4 to $6; dark, $8 to $20; fox, red, $2.50 to $4.50; lynx, $5 to $12; otter, $15 to $25; fisher, $5 to $9; weasel, 25c to 35c; muskrat, 15c to 25c; Canadian coon, 75c to $1.25; skunk, 40c to $1.25; bear, large, $8 to $10; small, $3 to $5,

U. S. METAL MARKETS.

New York, February 4, 1909.

"The Iron Age," says:—Concessions from "official" prices for finished iron and steel are being more generally and more openly made, and only steel rails and tubes have escaped. This is bringing about a loss of business to those who maintain prices and is causing growing irritation. If there were any assurance that a readjustment of prices to or slightly below the level established by the cutting being done by the majority of the independent makers would lead to any increase in sales, and would turn work to the idle mills, then such readjustment would be promptly made. The other alternative would be to put prices so low that they must bring out buying, but such a course would probably run counter to the plans of great financial interests. It looks, therefore, as though the iron industry were condemned to a period of drifting, which will be charged chiefly to the pending revision of the tariff, whereas lack of demand and growing domestic competition are really the principal causes.

The markets are dull in every direction and there are hardly any trasactions to relieve the monotony. Our Chicago correspondent reports that an order for 10,000 tons of Open Hearth Rails has been placed by the Northwestern road and that specifications from the same road for 20,000 tons of Bessemer Rails, carried over from last year, will be turned out by the Illinois Steel Company. The latter company has also received specifications for 28,000 tons from the Rock Island, which in addition will probably require about 18,000 tons more. Included in prospective rail orders are 35,000 to 40,000 tons from the Baltimore & Ohio, about 40,000 tons from the St. Paul, 6,200 tons from the El Paso Southwestern, and 5,000 tons from the Great Western.

Returns from the blast furnaces received by "The Iron Age" show that capacity at work increased during January from 402,000 to 414,500 tons weekly, at which figure it stood on February 1. The January product is estimated at 1,801,000 tons, as compared with 1,741,000 tons in December, the steel companies contributing 1,118,000 tons and 1,090,000 tons, respectively.

There has been some business in copper, both for foreign shipment and for domestic requirements. The former was done down to 13½c., with sales at higher prices since then. For the home market transactions were made down to 13½c., followed by a recovery to 13⅝c. The feeling is gaining ground that the metal will have to work out its own salvation. The interests which last year made sacrifices by closing down their mines appear to have had quite enough with one experience in "holding the umbrella."

U. S. IRON TRADE.

Cleveland, O., Feb. 4.—"The Iron Trade Review says: Viewed from the standpoint of present sentiment, the month of January has proved a distinct disappointment in the iron and steel industry. The gain in mill orders which was confidently expected to come early after the beginning of the new year has not made its appearance. On the contrary, the aggregate volume of entries made upon mill books by some steel companies has shown a decrease. Generally, however, the situation may be stated that while no forward motion of the industry is to be noted, none of the past improvement has been lost, and the less hopeful tone characterising the market seems to have resulted from the failure of actual conditions to measure up, to anticipations.

The past month has not been without its progressive features. The heavier lines, such as rails and semi-finished steel, which the mills count for tonnage have displayed more activity and substantial increases of output have been made. This has resulted in part from the prompt manner in which the Pennsylvania Railroad has specified against its recent rail contract, and by a heavier consumption by the miscellaneous users of light and standard rails, billets and steel bars. Although there is a backwardness to the final closing of rail contracts by the steam lines, the buying of steel cars continues, the Pennsylvania lines west having awarded during the past week 2,200 and the Chesapeke and Ohio 500 cars.

The disturbing factors in the market continue the current shading of finished material prices by some independent interests, which is apparently increasing, and the doubt engendered in the minds of buyers as to the extent of the revision of the tariff and its consequent effect upon the market.

Catalogues and Booklets

Manufacturers or jobbers sending printed matter for review, should draw attention to the new lines listed; and retailers sending for catalogues or other matter, should write on their regular printed letterhead and mention this paper to make clear that they are in the trade.

The Story of Rope.—The Plymouth Cordage Co., of North Plymouth Mass., and Welland, Ont., is issuing a series of bulletins under the title "Plymouth Products," giving information concerning the company and its products which should prove interesting to all rope buyers. The last number to hand, No. 6, contains the beginning of the story of rope and takes one down through the ages from the time when strips of hide and bark, and pliant reeds and rushes were used as cords. The ropes used by Egyptians, Peruvians and the North American Indians, are treated of, and special notice is made of the use of rope by fishermen in the early days. A short article entitled "Pure Merchandise," gives some thoughts to the rope buyer and emphasizes the point that buyers should be as particular about getting pure rope as pure paint or pure food. Longfellow's poem "The Ropewalker," is used in place of an introduction.

Lawn Goods.—Lewis Bros., Montreal, have sent out to the trade an attractive catalogue advertising lawn goods. This book is one of the largest catalogues ever sent out advertising one line of hardware. Any dealer who would like to receive one can do so by dropping a line to the firm.

Trade News From Atlantic to Pacific

Eastern Canada

New Buildings at St. John—Railway Construction Work—Woodstock, N.B., May Secure New Industry.

HALIFAX.

February 3.—The heavy fall of snow throughout the Province during the past week has caused quite a boom to business, and nearly all lines of trade have been benefited thereby. The country roads are now in better condition and traveling has increased greatly. The lumbering industry which so badly needed snow is now at its height, and all the saw mills are in full swing.

The ladies in charge of the Convent of the Sacred Heart, on Spring Garden Road, have just awarded a $30,000 contract to Faulkner & McDonald, for an addition to that educational institution. The building operations will start in April, and the contract will be completed by October. The addition will be three storeys, with basement. The foundation walls and trimmings will be of granite, and the building will have a French slated roof. The first floor will have five class rooms of thirty feet each. The second floor will have a large assembly hall with stage. The third floor will be used for bed rooms. The extension will be electric lighted throughout, and will be heated with hot water.

The firm of Bruce, Stewart & Co., Charlottetown, P.E.I., is putting together fifty gas engines. These engines were all cast and milled by the firm.

ST. JOHN.

Feb. 3.—Now that stock-taking time is over merchants are looking forward to an improvement in business during the present year. The past year was fairly successful though there was a tendency toward "light buying" and in consequence stocks are in good shape. Building operations during the past year were somewhat below the mark, though the figures are not yet available, the building inspector not having made his report as yet. The present year is likely to be a fairly busy one as a number of new buildings are being talked of. One of the projects now under consideration is the building of a bridge across the harbor at an estimated cost of three quarters of a million dollars. Plans are now being prepared by F. W. Holt, C.E., and the Dominion and Federal Governments are expected to co-operate with the city in the undertaking.

Tenders are being called for the erection of a new school house at Centreville, to cost $7,000. They are to be in by Feb. 8. New residences are to be built in Sussex for W. D. Turner and H. A. White.

The aldermen are considering the question of making extensive changes in the City Hall or of building a new structure. A committee has been appointed to look into the matter.

The council of the Board of Trade of Fredericton have appointed a committee to prepare resolutions urging the construction of a line of railway from Fredericton to Woodstock and also the extension of the Central Railway from Minto to Fredericton. The Board also endorsed a proposal to extend the York and Carleton Railway from Ryan to Nappadoggan Lake to connect with the Transcontinental. They will urge that the Provincial Government grant a subsidy.

Winter has not stopped work on the G.T.P. railway construction in this province. With the exception of a mile or two, the right of way for 255 miles through New Brunswick has been cleared, much grading has been done and several long sections of track laid. An average of 3,960 men and 653 horses have been employed the last two months.

Robert Richardi, of Arnprior, Ont., has been in Woodstock looking into the matter of establishing a factory there for the manufacturing of clothespins. The idea is to purchase a mill now operated by James Carr and to install new machinery. The Town Council and Board of Trade are looking into the proposition.—W. E. H.

Province of Ontario

Chatham Firm Pushing Pianos as a Side Line—News of Brantford and London Industries—Death of Two Prominent Hardwaremen at Ottawa.

OTTAWA.

Feb. 3.—The Ottawa Paint Works have moved into their new building on Wellington St. and are installing the most modern paint machinery to enable them to successfully cope with their increasing trade. The new premises are large, well planned and fireproof. This industry is a credit to the capital having grown from a small beginning to its present importance. Its trade at present is chiefly centered in the district known as the Ottawa Valley.

Tenders are being called for the construction of a complete reinforced concrete grand stand for the exhibition grounds. Tenders will be received by the Secretary of the Exhibition Association.

Trade for this season of the year is considered very good, as these are usually the slack months of the year and merchants endeavor to create business by making special sales. However, there are not so many of these as formerly.

Ottawa suffered the loss of two prominent hardware men last week, when death summoned William Graham and C. A. Butterworth.

William Graham was one of the pioneers in the hardware business in the city and for several years was employed by the Mann hardware firm which at one time occupied the premises now under possession by Granes Bros. Later he was employed by Geo. Hay and then, twenty years ago, he launched forth into business for himself. He was well-known among the hardware people and characterized as a man of sterling integrity and progressiveness. The deceased was but fifty-seven years of age and leaves to mourn him, besides a widow and one daughter, three sons, Ernest, Claude and Cyril. The funeral took place Monday afternoon and was attended by a large number of the Capital's representative business men.

The late C. A. Butterworth was vice-president of the Butterworth Company and one of the best known business men in the Capital. He was born at Port Hawkesbury, Cape Breton and came to Ottawa when seven years old. His first position in commercial life was as clerk in Crosby & Company's boot and shoe store, and later he became book-keeper for Meadows & Company, hardware merchants. In 1874 he entered into partnership with his two brothers, John J., and Enoch B., on Wellington St. John Butterworth retired after a time, later entering the coal business and the other two brothers continued in the hardware business up to the time of the decease of Charles Butterworth. The deceased in his younger days belonged to the 43rd Regiment and was a Fenian Raid Veteran. He also was a member of the Masonic Order. The funeral, which took place on Monday morning, was largely attended by Ottawa's leading citizens, who paid their last tribute of respect to one prominent in commercial life.—G. E. M. H.

HAMILTON.

February 3.—Mrs. Minnie C. Wright, executrix of the estate of E. T. Wright, has issued a writ against Harry G. Wright, to have the courts define the partnership interests in the firm of E. T. Wright & Company, a dispute having arisen over these interests since the death of Edward T. Wright.

The Canadian Road Machine Company, of Hamilton, has been incorporated with a capital of $60,000.

The will of H. P. Coburn, formerly president and general manager of the Sawyer, Massey Company, has been entered for probate. He left $164,292.27. The succession duties will amount to

$4,920. Of the total estate $142,000 is left to his widow, and the balance is divided among the family.

The Dowswell Manufacturing Company, manufacturers of washers and other woodenware, are contemplating an extension to their factory. A decision has not been arrived at in the matter yet, but if the company decides to go ahead the addition will be a substantial one.

The Board of Education expects to build additions to two or three schools this year. The Separate School Board will make alterations to its schools at an estimated expenditure of $4,000.

Benjamin Broughton, John S. Broughton and Joseph Wheeler, formerly of the Hamilton Stamp & Stencil Company, are among the incorporators of the Superior Manufacturing Company, of Toronto, which will also manufacture stamps and stencils.

Trouble was threatened last week between the stove manufacturers and the molders over the old question of wages. However, it is understood that the matter has been patched up temporarily, at least. A quiet season is looked forward to in labor circles in this city, agreements having already been made by the bosses with the various unions. This should prove an encouragement to business.—D. L.

BRANTFORD.

February 3.—A. G. Riley, president of the McCaskey Register Company, of Canton, Ohio, was in the city on Friday last. This firm have decided to locate a branch factory in Canada, and a delegation are now looking for the best site procurable. In order to protect their patents, temporary quarters have been secured in Hamilton, but they have not decided to locate there. The president is a Brantford boy, and hopes to see it located here.

E. J. Taylor, a member of West, Taylor, Bickle Co., Norwich, manufacturers of brooms, has withdrawn from the partnership and will manufacture these articles in Montreal.

The shareholders of the Brantford Roofing Co. held their annual general meeting on Tuesday afternoon, at the office of the company. A large number of the shareholders were present. The directors' report and financial statements were submitted, giving the shareholders full information in regard to the business. The usual dividend was declared. It is proposed to proceed at once with the erection of an additional storage room, which will provide much greater facilities for the handling of their increasing business. Considering the general decline in trade of the past season, the reports were considered very satisfactory. The Board of Directors were re-elected.

The Dominion Telephone Mfg. Co., Waterford, has placed an order for 200,000 sand lime bricks with Schultz Bros., of this city. They intend erecting an addition to their present plant.

F. B. Gourlay, of St. Catharines, has opened up a plumbing shop on East Street, Welland, and has installed a complete line of heating and gas fittings.

Merritton has installed a new electric lighting system in the village. The plant is owned by the municipality, and as they have contracted for Niagara power, are in a position to offer power at a low rate to those wishing to locate factories there.—A.W.

LONDON.

February 2.—George White & Sons have decided to extend their plant on Cabell Avenue, provided they can purchase property adjoining their premises. The firm has built a large factory on Cabell Avenue, south of the Grand Trunk, and the building is now used as the woodworking department. The intention is to remove at least one department to the east end each year, as the firm is cramped for space in its downtown factory.

The Globe Casket Company, whose works were recently destroyed by fire, will remain in this city, the City Council having agreed to give the company exemption from all taxes, except school rates and local improvement charges, for a term of twenty years.

Only two other manufacturing firms are now enjoying exemption—the McClary Mfg. Co. and the White Engine Works. These firms entail a total exemption in money of $190,000, but both will have reached the end of their exemption in three years' time. The engine works property is assessed at $39,690, but has exemption which results in a fixed assessment of $17,000. The McClarys have a proportionate concession, although theirs is based on the new large foundry at Chelsea Green. The assessment is $317,400, on which sum, however, they pay taxes for but $150,000, making a total exemption of $167,400.

The City Council has decided to get after new industries, and with that object in view last evening, adopted a resolution to seek legislation empowering it to submit a debenture by-law authorizing the expenditure of $100,000 on free sites and to acquire such other advantages as will induce industries to locate in London.

The Hobbs Manufacturing Company will shortly rebuild the glass works which were destroyed by fire some time ago. The company owns the land from its offices on the north side of the Grand Trunk tracks through to York Street, with the exception of the corner, which is occupied by the Campbell homestead. If this corner can be secured the new building will be the largest one-storey structure in the city.—F. T. Y.

CHATHAM.

February 2.—This week, following Saturday's big snow storm, the hardware trade has felt the revivifying effect which comes of good sleighing and fairly passable roads. Business, which was pretty quiet the last week or two of January, livened up remarkably. With several weeks of cold weather and good sleighing, February would be a banner month.

Hardwaremen have been taking advantage of the quiet season to start in with their stock taking. They have also put in some pretty attractive windows. Peter Cunningham put in one last Friday that packed the sidewalk in front of his store on Saturday, even though the window was partly frosted and a small sized blizzard was raging. The display comprised the Oldest Citizen astride the frame of a Velox grindstone, and working the machinery with all his might. The pioneer dressed in common garb of uncertain color and with a pair of glasses on his nose, was, of course, a dummy, pieced together by the "boys" during odd moments, the mechanism being worked by wires further back in the store. The grindstone and its occupant were surrounded by a display of wrenches, hammers, etc., while the outer side of the stone bore a circular card with the inscription, "We are grinding out bargains for you." One caller wanted to know who the old gentleman (that wasn't the exact word he used) was, and threatened him with actual violence when he desisted from running the stone. Mr. Cunningham also relates that one evening about 10 o'clock when the boys had the old gentleman lying stretched out in the back of the shop an alert member of the local police force, glimpsing the performance through the window, forced an entrance, querying breathlessly: "What are you doing here, boys? What have you got here?" The gentleman when in operation has an aspect of enticing reality, and this variation from the "still life" so common in window displays has made a hit.

A rather attractive feature in J. C. Wanless' window this week is a crosscut saw. The window is devoted to blankets, axes, lanterns and other articles handy for the woodsman; and the centrepiece is a cross-section of a log, sawed into a few inches with the crosscut saw still in the cut. About the log is sprinkled a generous supply of sawdust, which gives the display an added touch of reality.

Jules Perrott, of Geo. Stephens & Douglas, has been out in the country of late, looking after prospects. The firm are steadily booming the Mason & Risch piano as a side line, a display occupying a generous share of their window space.

All the local hardware men are now in the thick of the letter box business, following the installation of free delivery, and letter boxes are a feature of most window displays. The street vendors' early prices of $1.15 and thereabouts have dropped miraculously to 35c and 50c. There is a steady demand, and this will continue until practically the whole city is supplied; an event which, as may be seen by a walk down any street, is still distant. One hardware man stated this afternoon that in his first 8 years here he didn't sell more than half a dozen letter boxes. Though it is only a couple of weeks since free delivery has been started, he has already sold in the neighborhood of a gross and a half.

M. McGuire, of Dresden, has sold his machinery and carriage business to Jas. McGregor.

John Carver, of Stephens & Douglas, is around again after a week's illness. —W.E.P.

British Columbia

Canadian Northern to Build to Vancouver—Revelstoke to Have Sewerage System—Tin Smelter to be Erected Near Victoria.

VANCOUVER.

Jan. 30.—Conditions in the lumber industry are improving gradually and following the supply of logs becoming slowly scarcer the prices of lumber may go up. It is stated that some advances have been made, but this is not official, the B.C. Lumber and Shingle Manufacturers' Association, which controls the list, knowing nothing about it. Still for some months past dealers have been charging what they can get without any reference to the agreed-upon schedule, and it may be that some are now forced to charge more, since logs are firmer.

The opening of the Legislature has not yet been productive of a great deal, since the debate on the address in reply to the speech from the throne is now in progress. The opening of the Legislature, however, has brought D. D. Mann, of the Canadian Northern to the coast, and the announcement has been made that the Canadian Northern will build to Vancouver, coming south via Lytton or Kamloops. This will make greater activity in those business circles which supply the materials for railway construction. This summer promises to be a busy one. The G.T.P. is going ahead in the North, the Great Northern in the middle interior, D. C. Corbin's line in the far eastern portion of the province, and the extensions of the B. C. Electric Railway on the coast.

The permits for the last week issued by the Building Inspector totalled a value of $95,410. Among these was one for $20,000, for a brick factory for the Empress Manufacturing Company; one for $10,500, frame church for the Fairview Methodist Church; one for $1,000, for a frame workshop for the Hoffer Motor Boat Co.; and one for $22,000 for a brick veneer apartment house for J. J. Banfield.

John Hendry, president of the B. B. Mills Timber and Trading Company and head of the Stave Lake Power Co., has placed an order with the Vancouver Shipyards for a motor launch to cost $15,000. This will be the finest on the coast. The designer is Alfred J. C. Robertson, of North Vancouver, who while in Montreal, after coming out from Scotland, designed the Dorval.

Steel for the large new building on the site of the Arcade in the centre of Vancouver has been ordered, and the first shipment will soon be on the way. Demolition of the structures now on the ground is expected to start on March 1st, and every effort will be made to get up the sky-scraper as soon as possible. This will make an imposing corner, as Hon. F. Carter-Cotton's large building, now under construction, will be on a corner diagonally opposite, with the courthouse and Flack Block also opposite.

Adjoining the new post office, which will be ready for occupancy in a couple of months is the steel and concrete and stone structure, of corresponding architecture, being erected by R. V. Winch. On the opposite corner from this will be the large hotel building previously mentioned, so that downtown Vancouver will soon have some very noticeable improvements.

Twenty carloads of machinery have been received for the new plant of the Nicholas Chemical Company, now under construction near Barnet, on Burrard Inlet. C. W. Nichols, president, before leaving for New York, stated that the plant will be in operation in two or three months. The raw material will be imported from Japan.

The last of the machinery for the Western Explosives, whose factory will be on Bowen Island, has arrived, and when placed in position manufacturing will begin.

The Mosler Safe Company has opened an office at 139 Water St. The manager here will be Weldy Clark, known in Winnipeg and Toronto as a good lacrosse player.

The Paterson Manufacturing Company, which has branches in Montreal, Winnipeg and Toronto, is erecting a warehouse in this city, and has purchased an entire block in Fairview where operations will be conducted.

NEW WESTMINSTER.

Jan. 30.—The Schaake Machine Works, of this city, has completed its first consignment of twenty Johnston shingle machines which were ordered by the Davidson Ward Lumber Company for its mill at Loughborough Inlet. The machines will be installed under the superintendence of Mr. Whitney, of the Whitney Engineering Company, of Tacoma.

KELOWNA.

Jan. 30.—Additional machinery is being installed by the Kelowna Saw Mill Company so as to manufacture boxes for packing fruit in. This part of the plant will be ready for this season's trade. A new planer and conveyor are also being put in the sawmill.

REVELSTOKE.

Jan. 30.—Col. Tracy, of Vancouver, has completed the plans for a new sewerage system for this city, which will cost $100,000. Only the central portion will be constructed at present, the others to be installed as necessity may require.

Mr. Chapman, of the Canadian General Electric Company, of Toronto, has installed a gas producer in Revelstoke, The test trial proved very satisfactory.

FERNIE.

Bean Bros. have completed their new machine shop, the whole plant being designed with a view to enlarging in the future, the power plant and furnaces being double the present requirements. The main building is 40x30 feet, two stories high, and the moulding room 30x60 feet, all of concrete. The machine shop occupies the lower floor of the main building and is supplied with a 36-inch planer and 9-foot bed, a 42-inch lathe with 16-foot bed, a 24-inch lathe with 14-foot bed, and a 12-foot lathe with 19-foot bed, besides a drill press. Motive power and heat are supplied by steam.—R. B. B.

VICTORIA.

January 28.—Hardware trade in Victoria is, at the present time, pretty good, and the outlook for the near future is very bright; there is a good healthy feeling about, and everyone is optimistic. There are indications of a great deal of building for the next few months.

A tin smelter in the immediate neighborhood of Victoria will be the next development work on Vancouver Island. This will be built by the Pacific Tin Mining & Smelting Co., a local concern which was incorporated on Jan. 14th of this year, and means to commence work at once. While it will be a few miles from town, it will be so near that all trade will be tributary and will mean much to the city.

The following firms tendered for castings, etc., for Victoria:—Victoria Machinery Depot, B.C. Foundry & Engine Works, Adams & Parsons. The Victoria Machinery Depot were awarded the contract as lowest tenderers. Contract for fire hydrants was awarded to Hutchinson Bros.

Sealed tenders properly indorsed will be received by the Minister of Public Works at Victoria, B.C., for the erection and completion of a bridge across the Columbia River. Tenders are also being called by the Provincial Government at Victoria for wrought and cast iron, per pound, for all the iron work for the above bridge.

By the introduction of new and thoroughly up to date cars, and an extensive addition to and re-arrangement of its car tracks, the B.C. Electric Railway Co. will soon start upon a work involving the expenditure of $100,000 in this city. Six new cars have been ordered of the style termed the Detroit platform car, and will be forty-five feet in length. The motors will be the 440 horse-power type, and each car will be fitted with air brakes. The company are to put in several loops in their present tracks, made necessary by the introduction of the larger cars.

Thos. G. Dexter, general manager and buyer for H. S. Howland, Sons & Co., Toronto, is in town this week. It is 17 years ago since Mr. Dexter was in Victoria, and he has found a great many changes and great development, both here and at all points on his trip west.

Mr. Dexter found the trade outlook for 1909 very bright, especially so in the Northwest. Mr. Dexter met several old acquaintances while in Victoria. —W.B.C.

Laws Governing Trade in British Columbia

Unless License is Taken Out Joint Stock Companies Have No Legal Status and Contracts Are Null and Void.

A matter of great importance to joint stock companies doing business in British Columbia, especially where contracts of sale are entered into, is that unless an extra provincial organization has registered and taken out a license, upon the commencement of its operations in the Pacific coast province, it has no legal status. It is, therefore, not safe as one manufacturer expressed it "to do business there, unless you have first registered and paid the interprovincial tax."

A case recently tried goes to prove that a company transacting business was non-suited by the Supreme Court of British Columbia when action was entered to collect, on the ground that the outside concern had not registered and taken out a license. Extra provincial companies, no matter if they have a federal charter and are licensed to do business in all parts of Canada cannot, it seems, live up to the full privilege and powers accorded them when it comes to securing orders in the far western province; and the regulation now in force would appear contrary to the spirit and intent of confederation itself. If outside corporations do not register and take out a license in British Columbia, the Court of Appeal of that province declares that any contract, even if made through correspondence, is not enforceable. Why should the law apply to mail orders is the query? Surely it is exacting enough in its application to joint stock companies selling goods by travellers, resident agent or branch office.

Here are the fees—Where the nominal capital does not exceed $10,000 a fee of $25. For every $5,000 of nominal capital, or part of $5,000, after the first ten thousand and up to twenty-five thousand, $5. For every $5,000 of nominal capital, or part of $5,000, after the first twenty-five thousand up to five hundred thousand, $2.50; for every $5,000 of nominal capital, or part of $5,000, after the first five hundred thousand, $1.25. It can easily be seen what it costs to obtain a license. The smallest capital of any incorporated organization doing business in the west would probably be about $40,000, and the highest from $100,000 to $250,000, and in a few instances the capital stock might reach half a million or a million dollars. It would cost the firm with $40,000 capital $47.50 to secure the collection of even a five or ten dollar account; or in other words, they would have to pay this to register and take out a license, without which they could not legally proceed to make clients or customers live up to the letter or spirit of any contract. A business concern capitalized at $100,000 would have to pay $77.50 for a license, and one at $250,000 to hand over $152.50 to the province.

No Connection With Travelers' Tax.

This tax, it may be explained, has nothing to do with a traveller's tax, the two sometimes being confounded. The only travellers required to take out a license are non-resident representatives, selling or taking orders for liquor or tobacco to be imported. The license fee is $100 for six months and $200 for one year. Practically the same fees are levied in Saskatchewan, Alberta and Manitoba, and it may be added that no license is required in the West for the sale of goods except liquors and tobacco.

The regulation affecting outside or extra provincial corporations is the one to which serious objection is being taken, and to which the attention of many manufacturers has of late been drawn by those, who have had unfortunate experiences. In plain language, the act means that foreign chartered corporations may do business in British Columbia without registering and securing a license, but they are doing so at a risk—the danger of not being able to uphold their rights or make collections, in the event of dispute or quibble, unless the courts are shown that a license had been taken out.

It may be asked why did British Columbia pass such an act? Probably, because the legislative body of that province knew that eastern firms were all anxious to secure trade and build up a connection in the flourishing west. Realizing that comparatively few houses had branch establishments, the provincial authorities evidently thought they might as well augment the revenue and have a generous slice of what was going.

A prominent Toronto manufacturer stated that he believed, if an incorporated company seeking to make recovery of moneys due for delivered goods, was non-suited by the Supreme Court of British Columbia simply on the ground of neglect of registration, the company could, on appeal to a higher court, have the law declared ultra vires and the regulation repealed. So far no firm has fought the matter to a finish. Wholesalers and manufacturers want to know exactly where they stand, and if all contracts are null and void through neglect of registration, the Dominion Government should disallow such an act which, to say the least, is evidently selfish, discriminating and contrary to a national spirit of expansion.

Toronto Firms Interviewed.

The Kemp M'fg. Co., Toronto, when interviewed, said they had a resident agent in Vancouver, but had not registered in that province. A representative of the company remarked that, it did not seem good law that a contract of sale could be set aside on such a flimsy pretext. It was not safe for any company to do business there and expect payment for goods sold without first registering and taking out a license.

The Macdonald M'fg. Co., Toronto, said that certain terms of a contract, which they had with a customer in British Columbia, were disputed. As the amount involved was small the company decided that they would not go on with the suit as they had not taken out a provincial license. To do so would cost considerably more than the contested amount. It was strange that an account could not be collected unless an outside firm had secured a provincial license and that without this joint stock companies had no legal status.

Alfred Zephcott, president of the Dominion Paper Box Co., is one who has personally suffered through another company, in which he is interested, being about to enter action to enforce what they considered their rights. They were, however, told by their solicitor that, as the organization had failed to register in British Columbia when beginning business there, they would be non-suited. The legal gentleman cited previous cases of a similar character which had been tried. The judgment delivered had stood and would likely stand until carried by litigants to the Privy Council and set aside. "We therefore decided," said Mr. Jephcott, "not to proceed with the case." "It is not the duty of any one incorporated firm," he added, "to act as pioneer in this matter and bear the expense of conducting a campaign on behalf of all the others interested, in order to test the constitutionality of the act. The Canadian Manufacturers' Association is the body to take up this matter, and present the injustice and narrowness of the regulation to the federal authorities who I believe, would promptly declare such an enactment ultra vires. Personally, I do not see how it can stand for one minute, if put to the test, that a provincial legislator can frame such an act and a provincial court put such a construction upon it. In my judgment, and in that of many others, the measure is in contravention of trade and commerce. The whole matter should be pressed home at Ottawa, without delay."

Hardwaremen Bigger Than Their Business

The Fourth of a Series of Articles Tells of a Saskatoon Merchant Who Besides Conducting Two Hardware Stores and a 960-Acre Farm finds Time to Serve His City as Chief Magistrate.

In every province of the Dominion merchants are to be found who, while carrying on an extensive business, have found time to devote to civic matters, or have helped in some way to develop the community in which they live apart from the store. Perhaps no business in the commercial world needs more attention than does the hardware business, and yet how often one sees the successful hardwareman taking an active part in the government of the city and occupying the position of chief magistrate. It takes a man with unlimited capacity to be a successful business man, and this perhaps is the reason why one frequently sees a hardwareman elected to the highest office in which it is the people's power to place him.

Like many more hardwaremen in the West, Mayor William Hopkins, of Saskatoon, has proved bigger in many respects than his business. While keeping a watchful eye on his store in the city he fills the office of mayor, has a branch store at Tessier under his direction and personally supervises operations on his 960-acre farm in the wheat-growing Goose Lake district.

Mr. Hopkins came west from Hanover, Ont., in 1882. His father, who for 21 years was reeve of the Township of Bentick, in the Township of Grey, ran for member of Parliament, but was defeated.

Before coming to Saskatoon, Mr. Hopkins spent a number of years in several Manitoba towns and conducted a general store business in Lauder and Hartney. Three years ago he located at Saskatoon, occupying the same premises in which he now conducts his business. Having confidence in the future of the city he located on the west side, and for a time had no opposition. Having an open field he put in a stock of straight hardware, with tinshop in connection. Since that time the business has had a wonderful expansion. Not only did the community grow rapidly, but he held sway with the farmers to the southwest who patronized his store. The stock had to be increased and the premises enlarged accordingly.

Mr. Hopkins believes in up-to-date methods in business and endeavors to make his store as attractive as possible to his patrons. Behind the counter, where the shelf goods are stocked, doors covered with green baize have been hung. On the outside of these doors samples have been fastened, in an artistic manner of the goods kept on the shelves behind. In this way the goods are easily located and customers can see at a glance what their requirements are.

Having an efficient staff of clerks, Mayor Hopkins is able to devote all the necessary time to the affairs connected with his civic office. He makes a point of being in the mayor's office every forenoon from ten to twelve o'clock to transact any matter of business which needs his attention. The weekly meetings of the council are held on Wednesday night, while there are frequent committee meetings. For two and a half years, since the time the city was incorporated, Mr. Hopkins held a seat at the council board as an alderman. Besides meeting the requirements of Ward Two, which he represented, he was considered an all-round progressive man in the interests of the whole city. During his term as alderman he gained the confidence of the people, who last December elected him by a good majority to the office of mayor.

MAYOR W. HOPKINS, SASKATOON.

Seeing another good field open for a hardware business, Mr. Hopkins a few months ago purchased a site in the Township of Tessier, built a store and put in a stock. This branch store is in the capable management of E. Garvie.

Mr. Hopkins' farm, which is in the heart of the hard wheat belt, is all under cultivation, the principal products being wheat and oats. The mayor usually spends several weeks on it during seeding and harvest, thus he claims the triple title of farmer, hardwareman and mayor.

D. G. R.

ALUMINUM 20 YEARS OLD.

Aluminum was the subject of a paper read before the Institute of Metals in conference at Birmingham, England, by J. T .W. Echevarri who said that 20 years ago the metal would have cost over $16,000 per ton, and now it can be obtained at $500 to $325 per ton. Its properties of lightness, good electrical conductivity and freedom from tarnishing, combined with its non-poisonous nature and its insolubility in weaker organic acids has rendered it particularly valuable. It is now formed into cooking utensils, is made into parts of motor cars, into parts of textile machinery, into toilet and fancy articles, into coverings for walls and ceilings, and it is used for electrical purposes.

LEVELING AN OILSTONE.

A handy method of quickly reducing parts of a stone which stands too high or improving the form of a worn slip is to scrape it with the edge of a piece of glass, used in the same way as a steel scraper is used on wood. A piece of glass can always be obtained when perhaps the ordinary methods of rubbing down are not available or would take too much time. The stone can be scraped in this way either with or without water. Without water is perhaps the best, as it is then easier to see how much is being removed. If one end or one corner of the stone stands higher than the rest it is easier to reduce to a general level in this way than by the ordinary methods, which make the surface flat, but cannot easily remove a slope to one end or one side, says a writer in a recent issue of the Patternmaker. A slight inclination in any direction causes the oil to run off the stone, and it is advisable, therefore, always to leave the stone slightly hollow so that the oil will tend to run to the middle when it is left standing.

The greatest wear occurs not in the midde of a stone, but near the ends, at the places where the movement of the tool is reversed. It is therefore chiefly a small area at the extreme ends which requires scraping down, and sometimes a little in the middle and along the sides, to take some of the hollowness out.

When the stone is reduced in depth the edges of the case and cover may be scraped and a few shavings planed off, and the stone and case may thus in a few minutes be made as clean as if it were new.

MANUFACTURE OF TINFOIL.

Tinfoil, so extensively used for wrapping tobacco, certain food products, and other articles of commerce, is a combination of lead with a thin coating of tin on each side. A tin pipe is made of a thickness proportionate to its diameter, and this pipe is filled with molten lead and rolled or beaten to the thinness required. In this process the tin coating spreads simultaneously with the spreading of the lead core, and continuously maintains a thin, even coating of tin on each side of the centre sheet of lead.

WESTERN CANADA HARDWARE MARKETS

Corrected by telegraph up to 12 noon Friday, Room 511, Union Bank Bldg, Winnipeg.

Winnipeg, Feb. 3.—The most important event, commercially, of the week was the final decision handed out by the Premiers of the three Provinces of Manitoba, Saskatchewan and Alberta, on the question of provincial Government ownership of interior elevators. The decision was made public on the 30th instant, and it has been awaited with no little interest and anxiety. The Grain Growers Associations that had called for this very radical change in the handling of the chief industry of the West seemed very confident that their demands would be acceded to in a measure at least, but they were doomed to disappointment. It is whispered that not a few of the line elevator companies that are finding little profit in their houses were somewhat disappointed also.

In brief, the decision was an emphatic refusal of the demands of the grain growers, based, of course, on constitutional grounds. The Premiers declined to act in accordance with the wishes of the grain growers on the grounds that they deemed it necessary to secure an absolute monopoly of the grain trade in order to insure the success of such a great governmental undertaking, involving the estimated expenditure of from seven to ten million dollars. To create such a monopoly would be unconstitutional under the British North America Act. In explaining their position the Premiers state that the consideration of unusually grave and complicated questions, constitutional, financial and legislative, are involved, and that unless the British North America Act is amended to give them the powers already alluded to, the Government ownership of elevators might "fail and prove futile, and possibly be followed with disastrous results."

In this decision there is no doubt the Premiers have, to a certain extent, side-stepped the question, as there is no absolute proof that a complete monopoly of the powers specified is necessary, and indeed the Grain Growers' Association stoutly maintain that it is not. But outside the ranks of the more rabid of the grain growers it is not likely that the Premiers will be at all severely criticised for at least gaining time for a more full and lengthy discussion of the whole question.

It is not to be supposed for a moment that the question has been disposed of, but at least it has been given a hoist that will give time for the collating, sifting and discussing of evidence in connection with such a project before the country is committed to costly and perhaps wholly impractical legislation whereby existing trade relations with Great Britain might be seriously impaired.

Mills and Flour Trade.

The Saskatchewan Flour Mills Company, of Moosejaw, opened their new mill during the past week and the event was marked by a grand banquet tendered by the Board of Trade to the owners and employees of the mill. Up to the present time Moosejaw has had a mill with a 200 barrel capacity. This was bought out by the present company and practically rebuilt into a splendid modern 1,000 barrel mill. There are two elevators in connection with it, with a combined capacity of 175 to 180 thousand bushels. In addition to the mill proper there is a fine modern packing house and oatmeal mill.

The enormous number of homesteads taken up in the Moosejaw district during the past year, and the general increase in wheat growing on the Moosejaw plains indicates the possibilities of Moosejaw as a milling centre, so that the opening of the present mill is not only regarded as important in itself, but also as an augury for the future.

The Western Canada Flour Mills, Ltd., had its new issue of stock officially listed on the London Stock Exchange, and a large portion of the £225,000 six per cent. first mortgage 20 year sinking fund sterling bonds have been taken by British investors.

Movement of Real Estate.

The most important real estate transaction of the week was the purchase by T. D. J. Farmer, of Hamilton, Ont., of 98 feet on the east side of Main Street, immediately south of the site on the southeast corner of Portage Avenue and Main Street, recently acquired by the Bank of Montreal for their new western headquarters. The property bought by Mr. Farmer is at present occupied by the O'Connor Hotel, a very ramshackle place, but quite a famous hostelry of the olden days. The Bank of Montreal are getting out most elaborate plans for their new building, and as soon as these are completed and the style of the building definitely decided upon, Mr. Farmer will have plans drafted for an office building, to be erected on his property, that will be, in all essentials, in keeping with the bank building and also with the National Trusts building which bounds his property on the south. The property purchased by Mr. Farmer has a depth of 155 feet to a lane. The price paid for the property was $2,000 per front foot, or a total of $196,000.

Range Cattle in Good Shape.

Mr. Ryan, of Ryan & Fares, has just returned from an extended trip returned from from an extended trip through Alberta and reports that he has never seen the range cattle and horses looking better. The fall and early winter were ideal for stock and they got as fat as butter. At the time of the extreme dip in the first week in January there was no snow to cover up the feed and the cattle sought sheltered places and took no harm. Since that time the weather has been as mild as spring and the cattle are in a thrifty and altogether satisfactory condition.

Mr. Ryan, who is an old westerner, states that never in his experience has he seen so many settlers come in in January. Many of those arriving are Americans who come in over the Soo Line by way of Moosejaw, many of them are going into that district and the districts round Maple Creek and Crane Lake.

Wheat Market.

The market has held strong all week with a decided increase in export trade especially for May and June delivery. Low grade wheat have been principally in demand for this trade, but Ontario millers are good buyers of contract wheat. Receipts continue to be very light, in spite of the mild weather which prevailed up to Friday morning the 29th when there was a sudden drop in temperature.—H.

Hardware Markets.

January proved to be a very satisfactroy month, with the hardware trade. The volume of business with the wholesale houses was considerably in excess of last year, and there has been a satisfactory improvement in country collections. Stocks in the country are low, business is on a sound basis, and everything points to a record year.

Stocktaking has been the order of the day with several wholesale houses, and, as is usual after the first of the year, there has been a general revision of prices in several lines of goods. A number of changes of more or less importance are noted below:

Price Quotations.

WIRE—Barbed wire, 100 lbs., $3.15; plain twist, $3.40; staples, $2.90; annealed wire, $2.90 base; oiled, 10c extra; bright iron, $3.10 base; brass spring wire, 29c base; plain galvanized, wire, 6, 7, and 8, $3.50; No. 9, $3.10; No. 10, $3.60; No. 11, $3.70; No. 12, $3.30; No. 13, $3.40; No. 14, $4.25; No. 15, $4.75; No. 16, $5.

POULTRY NETTING—57½ per cent.

HORSESHOES—Iron, No. 0 to No. 1, $4.50; No. 2 and larger, $4.25, snowshoes, No. 0 to No. 1, $4.75, No. 2 and larger, $4.50; steel, No. 0 to No. 1, $4.85, No. 2 and larger, $4.60; featherweight, $6.00.

HORSENAILS—MRM, cold process—No. 3, $4.30; 4, $3.80; 5, $3.55; 6, $3.30; 7, $3.05; 8, $2.85; 9, $2.75; 10, 11 and 12, $2.65 in 25-lb. boxes.

MANUFACTURE OF GUNPOWDER.

At one time a large part of the potassium nitrate used in the manufacture of gunpowder was obtained from natural and artificial nitre beds, by leaching out the nitre which formed on the surface of stones and rubbish exposed to humidity and sprinkled with liquid excrement. During the wars of the French Revolution and Empire, when it was impossible to import nitre from India, artificial nitre beds were established in every part of France. The Committee of Public Safety published instructions concerning their operation and Fourcroy devoted many pages to them in the Encyclopedia. This crude process is now being revived, after having been abandoned for a century. Muntz and Bazin have taken out patents for a method by which farmers can produce for their own use fertilizers rich in nitrates, which may be substituted for Chile saltpeter, which is increasing in price year by year. The process differs very very little from that of older times, except that stones and rubbish are replaced by peat, which is peculiarly well adapted for nitrification, very cheap and naturally rich in nitrogen. Advantage has also been taken of the discoveries of bacteriologists in regard to the properties and functions of nitrifying microbes. Dry peat is ground and mixed with one-tenth of its weight of chalk, half its weight of water and a little phosphate of lime. The mixture is placed in a bed about three feet deep, in a building where the temperature can be kept constantly at about 70 or 75 deg. F. The bed is then sprinkled with a solution of ammonium sulphate or any other ammoniacal liquid, such as sewage, factory waste, liquid manure, or the ammoniacal liquor of gas works. Within one month all the ammonia is converted into nitrate. The mixture can then be either used directly as a fertilizer or leached for the extraction of the nitre, which can be purified and sold for industrial purposes.

A BRIDGE OF SCYTHES.

A hardware dealer fixed up an effective advertisement in his window the other day that attracted a good deal of attention. Six long curved scythes were placed over a mirror so as to make a convex bridge. The mirror gave the appearance of water. A cardboard sign dangled temptingly above bearing this legend: "A bridge of scythes. Buy them here."

How We Safeguard Sherwin-Williams Varnishes.

Messrs. Barry & Butler,
Allentown, P. Q.

Gentlemen:-

In your recent letter you asked if Sherwin-Williams Varnishes were any better than other varnishes which sell for a cheaper price. You can be assured they are. This is due to the following reasons:

We take unusual care in the selection of varnish gums. We make all the linseed oil used in our varnishes, and as explained to you in one of my recent letters we have been successful in producing a much better oil than the ordinary commercial linseed oil. We use the greatest care in cooking the varnish at just the right temperature and for just the right length of time for each particular grade. We filter, not only the high priced varnishes, but every grade we make. All of our varnishes are thoroughly aged. We never allow filtering to take the place of aging, as some manufacturers do. Rigorous tests are then applied, and no varnish is ever allowed to go out unless it measures up to the Sherwin-Williams standard in every respect.

If I can give you any further information please let me hear from you.

Yours very truly,
C. C. BALLANTYNE.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal waterworks and sewerage systems, railway or mining news, etc.

Industrial Activity.

Ambrose Eisenhaur is building a carriage factory in Mahone Bay, N.S.

Shipyards costing $500,000 will be built this spring at Sault Ste. Marie.

The Rowden Manufacturing Co. will build a furniture factory in Guelph.

The Lewis Miller Co. will probably build a large sawmill at Jordan Falls, N.S.

The Dawson Lumber Company's mills at Yarmouth, N. S., are resuming operations.

George White & Sons' agricultural implement works, London, are to be enlarged.

The Dominion Copper Co. propose to resume operations before the end of the month.

The Canadian Potato Machinery Co., a branch of the Champion Potato Machinery Works, Hammond, Ind., has bought land and will erect works at Galt.

Seaton Bros., New Westminster, B.C., have purchased the Crane shipbuilding yards and will immediately carry out improvements by opening a machine shop and wood-working plant.

The Dain Manufacturing Co. will establish a Canadian plant adjoining Welland, for the manufacture of farm implements, and a plant costing $250,000 will be erected, as well as 100 houses for workmen.

Municipal Undertakings.

Sarnia is considering instaling a civic steam heating plant.

Point Grey, a suburb of Vancouver, proposes to introduce a water and sewerage system.

The Hull waterworks are to be extended. New hydraulic pumps will be installed and a new main laid.

City Engineer Ruttan, of Winnipeg, recommends a new softening plant for the waterworks at a cost of $150,000.

The by-law to establish a waterworks system in Aylmer resulted in the ratepayers deciding to undertake the improvement.

Price Ellison has offered to put in a water system at Vernon, B.C., for $35,000, which will give unlimited water and reduce electric light rates.

The town council of Notre Dame de Grace decided to purchase the property of the company which supplies water to the municipality. Henry Miles is the seller of this property, and the price named is $292,000. The supply of water is taken from Lake St. Louis, and the power house is situated at Lachine, south of the canal. The pumps furnish 1,500 gallons per minute and supply not only the municipality of Notre Dame de Grace, but also Montreal West and St. Pierre.

It is stated that the dredging of the Carp river will be commenced at the earliest possible date this season. The scheme is the largest drainage proje ever undertaken by the county and will begin a short distance from Hazeldean, Ont., and extend nearly twelve miles to about a mile and a half west of the village of Carp. The estimated cost is $28,000.

Willis Chipman, C.E., Toronto, has reported to the Weston Town Council in reference to the establishment of a system of waterworks. Mr. Chipman recommends an expenditure of $57,000 on the installation of a system, the source of supply to be the Humber River, the water of which is to be pumped into sedimentation basins, thence through mechanical filters and on to a supply tank to be erected at the north end of the village, with a capacity of 100,000 gallons.

Railway Development.

Building will be rushed on the G.T.P. main line this summer.

The entry of the Great Northern into Winnipeg will necessitate the erection of new terminals.

Work has begun on the construction of the E. & N. extension from Wellington to Alberni, B.C.

The G.T.P. is planning to build branch lines into East Kootenay and the Crow's Nest Pass country.

Tenders will be received by the commissioners of Calgary for material for the street railway until February 18.

The Canadian Pacific Railway has ordered 20,000 tons of rails from the Algoma Steel Co. at Sault Ste. Marie.

The Great Northern will spend $3,000,000 at Vancouver this year erecting terminals.

The Pacific Northern & Omineca Railway are applying to the B.C. legislature for amendments to their charter giving the company power to construct and operate a line of railway from the junction of the Bulkley and Telkway Rivers.

The Dominion Parliament will be asked next session for an act incorporating a company to construct a railway from Victoria, B.C., by way of Otter Point and San Juan to Barclay Sound, near Sarita River, such railway to be declared to be for the general advantage of Canada.

James A. Ross, president of the Dunnville, Wellandport & Beamsville Electric Railway, states that plans have been made to begin construction this spring. The road will extend from Dunnville through Wellandport to Beamsville, a distance of 23 miles. A by-law has been recently passed by Dunnville granting a bonus of $15,000.

Application will be made next session of the Dominion Parliament for an act authorizing the Alberta Central Railway to construct extensions of its projected railway from its westerly terminus near Rocky Mountain House to the G.T. Pacific Ry. in or near the Yellowhead Pass; easterly from the terminus near the elbow of the Battle River to or near Saskatoon or Warman, Sask.; and from the main line east of Red Deer, Alta., southerly and easterly to Moose Jaw, Sask.

The Vancouver, Westminster & Yukon Railway, and the Burrard, Westminster, Boundary Railway & Navigation Company will apply the coming session of the federal house for power to amalgamate, and to build and operate electric railroads from Vancouver to New Westminster, thence to Port Moody and westward to connect with the proposed second narrows bridge, coming on to Vancouver and completing the circuit. Also across the bridge east and west through North Vancouver and beyond. Other branches planned are from the Fraser River bridge at New Westminster to the international boundary; from Vancouver through Point Grey and also from Port Moody east to Mission.

General Manager McLeod, of the Canadian Northern, states that the company will make large additions to the terminal facilities at Port Arthur. Some are definitely arranged and others are in contemplation. To increase the freight storage capacity at the docks a shed is now being built over the steel dock. A new dock is to be built just south of the present dock, and on it work will be started as soon as feasible. It will be used as a steel dock during the early summer and for freight when the fall rush commences. New tracks will be laid through the yards, including lines to the new elevator to be built by Piper & McWilliams.

Public Buildings.

Point Grey, B.C., will erect a municipal hall.

Calgary Presbyterians will build a new $7,000 church.

A new church will be erected at Lakeview, near St. Thomas.

A new $4,600 school will be built at Yarmouth Heights, near St. Thomas.

Beaverton and Thorah councils will erect a joint town hall to cost $12,000.

The new $200,000 Collegiate Institute proposed for Winnipeg will be built this year.

St. Matthew's Anglican congregation, Brandon, will erect a new and larger church.

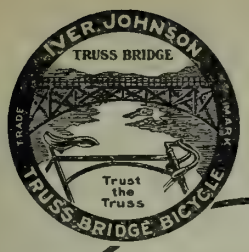
Two new wings to cost $70,000 will be added to the Home for Incurables at Toronto.

J. G. and E. Y. Lightheart, Vancouver, will spend $15,000 on a block of dwellings.

A new transportation building to cost $86,000 will be built on the Exhibition grounds, Toronto.

The Canadian Pacific Railway will rebuild their station at Bristol, N.B., at an estimated cost of about $3,000.

Gregoire & Audet, Sherbrooke, Que., are preparing plans for the erection of a new parish church to cost $15,000, at North Hatley, Man.



Dealers Everywhere
find the Iver Johnson Truss Bridge frame a tremendous selling argument.
It means long life to the bicycle. A rigid frame preserves perfect alignments of all running parts. Saves wear and tear. Makes an easy running machine.

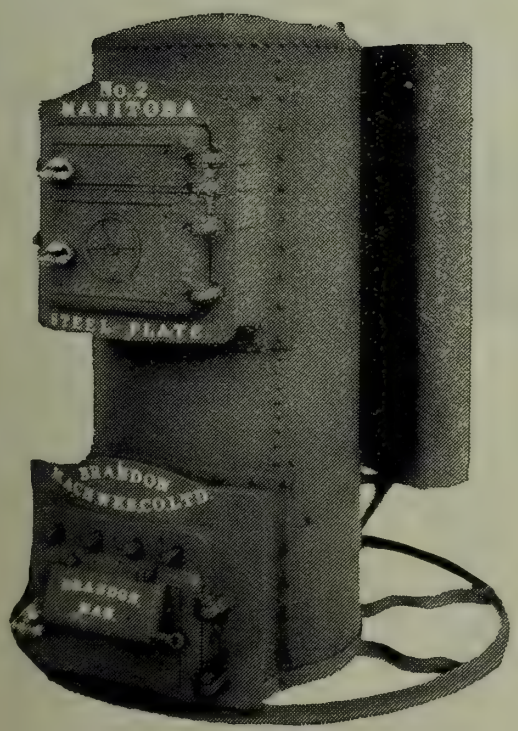
Men Who Sell Things

By Walter D. Moody

Technical Book Department - - 10 Front Street East

The Condensed Ads. in Hardware and Metal bring results. Try one.



We Want Agents

to sell the

Manitoba Steel Plate Furnace

We want a good hardware man in every town to handle our furnace. It will burn Souris and other soft coals mined in the West, and it will burn them economically. It is the furnace Western people have been looking for. If you are from Missouri, so much the better. Ask us and we will show you.

The consumer saves 25 to 40 per cent. on fuel when he uses the Manitoba.

The Brandon Machine Works Co., Limited

Brandon, Manitoba

Tenders will be called immediately for the erection of the new Provincial Asylum for the Insane, to be erected at New Westminster.

General Building Notes.

D. T. Symons will erect a dwelling at Toronto to cost $11,000.

J. D. MacArthur, Winnipeg, will erect a magnificent office building in the near future.

The Imperial Storage and Cartage Co. will build a $20,000 storage warehouse at Toronto.

Thirty-eight building permits, valued at $111 600, were issued in Toronto during the last week of January.

Building operations at Prince Albert will be active this year. R. T. Goodfellow is erecting a new business block; T. Baker will build a block of stores; the Imperial Bank will put up a new building ing, and D. Agnew, A. Holmes and G. W. Baker are erecting new stores.

New Companies.

Blairton Iron Mines, Toronto ; capital, $40,000 ; to crush ores, etc. Incorporators, J. L. Ross, A. W. Holmsted, T. A. Silverthorn, all of Toronto.

Continental Oil Co., Winnipeg, capital, $50,000 ; to carry on wholesale and retail oil business. Incorporators, T. Anderton, E. Liebel, J. Anderton, all of Oil City, Pa.

Filters, Ltd., Toronto ; capital, $40,000 ; to manufacture filters and contrivances for purifying water. Incorporators, W. H. Warrington, N. B. Darrell, J. R. L. Starr, all of Toronto.

The Waste Products Refining Co., West Toronto ; capital, $35,000 ; to manufacture and clean engine waste and make oils, paints, etc. Incorporators, G. H. Bostock, J. F. Mitchell, R. J. Richardson, all of Toronto.

Producer Gas Construction Co., Toronto ; capital, $200,000 ; to manufacture oil and gas machines and devices for use of light, heat and power. Incorporators, H. R. Ivor, J. R. L. Starr, J. H. Harvey, all of Toronto.

Ben Hur Truck Co., Hamilton ; capital, $20,000 ; to manufacture hand trucks, furniture, boxes, metals, plated ware, wheels, etc. Incorporators, F. R. Close, W. M. Findlay, T. A. Henderson, C. H. Snyder, all of Hamilton.

Watt Hose and Pipe Coupling Mfg. Co., Woodstock; capital, $100,000; to manufacture couplings, nuts, screws, brass goods, machinery, and hardware specialties. Incorporators, W. J. Watt, G. E. Phillips, J. A. McDonald, all of Woodstock.

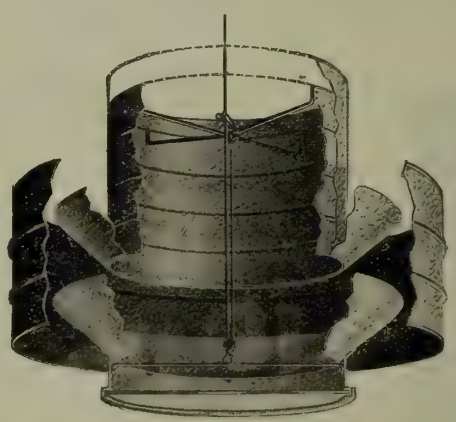
Novelties for the Hardwareman

THE BURT VENTILATOR.

Geo. W. Reed & Co., Montreal, have placed on the Canadian market the Burt ventilator, for which they are the sole manufacturers for Canada, a patent which has been extensively used in the United States with most satisfactory results.

It is now generally realized that the ventilation of workshops, public buildings and other large structures, is of the utmost importance, especially in a country like Canada, where for so long a period it is necessary to close buildings up tightly. To effect a proper means of ventilation it is necessary to provide some simple method, with easy means of adjustment, of permitting the escape of foul air. The Burt ventilator, it is claimed, completely fulfils these requirements, and not only that, but it is so constructed that even in calm weather it will be effective in drawing impure air from the building.

With its glass top feature, the Burt is not only a ventilator, but a skylight as well, a very great advantage to many buildings, and furthermore, the ventilator by menas of the patented sliding sleeve damper, can be closed without obstructing the passage of daylight, a most important point. The construction of this damper is such that it in no way obstructs the air shaft, and by means of a patented clip can be adjusted to



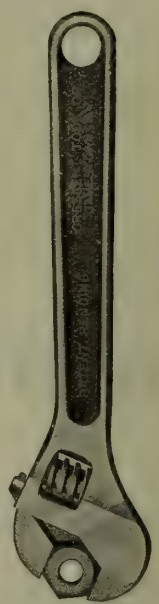
The Burt Ventilator.

any desired degree of opening without having to tie the cord.

The cut we give shows the construction of the glass top ventilator. The top is heavy wired glass, which is set in a groove, and made absolutely watertight. Below the glass is a trough into which runs any condensed water, small holes permitting passage to the outside of the ventilator. The Burt is made with a metal top instead of glass, when required.

A NEW ADJUSTABLE WRENCH.

The Crescent adjustable wrench, manufactured by Crescent Tool Co., Jamestown, N.Y., is made after a new design which is neat, campact and original. The wrench is in two sizes, each of them having a polished and nickel-plated finish. The handle is of hardened steel and the movable jaw made of special alloy steel, is of great strength. The adjustment of the opening is easily made with one hand holding the wrench, and a small spring washer retains the adjustment when set. Its compactness permits this wrench to be used in any place



Crescent Adjustable Wrench.

where a solid wrench can be used, besides being able to be adapted to a great many sizes not permissible in the solids. Each wrench before being sent out is subjected to a rigid test.

ASBESTOS SLATES FOR ROOFS.

A firm in Germany has succeeded in artificially rendering asbestos waterproof and has put upon the market a product known as asbestos slates, which are thus described: "These asbesto slates, it is claimed, are as hard and as strong as the natural slates, and can therefore be laid on wall or roof constructions without any wooden laths being necessary. They are very easily worked, and can be bored, nailed, and cut just like wood, without any danger of splitting. They form a fireproof covering for inside and outside wooden walls, are valuable for insulation work of all kinds, even for electrical purposes; are of great use in building carriages as insulating material under the seats, for use in postal telegraphic work for insulating switches; for covering iron and wooden constructions; for use as fireproof doors for closing off single rooms in stores, warehouses, etc.; for lining wooden doors, and for covering walls and ceilings of all kinds so as to protect them from fire, heat, cold, dampness, disease, germs and vermin."

News of the Paint Trade

THE MISUSE OF PAINTS.

As it is only in human nature for fault to be found occasionally with the best article made, the hardwareman must be prepared to have fault found every now and then with the paints that he handles. No article can stand being misused, and especially is this the case with paint applied with inexperienced hands. Some users seem to think that no care or intelligence is needed in painting. All that is necessary is to buy a tin of paint at the hardwareman's and take the first fine day to paint the fence, barn, porch or whatever it may be. No regard is given to the character of the surface. The old paint may be peeling off, the surface may be sooty or greasy, or the paint may be poured on with lavish hands. And then when the paint is found to be peeling, or generally looks unsatisfactory, the paint is blamed and the poor hardwareman condemned for selling such inferior stuff.

Deal With Complaints Promptly.

If such cases do not come to the ear of the hardwareman, then, of course, he cannot cope with them, and any damage that is done to his trade he must put down to the undeserved knocks that every man in business has to contend with. But if any customer comes into the store with a complaint, or the dealer has heard word of any complaint, then he should lose no time in dealing with the matter promptly. The dissatisfaction of a customer is liable to spread and prevent other people from coming into the store.

Investigate all complaints at once. Of course, if the customer is found to be correct in his fault finding, nothing can be done, but to offer an apology, and to make good either by refunding the purchase money, supplying another brand of paint, or by having the painting done again at the store's expense. Furthermore, the dealer should have a good and satisfactory explanation from the manufacturer, or take in a fresh brand altogether. If, however, the dealer is stocking a reputable brand, he can depend upon the quality of the paint, unless any fault has crept in unbeknown to the manufacturer. When the dealer sees, after an investigation, that the customer is at fault, he should tell the latter so, but in a good-humored way, so that the customer is not irritated. He should explain to the customer the absolute necessity of taking care that the surface is in fit condition, and that the paint is correctly applied, and, no doubt, in most cases, the answer to any question along these lines would be that the user did not worry about the surface, thinking that paint applied liberally would cover anything and look well afterwards. An explanation as to the foolishness of this procedure will put the customer in good shape, and uphold the reputation of the store's goods.

Simple Painting Directions.

It would be well for the dealer to anticipate such mistakes by having certain

We'll help you sell them

When you stock Floorglaze Enamel, M.L. Paints, or anything else we make, our interest in you doesn't lapse till it's time for your next order. Not much! We keep busy right along helping you to sell the goods—moving that stock out in a hurry to make room for more. That's one reason why we keep friends with the trade. Another reason is found inside the cans. When you get ready to handle a really complete line of paints, varnishes, enamels, etc.,—and a line that sells and satisfies—this is the address to write to:

Imperial Varnish & Color Co., Ltd.
OF TORONTO

Please correspond with place nearest you.

All our lines carried in full assortment by Imperial Varnish & Color Co., Ltd., 542 Beatty St., Vancouver; Mason & Hickey, 108 Princess St., Winnipeg, Man.

HORSE NAILS

That "M.R.M." Horse Nails are giving satisfaction is proved by the fact that our sales last year were double those of the previous one.

The best farriers of the country recognize that "M.R.M." brand Nail fully meets the demands made upon it, as far as quality is concerned, and can be bought at a reasonable price.

A stock of these Nails is essential in the up-to-date Hardware Store.

The Montreal Rolling Mills Co.

simple directions hung prominently in his store. The clerks should also be instructed to impart these instructions where they think it is necessary. Probably the best plan is to have a printed slip containing directions, similar to the following, wrapped up in each parcel; the expense would not be much, and the benefit very great.

See that the surface is free from grease and soot. If the job has been previously painted and is peeling, scaling off, or cracking, burn off all the old paint. If this is not done, the new coat of paint cannot be expected to stick.

See that the surface is perfectly dry. Moisture is what often causes blistering, cracking, scaling and like troubles. Moisture is always present in green or pitchy lumber, and after a rain, a heavy dew or a fog.

Do not paint over pitchy surfaces and expect satisfactory results. No paint can do well on such surfaces.

Do not paint in frosty weather or over too glossy a surface. Any paint will "crawl" under such conditions.

It is false economy to use only two coats of paint on new work. Don't expect best results unless you use a primer and two subsequent coats.

Apply the paint in thin coats. Brush it out thoroughly. Any paint put on too thick is liable to crack and peel, and such workmanship is responsible for more unsatisfactory results than any other one cause.

Do not let one coat of paint stand for any length of time before applying the next coat and expect good results after becoming thoroughly dry. Each coat must be applied one after the other within reasonable time if long wear is expected.

With such directions the most inexperienced user cannot go far wrong. The plan is worth the consideration of the hardwareman who wants to counteract the misuse of his paints and the creation of uncalled for complaints as to the quality of his brand.

LABELS FOR PAINTS.

G. B. Heckel, editor of Drugs, Oils and Paints, Philadelphia, has written the following letter to the Iron Age, it being particularly interesting at this time when retail hardware association conventions are being held in the various States. He writes:

I have learned with much surprise that some of the Retail Hardware Associations, especially in the Middle West, are enthusiastically promoting the idea of paint legislation, requiring the publication of the formula on the label. The gentlemen concerned probably know why they have adopted such an attitude, but to an outsider it is incomprehensible. It is as surprising as if these associations should decide that the mail order houses are a beneficent institution and should be encouraged by legislation.

On the face of it and at first sight the requirement of formula labels appears a natural and easy way of ending certain abuses which undoubtedly exist in the paint trade, as they have always existed and always will exist in all lines of industry open equally to all classes and conditions of men. But before we apply a new remedy it is well to know something of its nature and effects. The formula label on a paint can tells what a paint is made of, not how or how well it is made, or how carefully nor with what practical knowledge these ingredients have been selected and combined. Therefore, th formula does not actually indicate the value of the paint as paint.

Waiving the question of justice regarding laws which compel the manufacturer to publish without compensation the results of a lifetime of labor, thought and investment, let us ask how the paint dealer, the hardwareman, will be affected by the publication of the formula.

Effect of Law on Merchants.

Nearly every dealer makes a specialty of some one brand of paint. It has probably given satisfaction to his trade or he would not continue to handle it. Its popularity and continued sale depend upon the satisfaction it has given, the advertising support the manufacturer accords it, and the relative price at which it is sold. Now let us suppose that in any given State all paints must bear the formula label. This means that the ingredients, but not necessarily the quality, of the paint can be duplicated by any one. Quality, however, is something that does not show in the formula. What is to prevent any "Cheap Jack" with a paint mixer from offering to duplicate, at a cut rate, the formula of the paint handled by any dealer? This has already happened on a scale that will increase as time goes on, in every State that has thus far adopted the formula labeling idea. If the dealer will not "bite" at the proposition, those manufacturers will go direct to the householder with their proposition, and with a parcel post law to help them there will be little left of the paint trade in a few years.

There is another danger in this programme which appears to be generally overlooked. That is the inevitable tendency of such laws to reduce paint to a commodity basis, like nails, fence wire, white lead, etc. Any dealer knows that his profits are made on trademarked, advertised articles, and that without these he could not continue in trade. Is it not suicidal for him to join in a movement which is sure to remove another of his specialties from the latter into the former class?

Will Eliminate Small Manufacturers.

I pass over the inevitable tendency of such legislation to eliminate the small manufacturer and to force consolidation of the larger houses into trusts. I pass also over the inequity of singling out one industry for such an experiment while cloth manufacturers, leather and shoe manufacturers, manufacturing jewelers, hardware manufacturers, etc., are left undisturbed. If the present tendency continues unchecked the turn of
